Selected Papers Of Theodore S Motzkin:

Selected Papers of Theodore S. Motzkin Cantor, 1983-01-01 **Selected Papers** Joseph L. Walsh, 2000-02-11 This volume is a selection from the 281 published papers of Joseph Leonard Walsh former US Naval Officer and professor at University of Maryland and Harvard University The nine broad sections are ordered following the evolution of his work Commentaries and discussions of subsequent development are appended to most of the sections Also included is one of Walsh s most influential works A closed set of normal orthogonal function which introduced what is now known as Walsh Functions **Theodore S. Motzkin** Theodore Samuel Motzkin, 1983 *Selected Papers on Algebra and Topology* by Garrett Birkhoff J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historieal background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of ea ch paper reprinted there and to indieate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928 32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin s beautiful Cours d Analyse Infinitesimale Hausdorff s Grundz ge der Mengenlehre and Frechet s Espaces Abstraits In addition I discovered Caratheodory s 1912 paper Vber das lineare Mass von Punktmengen and Hausdorff s 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV *Selected Papers of Norman Levinson* J.A. Nohel, D.H. Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochas tic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynami cal systems and chaos The horseshoe map was directly stimulated by Levinson s research on forced periodic oscillations of the Van der Pol oscillator and specifi cally by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed dif ferential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel fand Levitan method to the inverse scattering problem for the Schrodinger equation He was the first to analyze and make explicit use of

wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community

1947-1954 Magnus Rudolph Hestenes, 1991 *Real Algebraic Geometry and Ordered Structures* Charles N. Delzell, James

J. Madden, 2000 This volume contains 16 carefully refereed articles by participants in the Special Semester and the AMS Special Session on Real Algebraic Geometry and Ordered Structures held at Louisiana State University and Southern University Baton Rouge. The 23 contributors to this volume were among the 75 mathematicians from 15 countries who participated in the special semester. Topics include the topology of real algebraic curves, Hilbert's 16th problem, moduli of real algebraic curves, effective sums of squares of real forms, Hilbert's 17th problem, efficient real quantifier elimination, subanalytic sets and stratifications, semialgebraic singularity theory, radial vector fields, exponential functions and valuations on nonarchimedean ordered fields, valued field extensions, partially ordered and lattice ordered rings, rings of continuous functions, spectra of rings and abstract spaces of higher level orderings and real places. This volume provides a good overview of the state of the art in this area in the 1990s. It includes both expository and original research papers by top workers in this thriving field. The authors and editors strived to make the volume useful to a wide audience including students and researchers interested in real algebraic geometry and ordered structures, two subjects that are obviously related but seldom brought together.
