The Dialectics of Urban and Architectural Boundaries in the Middle East and the Mediterranean Suzan Girginkaya Akdağ, Mine Dinçer, Meltem Vatan, Ümran Topçu, İrem Maro Kırış, 2021-06-01 This edited volume informs readers about changing norms and meanings of borders and underlines recent scenarios that shape these borders It focuses mainly on the Mediterranean and Middle East regions through the following questions What are the social cultural philosophical political economic and aesthetic reasons for spatial segregation within contemporary territories and cities In the world of globalization and networks what are the new limitations of space What are the alienating differences between interior and exterior private and public urban and rural local and global and real and virtual Are spatial definitions and divisions more likely to be weakened if not totally erased by effects of globalization and mobility similar to the dissolution of borders between countries Or are local practices and measures likely to become more apparent with emerging trends such as sustainability and identity Authored by international scholars all chapters are arranged under four main parts Urban and Rural Global and Local Physical and Sensual Real and Virtual Hence different concepts and definitions of borders along with varying methods and tools for questioning their essence in architectural and urban spaces will be introduced For example in the rural and urban context environments settlements housing landscape transformation conservation and development in the global and local context styles identity universal design sustainability globalization and networks mobility and migration in the physical and sensual context design studies and methodologies environmental psychology aesthetic reasoning sense of place and well being and in the real and virtual context realities tools and communities are the main themes of the chapters This book will be an essential source for professionals scholars and students of architecture and urban design with a view to understanding multidisciplinary perspectives in designing borders as well as the dialectical relationship between borders and space

Selected Perspectives on Platforms in E-Commerce Ecosystems Tobias Wulfert, 2024-08-02 Digital platforms hold significant economic value enriching various industry sectors While they are pivotal in driving value creation and capture it is not solely their technological prowess that underpins their economic significance Rather their effectiveness lies in their integration within business ecosystems In this study Tobias Wulfert examines digital platforms in the context of e commerce through five lenses Enterprise architecture Boundary resources Application lifecycle Dynamic capabilities Value creation This analysis focuses on different e commerce platform types developing an architectural framework and a taxonomy for classification The

author also delineates e commerce ecosystem architectures emphasizing the role of platforms as central components and the involvement of peripheral ecosystem participants He explores boundary resources as crucial interfaces between platforms and ecosystem participants He further suggests a reference procedure model for the management of these boundary resources Furthermore he delves into the dynamic capabilities necessary for effective ecosystem orchestration identifying configurations of dynamic capabilities that can confer sustainable competitive advantages

Encyclopedia of Information Science and Technology, Second Edition Khosrow-Pour, D.B.A., Mehdi, 2008-10-31

This set of books represents a detailed compendium of authoritative research based entries that define the contemporary state of knowledge on technology Provided by publisher *Analog Layout Generation for Performance and Manufacturability* Koen Lampaert, Georges Gielen, Willy M.C. Sansen, 2013-04-18 Analog integrated circuits are very important as interfaces between the digital parts of integrated electronic systems and the outside world A large portion of the effort involved in designing these circuits is spent in the layout phase Whereas the physical design of digital circuits is automated to a large extent the layout of analog circuits is still a manual time consuming and error prone task This is mainly due to the continuous nature of analog signals which causes analog circuit performance to be very sensitive to layout parasitics The parasitic elements associated with interconnect wires cause loading and coupling effects that degrade the frequency behaviour and the noise performance of analog circuits Device mismatch and thermal effects put a fundamental limit on the achievable accuracy of circuits For successful automation of analog layout advanced place and route tools that can handle these critical parasitics are required In the past automatic analog layout tools tried to optimize the layout without quantifying the performance degradation introduced by layout parasitics Therefore it was not guaranteed that the resulting layout met the specifications and one or more layout iterations could be needed In *Analog Layout Generation for Performance and Manufacturability* the authors propose a performance driven layout strategy to overcome this problem In this methodology the layout tools are driven by performance constraints such that the final layout with parasitic effects still satisfies the specifications of the circuit The performance degradation associated with an intermediate layout solution is evaluated at runtime using predetermined sensitivities In contrast with other performance driven layout methodologies the tools proposed in this book operate directly on the performance constraints without an intermediate parasitic constraint generation step This approach makes a complete and sensible trade off between the different layout alternatives possible at runtime and therefore eliminates the possible feedback route between constraint derivation placement and layout extraction Besides its influence on the performance layout also has a profound impact on the yield and testability of an analog circuit In *Analog Layout Generation for Performance and Manufacturability* the authors outline a new criterion to quantify the detectability of a fault and combine this with a yield model to evaluate the testability of an integrated circuit layout They then integrate this technique with their performance driven routing algorithm to produce layouts that have optimal manufacturability while still meeting their performance specifications *Analog Layout Generation for Performance and Manufacturability* will be of interest to analog engineers researchers and students *Mass Storage Systems for Data Transport in the Early Space Station Era 1992-1998*, 1987 *Software Product Lines* Patrick Donohoe, 2012-12-06 Software product lines are emerging as a critical new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost reductions With the increasing number of product lines and product line researchers and practitioners the time is right for a comprehensive examination of the issues surrounding the software

product line approach The Software Engineering Institute at Carnegie Mellon University is proud to sponsor the first conference on this important subject This book comprises the proceedings of the First Software Product Line Conference SPLC1 held August 28 31 2000 in Denver Colorado USA The twenty seven papers of the conference technical program present research results and experience reports that cover all aspects of software product lines Topics include business issues enabling technologies organizational issues and life cycle issues Emphasis is placed on experiences in the development and fielding of product lines of complex systems especially those that expose problems in the design development or evolution of software product lines The book will be essential reading for researchers and practitioners alike
