Theoretical Foundations of Learning Environments David Jonassen, David H. Jonassen, Susan Land, 2014-04-08 Theoretical Foundations of Learning Environments describes the most contemporary psychological and pedagogical theories that are foundations for the conception and design of open ended learning environments and new applications of educational technologies In the past decade the cognitive revolution of the 60s and 70s has been replaced or restructured by constructivism and its associated theories including situated sociocultural ecological everyday and distributed conceptions of cognition These theories represent a paradigm shift for educators and instructional designers to a view of learning as necessarily more social conversational and constructive than traditional transmissive views of learning Never in the history of education have so many different theories said the same things about the nature of learning and the means for supporting it At the same time although there is a remarkable amount of consonance among these theories each also provides a distinct perspective on how learning and sense making occur This book provides students faculty and instructional designers with a clear concise introduction to these theories and their implications for the design of new learning environments for schools universities and corporations It is well suited as a required or supplementary text for courses in instructional design and theory educational psychology learning theory curriculum theory and design and related areas

Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska, Jeremy Kilpatrick, 2014-02-19 No one disputes how important it is in today s world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians common sense or on logic have not resulted in a better understanding of mathematics by more students The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals designs and

productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally politically and economically justified institutions namely schools Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology sociology and mathematics Psychological theories focus on the individual learner Theories of sociology of education look at the general laws of curriculum development the specifics of pedagogic discourse as opposed to scientific discourse in general the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society Mathematics aside from its theoretical contents can be looked at from historical and epistemological points of view clarifying the genetic development of its concepts methods and theories This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts
