Selected Works Of Hans A Bethe:

Selected Works of Hans A. Bethe Hans A. Bethe, 1997 Hans Bethe received the Nobel Prize for Physics in 1967 for his work on the production of energy in stars He helped to shape classical physics into quantum physics and increase the understanding of the atomic processes responsible for the properties of matter and of the forces governing the structures of atomic nuclei This collection of papers by Hans Bethe dates from 1928 when he received his PhD to the present **Selected Works of Hans A. Bethe** Hans Albrecht Bethe, 1997 Selected Works of Emil Wolf Emil Wolf, 2001 This invaluable book presents most of the important papers of Emil Wolf published over half a century It covers chiefly diffraction theory especially the analysis of the focal region the theory of direct and inverse scattering phase space methods in quantum mechanics the foundation of radiometry phase conjugation and coherence theory Several papers which have become classics of the optical literature are included such as those on Wolf's rigorous formulation of the theory of partial coherence and partial polarization the introduction of diffraction tomography and his discovery of correlation induced shifts of spectral lines often called the Wolf effect There are also papers dealing with the historical development of optics and some review articles Contents Diffraction Radiation Theory and String Excitations Coherence and Statistical Optics Scattering Foundations of Radiometry Articles of Historical Interest Analyticity Causality and Dispersion Relations Scientists Who Created the World of Optics The Development of Optical Coherence Theory Recollections Commencement Remarks Publications of Emil Wolf Readership Physicists and engineers particularly optical scientists and optical engineers *Quest For Symmetry, A: Selected Works Of Bunji Sakita* Keiji Kikkawa, Miguel Angel Virasoro, Spenta R Wadia, 1999-04-29 This important book contains selected research papers of Prof Bunji Sakita Included are his pioneering papers on SU 6 symmetry strong coupling theory string theory supersymmetry and the method of collective coordinates There is also a vivid personal account of his journey in physics The book brings to light some of the key concepts of modern high energy physics *Selected Papers of Kun Huang* Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph Dynamical Theory of Crystal Lattices During his years of active research he has made important contributions to solid state physics This collection of papers is selected at his own choice as representing his most influential works Included is his work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation his early prediction of diffuse X ray scattering due to crystal defects and his research works on low dimensional semiconductor structures and more Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work such as background motivation and rationale involved Thus he was led to write a commentary which is published alongside the papers

Selected Scientific Papers of Sir Rudolf Peierls Rudolf Ernst Peierls, 1997 This book is a collection of the major

scientific papers of Sir Rudolf Peierls 1907-95 including the Peierls Frisch Memoranda of 1940 on the feasibility and the predicted human effects of an atomic bomb made of uranium 235. His papers range widely in topic. They include much on the fundamentals of solid state physics: the thermal and electric conductivity of materials as a function of temperature T , especially $T = 0$; the interpretation of the de Haas-van Alphen effect observed for a metal in a magnetic field and the basics of transport theory. Many are on problems in statistical mechanics including his constructive paper demonstrating the existence of a phase transition for Ising's model for a two-dimensional ferromagnet. In nuclear physics they include the first calculations with Bethe on the photo-disintegration of the deuteron made in response to a challenge by Chadwick; the Kapur-Peierls theory of resonance phenomena in nuclear reactions; the Bohr-Peierls-Placzek continuum model for complex nuclei which first explained the narrow resonances observed for low energy neutrons incident on very heavy nuclei; and the Peierls-Thouless variational approach to collective phenomena in nuclei. Several of Peierls's wartime papers, now declassified, are here published for the first time. Brief commentaries on most of the papers in this book were added by Peierls to indicate subsequent developments and their relationship with other work or to correct errors found later on. A complete bibliography of his writings is given as an appendix.

Selected Papers of J. Robert Schrieffer John Robert Schrieffer, N. E. Bonesteel, Lev Petrovich Gor'kov, 2002. Presents papers by theoretical physicist J. Robert Schrieffer on topics in superconductivity and condensed matter physics.

Selected Papers Of Richard Feynman (With Commentary) Laurie M. Brown, 2000-10-25. These scientific papers of Richard Feynman are renowned for their brilliant content and the author's striking original style. They are grouped by topic: path integral approach to the foundations of quantum mechanics and quantum field theory; renormalized quantum electrodynamics; theory of superfluid liquid helium; theory of the Fermi interaction; polarons; gravitation; partons; computer theory, etc. Comments on Feynman's topics are provided by the editor together with biographical notes and a complete bibliography of Feynman's publications.

Spectroscopy With Coherent Radiation: Selected Papers Of Norman F Ramsey (With Commentary) Norman F. Ramsey, 1998-06-04. This invaluable volume contains a biography of Nobel laureate Norman F. Ramsey as well as reprints and retrospective commentaries on 56 papers relating to spectroscopy with coherent radiation. The earliest papers describe his work with I.I. Rabi developing the then new magnetic resonance method and its uses to measure magnetic moments of the different forms of hydrogen and to discover the deuteron electric quadrupole moment. Later papers include his invention of the method of coherent separated oscillatory fields; the development of the atomic hydrogen maser and the uses of these methods to measure properties of nucleons, nuclei, atoms and molecules; and to test parity and time reversal symmetries. Other papers present the first successful theories of nuclear magnetic shielding, NMR chemical shifts, electron-coupled nuclear spin-spin interactions and negative absolute temperatures.

Subnuclear Physics, the First 50 Years: Highlights From Erice To Eln O. Barnabei, P. Pupillo, Fabio Roversi, Monaco, Antonino Zichichi, 2000-08-04. For the Galvani Bicentenary Celebrations the University of Bologna and its

Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences. Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science. In his opening lecture delivered on the first day of the new academic year, Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years. Given the importance of this field of fundamental research, Professor Zichichi was invited to expand the contents of his lecture into a book and the outcome is this invaluable volume.
