Self Organisation And Evolution Of Biological And Social Systems:

Self-Organisation and Evolution of Biological and Social Systems Charlotte Korinna Hemelrijk, 2005-09-29 This book contains studies of social behaviour ranging from single celled organisms to humans and shows recent progress in these fields

The Dynamics and Evolution of Social Systems Jürgen Klüver, 2013-03-09 When I started with this book several years ago I originally intended to write an introduction to mathematical systems theory for social scientists Yet the more I thought about systems theory on the one side and theoretical sociology on the other the more I became convinced that the classical mathematical tools are not very well suited for the problems of sociology Then I became acquainted with the researches on complex systems by the Santa Fe Institute and in particular with cellular automata Boolean networks and genetic algorithms These mathematically very simple but extremely efficient tools are in my opinion very well appropriate for modeling social dynamics Therefore I tried to reformulate several classical problems of theoretical sociology in terms of these formal systems and outline new possibilities for a mathematical sociology which is able to join immediately on the great traditions of theoretical sociology The result is this book whether I succeeded with it is of course up to the readers As the readers will perceive the book could not have been written by me alone but only by the joint labors of the computer group at the Interdisciplinary Center of Research in Higher Education at the University of Essen The members of the group Christina Stoica Jom Schmidt and Ralph Kier are named in several subchapters as co authors Yet even more important than their contributions to this book were the permanent discussions with them and their patience with my new and very speculative ideas Many thanks

[The Evolution of Cultural Entities](#) Michael Wheeler, John M. Ziman, Margaret A. Boden, 2002 Ever since Darwin scholars have noted that cultural entities such as languages laws and theories seem to evolve through variation selection and replication These essays consider whether this comparison is just a metaphor

The Mind, the Body and the World Brendan Wallace, Alastair Ross, John Davies, Tony Anderson, 2015-11-11 The roots of cognitivism lie deep in the history of Western thought and to develop a genuinely post cognitivist psychology this investigation goes back to presuppositions descended from Platonic Cartesian assumptions and beliefs about the nature of thought

Physics of Self-Organization and Evolution Werner Ebeling, Rainer Feistel, 2011-10-17 This thoroughly updated version of the German authoritative work on self organization has been completely rewritten by internationally renowned experts and experienced book authors to also include a review of more recent literature It retains the original enthusiasm and fascination surrounding thermodynamic systems far from equilibrium synergetics and the origin of life representing an easily readable book and tutorial on this exciting field The book is unique in covering in detail the experimental and theoretical fundamentals of self organizing systems as well as such selected features as random processes structural networks and multistable systems while focusing on the physical and theoretical modeling of natural selection and evolution processes The authors take examples from physics chemistry biology and social systems and include results hitherto unpublished in English The result is a one stop resource

relevant for students and scientists in physics or related interdisciplinary fields including mathematical physics biophysics information science and nanotechnology

Indian Ocean Histories Rila Mukherjee, Radhika Seshan, 2019-08-08 This book offers a global history of the Indian Ocean and focuses on a holistic perspective of the worlds of water It builds on maritime historian Michael Naylor Pearson's works his unorthodox approach and strong influence on the study of the Indian Ocean in viewing the oceanic space as replete with human experiences and not as an artefact of empire or as the theatre of European commercial and imperial transits focused only on trade This interdisciplinary volume presents several ways of writing the history of the Indian Ocean The chapters explore the changing nature of Indian Ocean history through diverse themes including state and capital regional identities maritime networking South Asian immigrants Bay of Bengal linkages the East India Company Indian seamen formal and informal collaboration in imperial networking scientific transfers pearling the issues of colonial copyright customs excise and port cities The volume will be useful to scholars and researchers of global history modern history maritime history medieval history Indian history colonial history and world history

