The Politics of Mobility Geoff Vigar, 2013-09-05 Transport issues are critically embedded in everyday life For this very reason ways of addressing such issues are almost always hugely politically contentious as a quick glance at local and national media will testify Such contentiousness is growing as ever increasing mobility for many in western society has led to a critical examination of the fundamental basis by which transport issues are considered in government and beyond Despite the strength of this examination the implementation of new approaches to dealing with transport issues has proved deeply problematic The Politics of Mobility pioneers a methodological and theoretical framework derived from the social and political sciences to shed light on the complexities of dealing with these issues It mobilises three case studies that highlight the realpolitik of dealing with such concerns for students practitioners researchers and activists

International Environmental Law in the Asia Pacific Ben Boer, Donald R. Rothwell, Ross Ramsay, Donald Rothwell, 1998-02-18. The purpose of this book is to assess the development of international environmental law in the Asia Pacific. Consideration is given to the impact upon the region of global, regional and subregional environmental law. An assessment is also undertaken of how certain states and groups of states have responded domestically and within their own subregions to these developments. For the purposes of this book, the Asia Pacific is defined as essentially the states which comprise East and Southeast Asia, Australia, New Zealand and the island states of the Southwest Pacific. Occasional consideration is also given to the states of South Asia.

Environment : Problems And Policies : (encyclopaedia Of Environment), K.R. Gupta, 2005. Encyclopaedia Of Environment has a wide coverage and comprehensively studies the global environmental change and environmental degradation mainly caused by human interference: air pollution and ozone depletion, greenhouse effects, climatic change, land degradation, deforestation, desertification, loss of biodiversity, surface and groundwater contamination, hazardous wastes and agricultural pollution and several other problems related to environment that are of primary concern. It is highly likely that environmental degradation would reduce the capacity of human societies to maintain their lifestyles at existing levels since the driving forces of global economy may no longer be able to use in sustained manner the limited resources of the earth. Although the consequences of environmental degradation are sometimes not recognized but in many cases they are intentionally ignored because of the illusory higher economic gains. Realising the urgent need for arresting the trend, for developing awareness in the readers about the preservation of biodiversity and its significance for life sustainability and equity and for warning against the consequences of environmental exploitation as well, the present encyclopaedia of environment has been compiled. It not only studies the problems related to environment but also suggests suitable remedial measures. Attempts have been made to include in these well documented volumes all the latest major policies adopted by the United Nations Organisation and its affiliated agencies as well as by the developed and developing countries across the world. The first four volumes of the encyclopaedia include papers on environment, glossary of global warming and a detailed bibliography to enable the readers to pursue the study further. The following five volumes include international, regional and national conventions, protocols, treaties and agreement relating to environment and the Indian laws for clean environment and pollution.

Originally published in 1999 Urban Ecologies Christopher Schliephake, 2014-12-11

The term urban ecology has become a buzzword in various disciplines including the social and natural sciences as well as urban planning and architecture The environmental humanities have been slow to adapt to current theoretical debates often excluding human built environments from their respective frameworks This book closes this gap both in theory and in practice bringing together urban ecology with ecocritical and cultural ecological approaches by conceptualizing the city as an integral part of the environment and as a space in which ecological problems manifest concretely

Arguing that culture has to be seen as an active component and integral factor within urban ecologies it makes use of a metaphorical use of the term perceiving cities as spatial phenomena that do not only have manifold and complex material interrelations with their respective natural environments but that are intrinsically connected to the ideas imaginations and interpretations that make up the cultural symbolic and discursive side of our urban lives and that are stored and constantly renegotiated in their cultural and artistic representations

The city is within this framework both seen as an ecosystemically organized space as well as a cultural artifact

Thus the urban ecology outlined in this study takes its main impetus from an analysis of examples taken from contemporary culture that deal with urban life and the complex interrelations between urban communities and their natural and built environments **Landscape Ecological Analysis**
