Human Genetics Ruth Porter, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Tumor Antigenicity and Approaches to**

Tumor Immunotherapy David W. Weiss, 1980-02 This volume is not intended as review of the large literature on tumor antigenicity and efforts at tumor immunotherapy Its purpose rather is to present discursively an outline of the likely approaches to immunological intervention in neoplastic diseases which present themselves today in light of the probable antigenic properties of cancer cells References are cited only selectively in illustration of some of the major considerations to which allusion is made and of some of the supportive evidence No attempt is made at inclusiveness in the citation of concepts and findings If undue emphasis appears to be given to some aspects of the literature and only sparse documentation to others the grounds do not lie necessarily with a critical estimation of the extent or quality of reported work but rather with the bias of the writer who considers stress on some facets of the field more appropriate than on others for elaboration of his arguments The references brought in support of a given point are often intentionally varied including both reports of original work and reviews very recent observations and contributions that gave initial impetus to investigations in an attempt to exemplify the pertinent literature and reference is made both to data presented and to concepts advanced *Superantigen*

Protocols Teresa Krakauer, 2008-02-05 Leading researchers in the biological chemical and physical investigation of superantigens describe in step by step detail their best experimental techniques to assess the physical characteristics and biological effects of superantigens Their protocols range from those for investigating the interactions of superantigens with cellular receptors to those for the analysis of their immunological and biological effects including methods for using BIOcore to determine binding kinetics and establishing various lymphocyte cell culture systems There are also accounts of such methods as the RNase protection assay cytokine ELISA FACS analysis and cytokine production at the single cell level