Systems, Self-Organisation and Information Pereira Junior Alfredo, William Pickering, Ricardo Gudwin, 2018-10-04 Complex system studies are a growing area of central importance to a wide range of disciplines ranging from physics to politics and beyond Adopting this interdisciplinary approach *Systems Self Organisation and Information* presents and discusses a range of ground breaking research in complex systems theory Building upon foundational concepts the volume introduces a theory of Self Organization providing definitions of concepts including system structure organization functionality and boundary Biophysical and cognitive approaches to Self Organization are also covered discussing the complex dynamics of living beings and the brain and self organized adaptation and learning in computational systems The convergence of Peircean philosophy with the study of Self Organization also provides an original pathway of research which contributes to a dialogue between pragmatism semeiotics complexity theory and self organizing systems As one of the few interdisciplinary works on systems theory relating Self Organization and Information Theory *Systems Self Organisation and Information* is an invaluable resource for researchers and postgraduate students interested in complex systems theory from related disciplines including philosophy physics and engineering

Economic Evolution and Structural Adjustment David Batten, John L. Casti, Börje Johansson, 2013-06-29 Since the beginning of the fifties the ruling paradigm in the discipline of economics has been that of a competitive general equilibrium Associated dynamic analyses have therefore been preoccupied with the stability of this equilibrium state corresponding simply to studies of comparative statics The need to permeate the boundaries of this paradigm in order to open up new pathways for genuine dynamic analysis is now pressing The contributions contained in this volume spring from this very ambition A growing circle of economists have recently been inspired by two distinct but complementary sources i the pathbreaking work of Joseph Schumpeter and ii recent contributions to physics chemistry and theoretical biology It turns out that problems which are firmly rooted in the economic discipline such as innovation

technological change business cycles and economic development contain many clear parallels with phenomena from the natural sciences such as the slaving principle adiabatic elimination and self organization In such dynamic worlds adjustment processes and adaptive behaviour are modelled with the aid of the mathematical theory of nonlinear dynamical systems The dynamics is defined for a much wider set of conditions or states than simply a set of competitive equilibria A common objective is to study and classify ways in which the qualitative properties of each system change as the parameters describing the system vary

Complexity, Institutions and Public Policy Graham Room, 2011 I think this is a very important book Very few people in the social sciences write books on this topic and really do justice to complexity theory Professor Room gives a very detailed accurate and accessible review of complexity theory as it applies to social policy His link with institutional theory is very appropriate and his discussion on the need for regulation a link with complexity theory that many people would never reach is really important and well grounded It would be of interest to academics who really want to understand the implications of complexity theory for policy making in complex and fast changing situations and to those undertaking advanced courses in politics economics and sociology Jean Boulton University of Cranfield UK Graham Room argues that conventional approaches to the conceptualisation and measurement of social and economic change are unsatisfactory As a result researchers are ill equipped to offer policy advice This book offers a new analytical approach combining complexity science and institutionalism It also provides tools for policy makers in turbulent times Part 1 is concerned with the conceptualisation of socio economic change It integrates complexity science and institutionalism into a coherent ontology of social and policy dynamics Part 2 is concerned with models and measurement It combines some of the principal approaches developed in complexity analysis with models and methods drawn from mainstream social and political science Part 3 offers empirical applications to public policy the dynamics of social exclusion the social dimension of knowledge economies the current financial and economic crisis These are supplemented by a toolkit for the practice of agile policy making

Knowledge, Complexity and Innovation Systems Manfred M. Fischer, Josef Fröhlich, 2013-11-27 In recent years there has been growing scientific interest in the triangular relationship between knowledge complexity and innovation systems The concept of innovation systems carries the idea that innovations do not originate as isolated discrete phenomena but are generated through the interaction of a number of actors or agents This set of actors and interactions possess certain specific characteristics that tend to remain over time Such characteristics are also shared by national regional sectoral and technological interaction systems They can all be represented as sets of institutional actors and interactions whose ultimate goal is the production and diffusion of knowledge The major theoretical and policy problem posed by these systems is that knowledge is generated not only by individuals and organisations but also by the often complex pattern of interaction between them To understand how organisations create new products new production techniques and new organisational forms is important An even more fundamental need is to understand how organisations create new knowledge if this

knowledge creation lies in the mobilisation and conversion of tacit knowledge Although much has been written about the importance of knowledge in management little attention has been paid to how knowledge is created and how the knowledge creation process is managed The third component of the research triangle concerns complexity
