*Machine Learning Methods for Planning* , **Machine Learning Methods for Planning** Steven Minton, 2014 Machine Learning Methods for Planning provides information pertinent to learning methods for planning and scheduling This book covers a wide variety of learning methods and learning architectures including analogical case based decision tree explanation based and reinforcement learning Organized into 15 chapters this book begins with an overview of planning and scheduling and describes some representative learning systems that have been developed for these tasks This text then describes a learning apprentice for calendar management Other chapters consider the problem of temporal credit assignment and describe tractable classes of problems for which optimal plans can be derived This book discusses as well how reactive integrated systems give rise to new requirements and opportunities for machine learning The final chapter deals with a method for learning problem decompositions which is based on an idealized model of efficiency for problem reduction search This book is a valuable resource for production managers planners scientists and research workers

Recent Advances in Reinforcement Learning Leslie Pack Kaelbling, 2007-08-28 Recent Advances in Reinforcement Learning addresses current research in an exciting area that is gaining a great deal of popularity in the Artificial Intelligence and Neural Network communities Reinforcement learning has become a primary paradigm of machine learning It applies to problems in which an agent such as a robot a process controller or an information retrieval engine has to learn how to behave given only information about the success of its current actions This book is a collection of important papers that address topics including the theoretical foundations of dynamic programming approaches the role of prior knowledge and methods for improving performance of reinforcement learning techniques These papers build on previous work and will form an important resource for students and researchers in the area Recent Advances in Reinforcement Learning is an edited volume of peer reviewed original research comprising twelve invited contributions by leading researchers This research work has also been published as a special issue of Machine Learning Volume 22 Numbers 1 2 and 3 **Handbook on Decision Making** Chee Peng Lim, 2010-09-07 Decision making arises when we wish to select the best possible course of action from a set of alternatives With advancements of the digital technologies it is easy and almost instantaneous to gather a large volume of information and or data pertaining to a problem that we want to solve For instance the world wide web is perhaps the primary source of information and or data that we often turn to when we face a decision making problem However the information and or data that we obtain from the real world often are complex and comprise various kinds of noise Besides real world information and or data often are incomplete and ambiguous owing to uncertainties of the environments All these make decision making a challenging task To cope with the challenges of decision making searchers have designed and developed a variety of decision support systems to provide assistance in human decision making processes The main aim of this book is to provide a small collection of techniques stemmed from artificial intelligence as well as other complementary

methodologies that are useful for the design and development of intelligent decision support systems Application examples of how these intelligent decision support systems can be utilized to help tackle a variety of real world problems in different mains e g business management manufacturing transportation and food industries and biomedicine are also presented A total of twenty chapters which can be broadly divided into two parts i e      **Foundations of Learning Classifier Systems** Larry Bull,2005-07-22 This volume brings together recent theoretical work in Learning Classifier Systems LCS which is a Machine Learning technique combining Genetic Algorithms and Reinforcement Learning It includes self contained background chapters on related fields reinforcement learning and evolutionary computation tailored for a classifier systems audience and written by acknowledged authorities in their area as well as a relevant historical original work by John Holland      *Machine Learning and Its Applications* Georgios Paliouras,Vangelis Karkaletsis,Constantine D. Spyropoulos,2003-06-29 In recent years machine learning has made its way from artificial intelligence into areas of administration commerce and industry Data mining is perhaps the most widely known demonstration of this migration complemented by less publicized applications of machine learning like adaptive systems in industry financial prediction medical diagnosis and the construction of user profiles for Web browsers This book presents the capabilities of machine learning methods and ideas on how these methods could be used to solve real world problems The first ten chapters assess the current state of the art of machine learning from symbolic concept learning and conceptual clustering to case based reasoning neural networks and genetic algorithms The second part introduces the reader to innovative applications of ML techniques in fields such as data mining knowledge discovery human language technology user modeling data analysis discovery science agent technology finance etc

*Machine Learning and Knowledge Discovery in Databases* Annalisa Appice,Pedro Pereira Rodrigues,Vítor Santos Costa,Carlos Soares,João Gama,Alípio Jorge,2015-08-28 The three volume set LNAI 9284 9285 and 9286 constitutes the refereed proceedings of the European Conference on Machine Learning and Knowledge Discovery in Databases ECML PKDD 2015 held in Porto Portugal in September 2015 The 131 papers presented in these proceedings were carefully reviewed and selected from a total of 483 submissions These include 89 research papers 11 industrial papers 14 nectar papers and 17 demo papers They were organized in topical sections named classification regression and supervised learning clustering and unsupervised learning data preprocessing data streams and online learning deep learning distance and metric learning large scale learning and big data matrix and tensor analysis pattern and sequence mining preference learning and label ranking probabilistic statistical and graphical approaches rich data and social and graphs Part III is structured in industrial track nectar track and demo track      **Artificial Intelligence** Nils J. Nilsson,1998-04-17 Intelligent agents are employed as the central characters in this new introductory text Beginning with elementary reactive agents Nilsson gradually increases their cognitive horsepower to illustrate the most important and lasting ideas in AI Neural networks genetic programming computer vision heuristic search knowledge representation and reasoning Bayes networks planning and language

understanding are each revealed through the growing capabilities of these agents The book provides a refreshing and motivating new synthesis of the field by one of AI s master expositors and leading researchers Artificial Intelligence A New Synthesis takes the reader on a complete tour of this intriguing new world of AI An evolutionary approach provides a unifying theme Thorough coverage of important AI ideas old and new Frequent use of examples and illustrative diagrams Extensive coverage of machine learning methods throughout the text Citations to over 500 references Comprehensive index

Adaptivity and Learning Reimer Kühn,Randolf Menzel,Wolfram Menzel,Ulrich Ratsch,Michael M. Richter,Ion-Olimpiu Stamatescu,2013-06-29 Adaptivity and learning have in recent decades become a common concern of scientific disciplines These issues have arisen in mathematics physics biology informatics economics and other fields more or less simultaneously The aim of this publication is the interdisciplinary discourse on the phenomenon of learning and adaptivity Different perspectives are presented and compared to find fruitful concepts for the disciplines involved The authors select problems showing representative traits concerning the frame up the methods and the achievements rather than to present extended overviews
