**Seismic Effects of Underground Explosions** Institut fiziki Zemli im. O.I.U. Shmidta, 1962 *Seismic effects of underground explosions: authorized tr* Institut fiziki Zemli im. O.I.U. Shmidta, **Some Seismic Effects of Underground Explosions in Cavities** George L. Lamb, 1960 **Identification of Seismic Sources – Earthquake or Underground Explosion** Eystein S. Husebye, S. Mykkelveit, 2012-12-06 The subject of this NATO Advanced Study Institute was seismic monitoring under a nuclear test ban an application of scientific knowledge and modern technology for a political purpose The international political objective of a comprehensive nuclear test ban provided in turn the motivation for our technical and scientific discussions In order to obtain a historical perspective on the progress of the work towards a comprehensive test ban treaty CTB it is necessary to go back to 1958 when a conference of scientific experts in Geneva made the first steps toward an international seismic monitoring system However agreement on actual capabilities of a monitoring system for verifying compliance with such a treaty was not achieved and thus the conference did not lead to immediate political results After the Partial Test Ban Treaty of 1963 which banned nuclear explosions in the atmosphere outer space and under the seas renewed interest in the seismological verification of a CTB took place A number of countries initiated large scale research efforts toward detecting and identifying underground nuclear explosions and it was in this context that the large aperture seismic arrays NORSAR and LASA were established This type of development resulted in excellent seismic data in digital form and was thus of great importance to the seismological community **Nuclear Science Abstracts**, 1975 *Monitoring the Comprehensive Nuclear-Test-Ban Treaty: Source Processes and Explosion Yield Estimation* Goran Ekstrom, Marvin Denny, John R. Murphy, 2012-12-06 Pure appl geophys by 161 nations Entry of the treaty into force however is still uncertain since it requires ratification by all 44 nations that have some nuclear capability and as of 15 June 2001 only 31 of those nations have done so Although entry of the CTBT into force is still uncertain seismologists and scientists in related fields such as radionuclides have proceeded with new research on issues relevant to monitoring compliance with it Results of much of that research may be used by the International Monitoring System headquartered in Vienna and by several national centers and individual institutions to monitor compliance with the CTBT New issues associated with CTBT monitoring in the 21st century have presented scientists with many new challenges They must be able to effectively monitor compliance by several countries that have not previously been nuclear powers Effective monitoring requires that we be able to detect and locate much smaller nuclear events than ever before and to distinguish them from small earthquakes and other types of explosions We must have those capabilities in regions that are seismically active and geologically complex and where seismic waves might not propagate efficiently **Energy Research Abstracts**, 1985 **ERDA Energy Research Abstracts**, 1983 **TID**, 1964 **Peaceful Uses for Nuclear Explosives**, 1964 *U.S. Government Research & Development Reports*, 1965 *Scientific and Technical Aerospace Reports*, 1972 Lists citations
