Progressive Manifesto New Ideas For The Centre Left:

Critiques Tom Brass,2024-10-21 Critiques presented here in defence of development range across a number of issues all of which are central to discussions about the desirability or undesirability of this historical process These include one particular aspect labour market competition of the debate about racism why the reproduction of this ideology is more acute at some historical conjunctures but not others the same question that can also be asked of the industrial reserve Equally contentious is the current dominance of populist and postmodern interpretations of rural development in the misleading guise of new paradigms the object of which is to exorcise two ghosts not just development itself but also Marxist theory about development *The Solitary Voice of Dissent* Martin Kay,2020-10-06 This book urges respect for solitary dissent rather than censure It equips a wide audience to understand what previously seemed unimaginable much less comprehensible It shows the reader how to reach beyond those first conclusions and into the heart of the matter The lone voice explains that something has been hidden away something which the individual now dissenting can no longer acquiesce in It raises the possibility that more may be seriously wrong Those who need to understand range from academics to researchers to managers to elected representatives to journalists We all have an interest in knowing not just what has gone wrong but also why this person and no other decided they could take no more If we are to correct a bad situation rather than just patch it up we need clarity at every level of the individual s deepening unease The book uses four case studies two in Ireland one in UK all on the record and one authoritative biography of a well known Italian personality to demonstrate an approach to analyzing solitary dissent The methods used are academic but in the way they are presented certainly intelligible to the lay reader Indeed the author who is one of the case studies writes with a degree of affection for his two authorities Michel Foucault and Anthony Giddens which is engaging anything but formal but no less authoritative for that Another persuasive output of the book is the resonance of solitary dissent with Jean Paul Sartre s existentialism which is also analysed *The Solitary Voice of Dissent* is limited by the extent to which the author has been able to delve into the personal privacy of the case studies offered With commendable detachment he is able to examine his own experience and the biography he has selected allows a similarly deep investigation into the fourth case study While each personality investigated was male the author also identifies certain contemporary female dissenters This is an area increasingly impacting upon the public s awareness but which no one has written about before If we are to mend our society we need to start a conversation A wide audience will wish to follow it

Regulating Artificial Intelligence Thomas Wischmeyer, Timo Rademacher, 2019-11-29 This book assesses the normative and practical challenges for artificial intelligence AI regulation offers comprehensive information on the laws that currently shape or restrict the design or use of AI and develops policy recommendations for those areas in which regulation is most urgently needed By gathering contributions from scholars who are experts in their respective fields of legal research it demonstrates that AI regulation is not a specialized sub discipline but affects the entire legal system and thus concerns all lawyers Machine learning based technology which lies at the heart of what is commonly referred to as AI is increasingly being employed to make policy and business decisions with broad social impacts and therefore runs the risk of causing wide scale damage At the same time AI technology is becoming more and more complex and difficult to understand making it harder to determine whether or not it is being used in accordance with the law In light of this situation even tech enthusiasts are calling for stricter regulation of AI Legislators too are stepping in and have begun to pass AI laws including the prohibition of automated decision making systems in Article 22 of the General Data Protection Regulation the New York City AI transparency bill and the 2017 amendments to the German Cartel Act and German Administrative Procedure Act While the belief that something needs to be done is widely shared there is far less clarity about what exactly can or should be done or what effective regulation might look like The book is divided into two major parts the first of which focuses on features common to most AI systems and explores how they relate to the legal framework for data driven technologies which already exists in the form of national and supra national constitutional law EU data protection and competition law and anti discrimination law In the second part the book examines in detail a number of relevant sectors in which AI is increasingly shaping decision making processes ranging from the notorious social media and the legal financial and healthcare industries to fields like law enforcement and tax law in which we can observe how regulation by AI is becoming a reality
