Scott,1990 **Water-resources Investigations Report** ,1994 **Technical Report CERC** ,1983 Soil Erosion and Sustainable Land Management (SLM) Atsushi Tsunekawa,Nigussie Haregeweyn,2021-05-26 This Special Issue titled Soil Erosion and Sustainable Land Management presents 13 chapters organized into four main parts The first part deals with assessment of soil erosion that covers historical sediment dating to understand past environmental impacts due to tillage laboratory simulation to clarify the effect of soil surface microtopography integrated field observation and the random forest machine learning algorithm to assess watershed scale soil erosion assessment and developing the sediment delivery distributed SEDD model for sub watershed erosion risk prioritization In Part II the factors controlling soil erosion and vegetation degradation as influenced by topographic positions and climatic regions long term land use change and improper implementation of land management measures are well dealt with Part III presents different land management technologies that could reduce soil erosion at various spatial scales improve land productivity of marginal lands with soil microbes and reclaim degraded farmland using dredged reservoir sediments The final part relates livelihood diversification to climate vulnerability as well as the coping strategy to the adverse impacts of soil erosion through sustainable land management implementation which opens prospects for policy formulation The studies cover regions of Africa Europe North America and

Asia being dominantly conducted under the framework of international scientific collaborations through employing a range techniques and scales from the laboratory to watershed scales We believe those unique features of the book could attract the interest of the wider scientific community worldwide Field manual for research in agricultural hydrology Donald L. Bower, 2015-09-16 This report was undertaken on local regional state and federal levels in the United States to analyse the impact residuals have on environmental quality and to emphasise the need for Residuals Environmental quality management REQM Originally published in 1982 this study brings together information on approaches for analysing natural systems and which factors to consider when choosing an approach This title will be of interest to students of environmental studies as well as professionals and policy makers **Capacity and Sedimentation of Loch Lomond Reservoir, Santa Cruz County, California** Ronald P. Fogelman, Karen L. Johnson, 1985 Sediment-transport Characteristics of Cane Creek, Lauderdale County, Tennessee William P. Carey, 1993 Sediment Response to Large-scale Environmental Change Richard P. R. Pannell, 1999 Knowledge about sediment yields is important in developing management strategies for fluvial systems The effect of sediment must be considered in the design of river structures and in determining water quality for biotic systems Changes in sediment transport regimes are difficult to understand or predict due to the complexity of factors that influence sediment flux in fluvial systems Relationships about sediment source sinks and transport have long been studied and many of these relationships have been quantitatively and qualitatively defined However due to the scarcity of long term sediment records it is often difficult to test these relationships This study examines one of these long term suspended sediment records

for the Mississippi River at East Dubuque Illinois from 1943 to 1996 Daily suspended sediment concentrations from the United States Army Corps of Engineers station at East Dubuque were analyzed for the spring and summer months March August Sediment concentrations were analyzed in terms of average concentration during different hydrologic events at the large basin scale These events included the spring snowmelt runoff low and high magnitude and different intensity storm runoff low moderate and high Additionally peak sediment concentrations during storm runoff were also analyzed The general trend for all of these analyses suggests a significant decrease in sediment concentrations from the 1940s to the 1990s The strongest trends are found in high magnitude snowmelt runoff and in high and moderate magnitude storm runoff Peak concentrations in storm runoff have decreased from about 1000 ppm in the 1940s to about 200 ppm in the 1990s Average concentrations have likewise decreased from about 200 ppm in the 1940s to 100 ppm in the 1990s Changes in land management practices are identified as being the primary environmental factor influencing sediment concentrations

Sediment Discharge in Muddy Creek and the Effect of Sedimentation Rate on the Proposed Wolford Mountain Reservoir Near Kremmling, Colorado Barbara C. Ruddy, 1987 *River Mechanics* Pierre Y. Julien, 2002-08-19 This textbook offers a thorough analysis of rivers from upland areas to oceans It scrutinizes select methods underlining both theory and engineering applications emphasizing the mechanics of flood wave propagation and sediment transport in rivers The text covers fundamental principles engineering analysis and engineering design with problems examples and case studies throughout Channel stability and river dynamics are examined in terms of river morphology lateral migration aggradation and degradation Detailed treatments of riverbank stabilization and engineering methods are provided while separate chapters cover physical and mathematical models This essential text presents both the theory and design of measures to reduce flood impact and bank erosion to improve navigation and to increase water supply to cities and irrigation canals Over 100 exercises and nearly twenty case studies make this book an invaluable learning tool for students and researchers and practitioners will find it a concise resource on the mechanics of rivers **Outer Continental Shelf Environmental Assessment Program, Final Reports of Principal Investigators** , 1984
