Comparative Embryology of Angiosperms Vol. 1/2 Brij M. Johri,Kunda B. Ambegaokar,Prem S. Srivastava,2013-06-29
COMPARATIVE EMBRYOLOGY OF ANGIOSPERMS is a review of the developmental processes leading to sexual reproduction in flowering plants On the basis of embryological data and certain evidences from other areas of study it lays special emphasis on the relationship among and within the families and orders of angiosperms Occasionally inaccuracies in observation and interpretation are pointed out alternative interpretations offered gaps in our knowledge highlighted and prospects outlined The text is documented with 36 tables 376 figures and about 5000 literature citations which contribute to making this book comprehensive Besides students and research workers interested in angiosperm embryology taxonomists plant breeders agriculturists and horticulturists will also find much useful information in this treatise **Current Trends in**

the Embryology of Angiosperms Sant Saran Bhojwani,Woong-Young Soh,2001-04-30 The revolutionary progress made in this fascinating field of sexual reproduction inspired this generously illustrated volume It includes 21 chapters written by experts covering all aspects of the embryology of angiosperms ranging from development isolation and structure of gametes to endosperm and seed development *Embryology of Flowering Plants: Terminology and Concepts, Vol. 3* T B Batygina,2019-04-23 Plant embryology dealing with the regularities of initiation and the first stages of development of an organism is now flourishing because of the overall progress being made in natural sciences Such discoveries of the 20th century as production of plants from a single somatic cell experimental haploidy and parasexual hybridization were of general biological significance The combined efforts of embryologists geneticists and molecular biologists yielded the discovery of specific genes that control meiosis egg cell development and early stages of embryogenesis The tendency to synthesize data of embryology and genetics has become increasingly noticeable It is connected with the fact that the majority of problems connected with morphogenesis such as differentiation specialization the evaluation of features and the definition of the notions gene and feature and genotype and phenotype concern embryology and genetics embryogenetics in one way or another Evolutionary embryology has given rise to a new approach to the study of problems of adaptation in plants In connection with the problem of preserving biological diversity under conditions of ecological stress special attention is paid to ecological embryology revealing the critical periods in early ontogenesis and plasticity and tolerance of reproductive systems at the level of species and population The study of variability of morphogenesis and phenotype in population life cycle variations and the diversity of reproductive systems is the most important point in the population embryology of plants
