Selforganization And The City:

Self-Organization and the City Juval Portugali, 2012-11-28 This book integrates the theories of complex self organizing systems with the rich body of discourse and literature developed in what might be called social theory of cities and urbanism It uses techniques from dynamical complexity and synergetics to successfully tackle open social science questions

Self-Organization and the City Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents areal challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner's dilemma is becoming more and more visible cities and megacities seem to be unplannable In this book Juval Portugali introduces a new idea Cities are self organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co workers he has performed detailed model calculations on cellular nets It has been a great pleasure and a wonderful experience for me to discuss these concepts with Juval Portugali over a number of years I was repeatedly and deeply impressed by the way he established profound and often surprising links to other fields of science

Self-Organization of Complex Structures Frank Schweitzer, 1997-07-16 During the past twenty years a broad spectrum of theories and methods have been developed in physics chemistry and molecular biology to explain structure formation in complex systems These methods have been applied to many different fields such as economics sociology and town planning and this book reflects the interdisciplinary nature of complexity and self organisation The main focus is on the emergence of collective phenomena from individual or microscopic interactions Presents a wide ranging overview from fundamental aspects of the evolution of complexity to applications in biology ecology sociology economics and urban structure formation

Complexity, Cognition and the City Juval Portugali, 2011-07-06 Complexity Cognition and the City aims at a deeper understanding of urbanism while invoking on an equal footing the contributions both the hard and soft sciences have made and are still making when grappling with the many issues and facets of regional planning and dynamics In this work the author goes beyond merely seeing the city as a self organized emerging pattern of some collective interaction between many stylized urban agents he makes the crucial step of attributing cognition to his agents and thus

raises for the first time the question on how to deal with a complex system composed of many interacting complex agents in clearly defined settings Accordingly the author eventually addresses issues of practical relevance for urban planners and decision makers The book unfolds its message in a largely nontechnical manner so as to provide a broad interdisciplinary readership with insights ideas and other stimuli to encourage further research with the twofold aim of further pushing back the boundaries of complexity science and emphasizing the all important interrelation of hard and soft sciences in recognizing the cognitive sciences as another necessary ingredient for meaningful urban studies

Understanding Emergent Urbanism Sotir Dhamo, 2021-08-31 The ideas presented in this book are a conceptual leverage to correct the rigidity of top down practices and bring the real city or the city of everyday life closer to the city of conventional planning Considering self organization as the starting point at the base of complex systems this book tries to understand how specific qualities emerge and evolve from this behavior For this the book discusses new ways of looking at and understanding cities by applying holistic methods and approaches based on the conceptual grounds of quantum fractal and complexity theories The book highlights the fact that the information on how to transform and build a city is contained within the city itself In this regard some methodological steps to unpack complexities and translate the essential qualities of space into potential generators for city design and planning are provided The book urges courageous experimentation and proposes a methodology where the computational nature of urban phenomena goes along with historic anthropological ideas thus emphasizing the characteristics of a specific reality in a model They do not exclude each other in fact they are part of the unbroken web of wholeness Importantly the proposed methodology supports gradual and natural coevolution process in the city through combining planned and unplanned actions and the involving multiplicity of actors impacting on Urban Planning and Design Practice

Technology and the City Michael Nagenborg, Taylor Stone, Margoth González Woge, Pieter E. Vermaas, 2021-01-25 The contributions in this volume map out

how technologies are used and designed to plan maintain govern demolish and destroy the city The chapters demonstrate how urban technologies shape and are shaped by fundamental concepts and principles such as citizenship publicness democracy and nature The many authors herein explore how to think of technologically mediated urban space as part of the human condition The volume will thus contribute to the much needed discussion on technology enabled urban futures from the perspective of the philosophy of technology This perspective also contributes to the discussion and process of making cities smart and just This collection appeals to students researchers and professionals within the fields of philosophy of technology urban planning and engineering
