

THE NATIONAL AEROSPACE PLANE PROGRAM AND THE APL ROLE

The National AeroSpace Plane program aims to develop and demonstrate the requisite aerospace technologies for achieving single-stage-to-orbit flight using airbreathing engines. This goal is to be achieved through the development of two experimental X-30 vehicles and requires extending the state of the art in nearly every major aerospace discipline. Perhaps the biggest challenge is the development of the airbreathing propulsion system of the vehicles. This article is an overview of the National AeroSpace Plane program and summarizes the Laboratory's contributions to the development of the requisite propulsion and propulsion-related technologies.

THE PRINCIPAL CHALLENGE

The ultimate objective of the National AeroSpace Plane (NASP) program is to develop two X-30 aircraft (one of which is shown conceptually in Fig. 1) that are capable of single-stage-to-orbit (SSTO) flight and horizontal takeoff and landing from conventional runways. The aircraft will be hydrogen fueled and will be powered by airbreathing engines to accelerate from takeoff to orbital velocities of more than 17,000 miles per hour, or about Mach 25 (i.e., 25 times the speed of sound). A sophisticated system will power the vehicle up to a flight speed of about Mach 3, at which point the primary ramjet/scramjet engines will take over to power the vehicle up to high hypersonic flight speeds. A rocket will provide the final thrust increment required for orbital insertion and for the reentry burn. Upon completion of the mission,

the X-30 will return to land in a manner similar to the space shuttle; unlike the shuttle, however, the airplane-like qualities of the X-30 will enable the vehicle to be powered on approach to landing and capable of rapid turnaround after landing.

To make the NASP program goals a reality, the concurrent development of revolutionary technologies is required in almost every major aerospace discipline, from new tires to handle the high takeoff velocities, to materials and propulsion systems that have never been demonstrated in flight. Therein lies the real national motivation for NASP; that is, to foster a significant advancement of the state of the art in aerospace technology for high-speed flight. Making this challenge especially formidable is the difficulty, and sometimes the impossibility, of

Evaluation of the National Aerospace Initiative National Research Council, Division on Engineering and Physical Sciences, Air Force Science and Technology Board, Committee on the National Aerospace Initiative, 2004-06-16 The National Aerospace Initiative NAI was conceived as a joint effort between the Department of Defense DOD and the National Aeronautics and Space Administration NASA to sustain the aerospace leadership of the United States through the acceleration of selected aerospace technologies hypersonic flight access to space and space technologies The Air Force became concerned about the NAI's possible consequences on Air Force programs and budget if NAI program decisions differed from Air Force priorities To examine this issue it asked the NRC for an independent review of the NAI This report presents the results of that assessment It focuses on three questions asked by the Air Force is NAI technically feasible in the time frame laid out is it financially feasible over that period and is it operationally relevant

ASEAN Space Programs Quentin Verspieren, Maximilien Berthet, Giulio Coral, Shinichi Nakasuka, Hideaki Shiroyama, 2022-01-12 This book presents the first ever comprehensive analysis of ASEAN space development programs Written by prominent actors in the region it goes beyond a mere exposé of the history current status and future plans of ASEAN space technology development and utilization programs by analyzing the conditions in which a space program can be initiated in the region It does so in two ways on the one hand it questions the relevance of and motivations behind the inception of space development programs in developing countries and on the other hand it focuses on the very specific context of ASEAN a highly disaster prone area shaped by unique political alliances with a distinctive geopolitical ecosystem and enormous economic potential etc Last but not least after having analyzed established and emerging space programs in the region it provides concrete recommendations for any regional or extra regional developing nation eager to gain a foothold in space As such this book offers a valuable resource for researchers and engineers in the field of space technology as well as for space agencies and government policymakers
