International Corporate Finance - Impact of financial ratios on long term credit ratings Swen Beyer,2010-12-01 Master s Thesis from the year 2010 in the subject Business economics Investment and Finance grade 2 0 Reutlingen University Business Administration language English abstract The global financial and economic crises resulted for many corporations in a downgraded credit rating within the last 2 to 3 years Even a large percentage of them defaulted on their credit obligations due to inherent operational factors The importance of credit ratings will play an even more central role under the currently discussed New Basel Capital Accord Basel III Standard Basel III For Global Banks The purpose of this research is to explore the relationship between long term credit ratings and selected financial ratios that can be derived by public information Such information can be very valuable for companies in order to have a slight control over their credit rating obtained by rating agencies as well as in negotiations with banks and other outside creditors The research design is based on three automotive manufacturers and involves their credit rating over the last decade The data for the financial ratios was collected from respective financial statements The study is based on a correlation and multiple regression analysis using the MINITAB Minitab Data Analysis Software Pennsylvania USA software as a statistical platform A step wise approach determined the regression equation with the highest significance The equations were used to detect those variables that have the strongest impact on the credit rating The results for automotive companies with a solid statistical data set are surprisingly high in significance with an adjusted coefficient of determination of over 90% Overall it is not feasible to mention which one of the seventeen financial ratios explains the variation in credit rating most reliable because such a statement depends always on the individual company For example to explain the changes in the rating for the Ford Motor Company the following six ratios turned out to be the most significant ones total equity to total assets sales to fixed assets sales to inventory net income to total equity total equity to long term liabilities and EBIT to sales Each regression equation consisted mostly of different financial ratios Apart from the fact that financial information is only one aspect of the credit rating determination process the attained results are valid and valuable insights for all external and internal rating analysts The global financial and economic crises resulted for many corporations in a downgraded credit rating within the last 2 to 3 years

A Reader in International Corporate Finance
Stijn Claessens, Luc Laeven, 2006-01-01

A Reader in International Corporate Finance offers an overview of current thinking on six topics: law and finance, corporate governance, banking, capital markets, capital structure and financing constraints, and the political economy of finance. This collection of 23 of the most influential articles published in the period 2000-2006 reflects two new trends: interest in international aspects of corporate finance, particularly specific to emerging markets; and awareness of the importance of institutions in explaining global differences in corporate finance. In the last decade, financial economists have increasingly focused on the role of laws and institutions in explaining differences in financial development across countries. This collection will be of great use to readers interested in the emerging new paradigm in corporate governance.

Andrei Shleifer, Harvard University: Anybody seeking to understand corporate finance and corporate governance must read the papers in this book and the literature they have spawned. The financing of firms is based on contracts and the enforcement of those contracts. Without comparing firms under different contractual systems, therefore, it is impossible to grasp fully the key factors shaping the financing and behavior of firms.

Ross Levine, Brown University: This reader describes how law, property rights, and corporate governance contribute to financial development, as well as how private interest groups can block or support financial reform and thereby shape the financial development of countries. It is a must-read for any student of finance.
