May, Erin Daly, 2015 Reflecting a global trend scores of countries have affirmed that their citizens are entitled to healthy air water and land and that their constitution should guarantee certain environmental rights This book examines the increasing recognition that the environment is a proper subject for protection in constitutional texts and for vindication by constitutional courts This phenomenon which the authors call environmental constitutionalism represents the confluence of constitutional law international law human rights and environmental law National apex and constitutional courts are exhibiting a growing interest in environmental rights and as courts become more aware of what their peers are doing this momentum is likely to increase This book explains why such provisions came into being how they are expressed and the extent to which they have been and might be enforced judicially It is a singular resource for evaluating the content of and hope for constitutional environmental rights **Selected Water Resources Abstracts** ,1987-12 Books in Print

 has failed us all As ecosystems collapse across the globe and the climate crisis intensifies environmental agencies worldwide  
 use their authority to permit the very harm that they are supposed to prevent Growing numbers of citizens now realize they  
 must act before it is too late This book exposes what is wrong with environmental law and offers transformational change  
 based on the public trust doctrine An ancient and enduring principle the trust doctrine asserts public property rights to  
 crucial resources Its core logic compels government as trustee to protect natural inheritance such as air and water for all  
 humanity Propelled by populist impulses and democratic imperatives the public trust surfaces at epic times in history as a  
 manifest human right But until now it has lacked the precision necessary for citizens government employees legislators and  
 judges to fully safeguard the natural resources we rely on for survival and prosperity The Nature s Trust approach empowers  
 citizens worldwide to protect their inalienable ecological rights for generations to come      **Legal, Institutional, and  
 Economic Indicators of Forest Conservation and Sustainable Management** ,2005 This review looks at the Nation s  
 legal institutional and economic capacity to promote forest conservation and sustainable resource management It focuses on  
 20 indicators of Criterion Seven of the so called Montreal Process and involves an extensive search and synthesis of  
 information from a variety of sources It identifies ways to fill information gaps and improve the usefulness of several  
 indicators It concludes that there is substantial information about the application of such capacities although that application  
 is widely dispersed among agencies and private interests which in turn has led to differing interpretations of the indicators  
 Individual chapters identify a need to further develop the conceptual foundation on which many of the indicators are  
 predicated While many uncertainties in the type and accuracy of information are brought to light the review clearly indicates  
 that legal institutional and economic capacities to promote sustainability are large and widely available in both the public and  
 private sectors P vi      **Pollution Control and the Pattern of Trade** Sezai Demiral,2017-10-17 This title first published in  
 1990 is intended to assess the impact of national environmental control policies on international trade and competitiveness in  
 general and in particular the impact of differential environmental control policies on the international trade and  
 competitiveness of the two industrialized nations Germany and the United States To assess the impact of differential  
 environmental control policies on trade this study applies a comparative analysis of the two countries      *Cases and
