Project Plowshare The Development Of The:

Project Plowshare Ralph Sanders, 1962 **Project Plowshare** Scott Kaufman, 2012-11-20 Inspired by President Dwight D Eisenhower's Atoms for Peace speech scientists at the Atomic Energy Commission and the University of California's Radiation Laboratory began in 1957 a program they called Plowshare. Joined by like minded government officials scientists and business leaders champions of peaceful nuclear explosions maintained that they could create new elements and isotopes for general use build storage facilities for water or fuel mine ores increase oil and natural gas production generate heat for power production and construct roads harbors and canals. By harnessing the power of the atom for nonmilitary purposes Plowshare backers expected to protect American security defend U S legitimacy and prestige and ensure access to energy resources. Scott Kaufman's extensive research in nearly two dozen archives in three nations shows how science politics and environmentalism converged to shape the lasting conflict over the use of nuclear technology. Indeed despite technological and strategic promise Plowshare's early champions soon found themselves facing a vocal and powerful coalition of federal and state officials scientists industrialists environmentalists and average citizens. Skeptical politicians domestic and international pressure to stop nuclear testing and a lack of government funding severely restricted the program. By the mid 1970s Plowshare was in the words of one government official dead as a doornail. However the thought of using the atom for peaceful purposes remains alive.

The Politics of Energy Research and Development John Byrne, Daniel Rich, 1986-01-01 The Politics of Energy Research and Development examines and evaluates U S research and development policies to promote nuclear solar conservation and other technology options. This volume is the third in the series Energy Policy Studies which explores fundamental long term social political and economic dimensions of energy technology resources and use. Contributions represent a wide range of theoretical and policy perspectives including sociology economics political science urban and regional studies environmental analysis and history and philosophy of technology.
