Lunar Wake:

Magnetotails in the Solar System Andreas Keiling, Caitríona Jackman, Peter Delamere, 2015-02-02 All magnetized planets in our solar system Mercury Earth Jupiter Saturn Uranus and Neptune interact strongly with the solar wind and possess well developed magnetotails It is not only the strongly magnetized planets that have magnetotails Mars and Venus have no global intrinsic magnetic field yet they possess induced magnetotails Comets have magnetotails that are formed by the draping of the interplanetary magnetic field In the case of planetary satellites moons the magnetotail refers to the wake region behind the satellite in the flow of either the solar wind or the magnetosphere of its parent planet The largest magnetotail of all in our solar system is the heliotail the magnetotail of the heliosphere The variety of solar wind conditions planetary rotation rates ionospheric conductivity and physical dimensions provide an outstanding opportunity to extend our understanding of the influence of these factors on magnetotail processes and structures Volume highlights include Discussion on why a magnetotail is a fundamental problem of magnetospheric physics Unique collection of tutorials on a large range of magnetotails in our solar system In depth reviews comparing magnetotail processes at Earth with other magnetotail structures found throughout the heliosphere Collectively Magnetotails in the Solar System brings together for the first time in one book a collection of tutorials and current developments addressing different types of magnetotails As a result this book should appeal to a broad community of space scientists and it should also be of interest to astronomers who are looking at tail like structures beyond our solar system

The ARTEMIS Mission Christopher Russell, Vassilis Angelopoulos, 2013-11-18 The ARTEMIS mission was initiated by skillfully moving the two outermost Earth orbiting THEMIS spacecraft into lunar orbit to conduct unprecedented dual spacecraft observations of the lunar environment ARTEMIS stands for Acceleration Reconnection Turbulence and Electrodynamics of the Moon's Interaction with the Sun Indeed this volume discusses initial findings related to the Moon's magnetic and plasma environments and the electrical conductivity of the lunar interior This work is aimed at researchers and graduate students in both heliophysics and planetary physics Originally published in Space Science Reviews Vol 165 1-4 2011

Interactions of Earth's Magnetotail Plasma with the Surface, Plasma, and Magnetic Anomalies of the Moon Yuki Harada, 2014-08-18 This thesis describes the essential features of Moon plasma interactions with a particular emphasis on the Earth's magnetotail plasma regime from both observational and theoretical standpoints The Moon lacks a dense atmosphere as well as a strong intrinsic magnetic field As a result its interactions with the ambient plasma are drastically different from solar wind interactions with magnetized planets such as Earth The Moon encounters a wide range of plasma regime from the relatively dense cold supersonic solar wind plasma to the low density hot subsonic plasma in the geomagnetic tail In this book the author presents a series of new observations from recent lunar missions i.e Kaguya ARTEMIS and Chandrayaan 1 demonstrating the importance of the electron gyro scale dynamics plasma of lunar origin and hot plasma interactions with lunar magnetic anomalies The similarity and difference

between the Moon plasma interactions in the geomagnetic tail and those in the solar wind are discussed throughout the thesis The basic knowledge presented in this book can be applied to plasma interactions with airless bodies throughout the solar system and beyond Nuclear Science Abstracts ,1970 **New View of the Moon 2** Clive R. Neal,Lisa R. Gaddis,Bradley L. Jolliff,Samuel J. Lawrence,Stephen J. Mackwell,Charles K. Shearer,Sarah N. Valencia,2024-05-06 Much has happened in the world in the 17 years since the first New Views of the Moon was published as volume 60 of the Mineralogical Society of America in 2006 An exciting new era of lunar exploration has begun including the promise of resuming human lunar exploration exploring the lunar Poles and missions to many other high priority science targets It is fitting therefore to now summarize the current state of knowledge to the degree possible at a time when advancements in knowledge of the Moon are proceeding at a breakneck pace Therefore during this period of unprecedented lunar exploration activity and as we continue to rebound from a global pandemic we now happily announce this New Views of the Moon 2 volume summarizing the advances in lunar science and exploration since 2006 The Steering Committee is eternally grateful to all contributors and especially the chapter leads and to Professor Makiko Ohtake University of Aizu Japan and Dr David Blewett Johns Hopkins University Applied Physics Laboratory U S A for organizing the New Views of the Moon 2 Electronic Annex We deeply appreciate the hard work and dedication of everyone involved in the production of this volume especially Rachel Russell and Ian Swainson at the Mineralogical Society of America This volume helps to frame our knowledge and expectations for an exciting future of lunar science and exploration and the new discoveries to be made Having humans return to the Moon now seems more likely than it ever has since the last humans left the Moon on 14 December 1972 *The Interplanetary Medium* E.R. Hundhausen,2012-12-06 **Publications of Goddard Space Flight Center** Goddard Space Flight Center,1964 *Electric Currents in Geospace and Beyond* Andreas Keiling,Octav Marghitu,Michael Wheatland,2018-05-08 Electric currents are fundamental to the structure and dynamics of space plasmas including our own near Earth space environment or geospace This volume takes an integrated approach to the subject of electric currents by incorporating their phenomenology and physics for many regions in one volume It covers a broad range of topics from the pioneers of electric currents in outer space to measurement and analysis techniques and the many types of electric currents First volume on electric currents in space in over a decade that provides authoritative up to date insight on the current status of research Reviews recent advances in observations simulation and theory of electric currents Provides comparative overviews of electric currents in the space environments of different astronomical bodies *Electric Currents in Geospace and Beyond* serves as an excellent reference volume for a broad community of space scientists astronomers and astrophysicists who are studying space plasmas in the solar system Read an interview with the editors to find out more <https://eos.org/editors-vox/electric-currents-in-outer-space-run-the-show> **Low-Frequency Waves in Space Plasmas** Andreas Keiling,Dong-Hun Lee,Valery Nakariakov,2016-04-04 Low frequency waves in space plasmas have been studied for several

decades and our knowledge gain has been incremental with several paradigm changing leaps forward In our solar system such waves occur in the ionospheres and magnetospheres of planets and around our Moon They occur in the solar wind and more recently they have been confirmed in the Sun s atmosphere as well The goal of wave research is to understand their generation their propagation and their interaction with the surrounding plasma Low frequency Waves in Space Plasmas presents a concise and authoritative up to date look on where wave research stands What have we learned in the last decade What are unanswered questions While in the past waves in different astrophysical plasmas have been largely treated in separate books the unique feature of this monograph is that it covers waves in many plasma regions including Waves in geospace including ionosphere and magnetosphere Waves in planetary magnetospheres Waves at the Moon Waves in the solar wind Waves in the solar atmosphere Because of the breadth of topics covered this volume should appeal to a broad community of space scientists and students and it should also be of interest to astronomers astrophysicists who are studying space plasmas beyond our Solar System

Collisionless Shocks in the Heliosphere Robert G. Stone, Bruce T. Tsurutani, 1985 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 35

Violent expansions of the solar corona cause transient shock waves which propagate outward from the sun at hundreds to thousands of kilometers per second simple solar wind velocity gradients at the surface of the sun lead to high speed streams overtaking slower streams forming corotating shocks and steady state supermagnetosonic solar wind flow past objects such as the planets lead to standing bow shocks However the solar wind plasma is so hot and tenuous that charged particle Coulomb collisions produce negligible thermalization or dissipation on scale sizes less than 0.1 AU The irreversible plasma heating by these shocks is accomplished by wave particle interactions driven by plasma instabilities Hence these shocks are described as collisionless
