Mathematical Scattering Theory Operator Theory Advances And Applications:

Operator Theory, Systems Theory and Scattering Theory: Multidimensional Generalizations Daniel Alpay, Victor Vinnikov, 2006-03-30 This volume contains a selection of papers from experts in the area on multidimensional operator theory Topics considered include the non commutative case function theory in the polydisk hyponormal operators hyperanalytic functions and holomorphic deformations of linear differential equations Operator Theory Systems Theory and Scattering Theory will be of interest to a wide audience of pure and applied mathematicians electrical engineers and theoretical physicists

Scattering Theory for Transport Phenomena Hassan Emamirad, 2021-06-27 The scattering theory for transport phenomena was initiated by P Lax and R Phillips in 1967 Since then great progress has been made in the field and the work has been ongoing for more than half a century This book shows part of that progress The book is divided into 7 chapters the first of which deals with preliminaries of the theory of semigroups and C algebra different types of semigroups Schatten von Neuman classes of operators and facts about ultraweak operator topology with examples using wavelet theory Chapter 2 goes into abstract scattering theory in a general Banach space The wave and scattering operators and their basic properties are defined Some abstract methods such as smooth perturbation and the limiting absorption principle are also presented Chapter 3 is devoted to the transport or linearized Boltzmann equation and in Chapter 4 the Lax and Phillips formalism is introduced in scattering theory for the transport equation In their seminal book Lax and Phillips introduced the incoming and outgoing subspaces which verify their representation theorem for a dissipative hyperbolic system initially and also matches for the transport problem By means of these subspaces the Lax and Phillips semigroup is defined and it is proved that this semigroup is eventually compact hence hyperbolic Balanced equations give rise to two transport equations one of which can satisfy an advection equation and one of which will be nonautonomous For generating the Howland semigroup and Howland's formalism must be used as shown in Chapter 5 Chapter 6 is the highlight of the book in which it is explained how the scattering operator for the transport problem by using the albedo operator can lead to recovery of the functionality of computerized tomography in medical science The final chapter introduces the Wigner function which connects the Schrödinger equation to statistical physics and the Husimi distribution function Here the relationship between the Wigner function and the quantum dynamical semigroup QDS can be seen

Mathematical Scattering Theory

Baumgärtel, Wollenberg, 2014-04-11 The aim of this book is to give a systematic and self contained presentation of the Mathematical Scattering Theory within the framework of operator theory in Hilbert space The term Mathematical Scattering Theory denotes that theory which is on the one hand the common mathematical foundation of several physical scattering theories scattering of quantum objects of classical waves and particles and on the other hand a branch of operator theory devoted to the study of the behavior of the continuous part of perturbed operators some authors also use the term Abstract Scattering Theory Essential contributions to the development of this theory are due to K FRIEDRICHS J COOK T KATO J M

JAUCH S T KURODA M S Berman M G KREIN L D FADDEEV R LAVINE W O AMREIN B SIMON D PEARSON V ENSS and others It seems to the authors that the theory has now reached a sufficiently developed state that a self contained presentation of the topic is justified *Operator Theory and Its Applications* Alexander G. Ramm, P. N. Shivakumar, Abraham Vilgelmovich Strauss, 2000 Together with the papers on the abstract operator theory are many papers on the theory of differential operators boundary value problems inverse scattering and other inverse problems and on applications to biology chemistry wave propagation and many other areas BOOK JACKET *Operator Theory and Interpolation* Hari Bercovic, Ciprian I. Foias, 2012-12-06 Systems and control theories use sophisticated operator theoretical methods They also provide new ideas and problems in operator theory As a consequence the biannual MTNS Mathematical Theory of Networks and Systems conference is attended by many operator theorists At the initiative of J W Helton and I Gohberg an International Workshop on Operator Theory and Applications IWOTA has been organized since the early 80s as a satellite of MTNS The articles in this volume originated from the IWOTA conference held at Indiana University Bloomington in June 1996 They represent most of the areas that were discussed at the workshop with some emphasis on modern interpolation theory a topic which has seen much progress in recent years The contributions were as usual subject to a thorough refereeing process and will bring the reader to the forefront of current research in this area *The Schur Algorithm, Reproducing Kernel Spaces and System Theory* Daniel Alpay, 2001 Looks at matrix valued Schur functions and their applications from the unifying point of view of space with reproducing kernels to study the relationship between the modeling of time invariant dissipative linear systems and the theory of linear operators Chapters cover reproducing kernel spaces theory of linear systems the Schur algorithm and the inverse scattering problem operator models interpolation the indefinite case the non stationary case and Riemann surfaces Originally published in French by Societe Mathematique de France 1998 Translated from the French by Stephen S Wilson Author information is not given c Book News Inc *Operator Theory, System Theory and Related Topics* Daniel Alpay, Victor Vinnikov, 2012-12-06 This volume presents the refereed proceedings of the Conference in Operator Theory in Honour of Moshe Livsic 80th Birthday held June 29 to July 4 1997 at the Ben Gurion University of the Negev Beer Sheva Israel and at the Weizmann Institute of Science Rehovot Israel The volume contains papers in operator theory and its applications understood in a very wide sense many of them reflecting a profound impact of the work of Moshe Livsic Moshe Mikhail Samuilovich Livsic was born on July 4 1917 in the small town of Pokotilova near Uman in the province of Kiev in the Ukraine his family moved to Odessa when he was four years old In 1933 he enrolled in the Department of Physics and Mathematics at the Odessa State University where he became a student of M G Krein and an active participant in Krein's seminar one of the centres where the ideas and methods of functional analysis and operator theory were being developed Besides M G Krein M S Livsic was strongly influenced by B Va Levin an outstanding specialist in the theory of analytic functions A by deep understanding of operator theory as well as function theory and a penetrating

search of connections between the two were to become one of the landmarks of M S Livsic's work M S Livsic defended his Ph D

Spectral Theory in Inner Product Spaces and Applications Jussi Behrndt, Karl-Heinz Förster, Heinz Langer, Carsten Trunk, 2009-01-21 Contains a collection of research papers originating from the 6th Workshop on Operator Theory in Krein Spaces and Operator Polynomials which was held at the TU Berlin Germany December 14 to 17 This work discusses topics such as linear relations singular perturbations de Branges spaces nonnegative matrices and abstract kinetic equations

Operator Theory, Analysis and Mathematical Physics Jan Janas, Pavel Kurasov, A. Laptev, Sergei Naboko, Günter Stolz, 2007-04-29 This volume contains lectures delivered at the International Conference Operator Theory and its Applications in Mathematical Physics OTAMP 2004 held at the Mathematical Research and Conference Center in Bedlewo near Poznan Poland The idea behind these lectures was to present interesting ramifications of operator methods in current research of mathematical physics

Operator Theory, Operator Algebras and Their Interactions with Geometry and Topology Raul E Curto, William Helton, Huaxin Lin, Xiang Tang, Rongwei Yang, Guoliang Yu, 2020-12-12 This book is the proceeding of the International Workshop on Operator Theory and Applications IWOTA held in July 2018 in Shanghai China It consists of original papers surveys and expository articles in the broad areas of operator theory operator algebras and noncommutative topology Its goal is to give graduate students and researchers a relatively comprehensive overview of the current status of research in the relevant fields The book is also a special volume dedicated to the memory of Ronald G Douglas who passed away on February 27 2018 at the age of 79 Many of the contributors are Douglas students and past collaborators Their articles attest and commemorate his life long contribution and influence to these fields
