Lung Inflammation in Health and Disease, Volume I Yong-Xiao Wang, 2021-03-31 Respiratory diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma the most common chronic disease Each year tens of millions of people develop and can die from from respiratory infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for those affected Current treatment options for lung disease are neither effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field

particularly in understanding the molecular genes regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics

CRC Handbook of Animal Models of Pulmonary Disease Jerome Owen Cantor, 2018-05-04 This two volume handbook provides important information concerning the development implementation evaluation uses advantages and limitations of a wide variety of animal model of pulmonary disease While the work focuses on stepwise procedures for inducing and quantifying disease additional emphasis is placed on each model s relationship to human counterparts and on comparisons with similar models of injury Thus even the novice researcher will be able to more sharply define a particular research question find suitable animal models for study gain access to specialized techniques and evaluate results within the context of an up to date body of information about related forms of lung diseases Ventilator-Induced Lung Injury Didier Dreyfuss, Georges Saumon, Rolf Hubmayr, 2006-03-21 This reference surveys current best practices in the prevention and management of ventilator induced lung injury VILI and spans the many pathways and mechanisms of VILI including cell injury and repair the modulation of alveolar capillary barrier properties and lung and systemic inflammatory consequences of injurious mechanical ventilation Cons *Understanding Lung Acinar Micromechanics in Health and Disease: Linking Quantitative Imaging and Organ Scale Mechanics by Computational Modeling* Matthias Ochs, Bradford Julian Smith, Lars Knudsen, 2021-02-26 Interstitial Lung Disease Marvin I.
