are chosen so that the broader implications of fundamental systemic change are identified and addressed. Additionally, an important consideration with many of these technologies is that even if they are initially designed and intended for military or security applications, they inevitably spread to civil society where their application may raise very different ethical questions around such core values as privacy, security from criminal behaviour, and state police power. Accordingly, this volume is of interest to students of military or security domains as well as to those interested in technology and society and the philosophy of technology.

Dimensions of Peace and Security Gustaaf Geeraerts, Natalie Pauwels, Éric Remacle, 2006
The terrorist attacks of September 11th 2001 on the United States provoked a significant shift in thinking about peace and security, and much has since been written about new security threats and challenges. This collection of essays revisits some of the more traditional concepts of peace and security that remain valid and pertinent today despite having ceded much of the limelight to the major security preoccupations of the current era: international terrorism, weapons of mass destruction, rogue states, and related phenomena. The book covers numerous salient topics from arms production, monitoring and control to disarmament and conversion, through to peacekeeping and conflict prevention. The contributions differ in scope, form, and analysis, ranging from historical and philosophical to contemporary and political perspectives and approaches to peace and security.
