The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers Vicki Cummings, Peter Jordan, Marek Zvelebil, 2014-04-24 For more than a century the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines and has also generated widespread public interest and debate The Oxford Handbook of the Archaeology and Anthropology of Hunter Gatherers provides a comprehensive review of hunter gatherer studies to date including critical engagements with older debates new theoretical perspectives and renewed obligations for greater engagement between researchers and indigenous communities Chapters provide in depth archaeological historical and anthropological case studies and examine far reaching questions about human social relations attitudes to technology ecology and management of resources and the environment as well as issues of diet health and gender relations all central topics in hunter gatherer research but also themes that have great relevance for modern global society and its future challenges The Handbook also provides a strategic vision for how the integration of new methods approaches and study regions can ensure that future research into the archaeology and anthropology of hunter gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity

The Evolution of Human Populations in Arabia Michael D. Petraglia, Jeffrey I. Rose, 2009-11-27 The romantic landscapes and exotic cultures of Arabia have long captured the interests of both academics and the general public alike The wide array and incredible variety of environments found across the Arabian peninsula are truly dramatic tropical coastal plains are found bordering up against barren sandy deserts high mountain plateaus are deeply incised by ancient river courses As the birthplace of Islam the recent history of the region is well documented and thoroughly studied However legendary explorers such as T E Lawrence Wilfred Thesiger and St John Philby discovered hints of a much deeper past during their travels across the subcontinent Drawn to Arabia by the magnificent solitude of its vast sand seas these intrepid adventurers learned from the Bedouin how to penetrate its deserts and returned with stirring accounts of lost civilizations among the wind swept dunes We now know that prior to recorded history Arabia housed countless peoples living a variety of lifestyles including some of the world's earliest pastoralists communities of incipient farmers fishermen dubbed the Ichthyophagi by ancient Greek geographers and Paleolithic big game hunters who were among the first humans to depart their ancestral homeland in Africa In fact some archaeological investigations indicate that Arabia was inhabited by early hominins extending far back into the Early Pleistocene perhaps even into the Late Pliocene

How the Mind Works Steven Pinker, 2009-06-22 A model of scientific writing erudite witty and clear New York Review of Books In this Pulitzer Prize finalist and national bestseller one of the world's leading cognitive scientists tackles the workings of the human mind What makes us rational and why are we so often irrational How do we see in three dimensions What makes us happy afraid

angry disgusted or sexually aroused Why do we fall in love And how do we grapple with the imponderables of morality religion and consciousness How the Mind Works synthesizes the most satisfying explanations of our mental life from cognitive science evolutionary biology and other fields to explain what the mind is how it evolved and how it allows us to see think feel laugh interact enjoy the arts and contemplate the mysteries of life This edition of Pinker s bold and buoyant classic is updated with a new foreword by the author **The Fair Society** Peter Corning,2011-03-01 We ve been told again and again that life is unfair But what if we re wrong simply to resign ourselves to this situation What if we have the power and more the duty to change society for the better We do And our very nature inclines us to do so That s the provocative argument Peter Corning makes in The Fair Society Drawing on the evidence from our evolutionary history and the emergent science of human nature Corning shows that we have an innate sense of fairness While these impulses can easily be subverted by greed and demagoguery they can also be harnessed for good Corning brings together the latest findings from the behavioral and biological sciences to help us understand how to move beyond the Madoffs and Enrons in our midst in order to lay the foundation for a new social contract a Biosocial Contract built on a deep understanding of human nature and a commitment to fairness He then proposes a sweeping set of economic and political reforms based on three principles of fairness equality equity and reciprocity that together could transform our society and our world At this crisis point for capitalism Corning reveals that the proper response to bank bailouts and financial chicanery isn t to get mad it s to get fair

