Global Warming Frances Drake, 2014-05-01 This topical textbook provides a bridge between technical and popular texts on global warming within the broader context of climate change Written at an introductory level it explains the interacting components of this system what the greenhouse effect is and how scientists seek to predict climate change It makes accessible the technical and heavy

science literature to the non science student Global warming is one of the major environmental problems facing the world today But it is an issue surrounded by great contention because it is based largely on scientific prediction and has yet to be proven Opinion is divided regarding whether global warming will occur and if it does what the effects will be In order to appreciate the uncertainties surrounding this issue it is necessary to understand the workings of the climate system and the methods by which scientists seek to predict climate change Global Warming aims to make accessible the heavily technical literature to the non science student providing a bridge between the highly scientific and the popular non academic texts Placing global warming within the broader context of climate change this textbook details the interacting components of the climatic system reviewing the importance of changing carbon dioxide levels for the evolution of the Earth s atmosphere and climate Utilising observed and modelled data it presents the latest evidence for and against global warming whilst highlighting the difficulties involved with analysing both types of data and introducing areas of controversy within research The book also addresses the important problem of making policy decisions for the future based on the uncertain science of global warming International Aerospace Abstracts ,1996 **Toward Understanding Climate Change** Uwe Radok,2019-03-15 This book illustrates the intricacies and interdependencies of our climate system the sea ice of the polar regions and the chaotic weather systems of middle latitudes It discusses the objective evaluation of climate forecasts and the problems of modeling the climate and its changes *Earth Science: Weather, water, and the atmosphere* James A. Woodhead,2001 Presents cross referenced essays on basic topics related to planetology and Earth from space each essay includes an annotated bibliography
