Volatile Organic Compounds in the Atmosphere Ralf Kopppmann, 2008-04-15 Every day large quantities of volatile organic compounds VOCs are emitted into the atmosphere from both anthropogenic and natural sources The formation of gaseous and particulate secondary products caused by oxidation of VOCs is one of the largest unknowns in the quantitative prediction of the earth's climate on a regional and global scale and on the understanding of local air quality To be able to model and control their impact it is essential to understand the sources of VOCs their distribution in the atmosphere and the chemical transformations which remove these compounds from the atmosphere In recent years techniques for the analysis of organic compounds in the atmosphere have been developed to increase the spectrum of detectable compounds and their detection limits New methods have been introduced to increase the time resolution of those measurements and to resolve more complex mixtures of organic compounds *Volatile Organic Compounds in the Atmosphere* describes the current state of knowledge of the chemistry of VOCs as well as the methods and techniques to analyse gaseous and particulate organic compounds in the atmosphere The aim is to provide an authoritative review to address the needs of both graduate students and active researchers in the field of atmospheric chemistry research

Organic Chemistry of the Atmosphere Lee D. Hansen, Delbert J. Eatough, 1991-06-24 This volume reviews the information currently available regarding the chemistry of organic compounds in the atmosphere Topics discussed include methods for collecting organic compounds from the atmosphere the influence of organic compounds on indoor and outdoor air quality the chemistry of polycyclic aromatic hydrocarbons environmental tobacco smoke organic compounds in rainwater organic oxysulfur compounds and the effect of organic compounds on visibility Many of these topics presented have never been reviewed or have never appeared together in a single volume Anyone concerned with atmospheric organic compound monitoring or who conducts research on organic compounds and their effect on the atmospheric environment will find this book to be extremely beneficial