Faces Inside and Outside the Clinic Tony McHugh,2016-04-15 Drawing on studies of surface topography image editing and diagnostic and surgical experience Faces Inside and Outside the Clinic addresses the notion of truth in what are considered to be right and wrong faces whether in clinical cosmetic procedures or in specific sociocultural contexts outside the clinic With attention to the manner in which the human face and often the individual herself or himself as a consequence is physically defined conceptually judged numerically measured and clinically analysed this book reveals that on closer inspection supposedly objective and evidential truths are in fact subjective and prescriptive Adopting a Foucauldian analysis of the ways in which normalising technologies and techniques ultimately preserve and expand upon an increasing array of abnormal facial configurations Faces Inside and Outside the Clinic shows that when determining right and wrong faces what happens inside the clinic is inextricably linked to what happens outside the clinic and vice versa As such it will be of interest to scholars and students of social cultural and political theory contemporary philosophy and the social scientific study of science health and technology *Migration and Mortality in Africa and the Atlantic World, 1700-1900* Philip D.

Curtin,2024-10-28 These papers explore the history of the tropical regions of the Atlantic basin sometimes focused on the Caribbean sometimes on Africa but always with a comparative dimension The Atlantic basin is central to most of these comparisons but they are a part of an even broader effort to capture the perspective of world history Some deal with the shores of the Atlantic in the framework of economic history but the author s concern is most particularly with the role of the

environment in history especially the disease environment Disease was particularly important for migrants who moved from one disease environment to another In the tropical Atlantic disease was a crucial factor in the formation of the slave trade affecting both the involuntary passengers and those who came out from Europe to manage the trade *Projectile Technology* Heidi Knecht,2013-06-29 Artifacts linked to projectile technologies traditionally have provided the foundations for time space systematics and cultural historic frameworks in archaeological research having to do with foragers With the shift in archaeological research objectives to processual interpretations projectile technologies continue to receive marked attention but with an emphasis on the implications of variability in such areas as design function and material as they relate to the broader questions of human adaptation The reason that this particular domain of foraging technology persists as an important focus of research I think comes in three parts A projectile technology was a crucial part of most foragers strategies for survival it was functionally specific and it generally was fabricated from durable materials likely to be detected archaeologically Being fundamental to meat acquisition and the principal source of calories projectile technologies were typically afforded greater time investment formal modification and elaboration of attributes than others Moreover such technologies tend to display greater standardization because of constraints on size morphology and weight that are inherent to the delivery system The elaboration of attributes and standardization of form gives projectile technologies time and space sensitivity that is greater than most other foraging technologies And such sensitivity is immensely valuable in archaeological research **Global History And Migrations** Gungwu Wang,2018-02-12 Humans have been on the move for millennia They have done so slowly as well as quickly sometimes involuntarily sometimes transported by force often relocated at great cost in lives but they have always moved Over the centuries improved transportation has eased the movement even in the face of man made or natural obstacles But in modern times migration has accelerated and its reach has become truly global Whether it is Turkish gastarbeiter in Germany Japanese Nisei in Seattle Filipinos in Kuwait or Haitians in Brooklyn the costs and benefits of human mobility on such a wide and rapid scale are hotly debated **Global History and Migrations** the second volume of the **Global History Series** explores the historical background of this issue by focusing on recent history a time when human movements have been at their most dynamic This book provides a rich cross cultural foundation for a more enlightened understanding of migration and its role in the unfolding shape of global history *Nature in Modernity* Stephen Duguid,2010 *Nature in Modernity* *Servant Citizen* Queen or Comrade explores the origins and implications of the mastery of nature agenda within Western culture and argues that there is a long standing parallel shadow tradition grounded instead in mutuality respect and reciprocity This is explored in a series of chapters that focus on our hunter gatherer heritage the shift to a more sedentary and agricultural life and the subsequent emergence of mastery of self and nature as the dominant cultural objective The impact of this mastery agenda on the natural environment is explored and a case made that our current ecological crisis has its origins in this tradition of mastery A counter tradition is examined identifying a range of

cultural tools grounded in alternative traditions tools that can be used to create a culture of care mutuality and reciprocity in which it will be logical to welcome nature in all its complexity as a fellow citizen
