Seeds Ecology Biogeography And Evolution Of Dormancy And Germination:

Seeds Carol C. Baskin, Jerry M. Baskin, 2001 *Seeds Ecology Biogeography and Evolution of Dormancy and Germination* provides a working hypothesis of the ecological and environmental conditions under which various kinds of seed dormancy have developed. It also presents the seed germination of more than 3500 species of trees, shrubs, vines, and herbaceous species.

Seeds Carol C. Baskin, Jerry M. Baskin, 1998-06-11 *Seeds Ecology Biogeography and Evolution of Dormancy and Germination* differs from all other books on seed germination. It is an all-encompassing volume that provides a working hypothesis of the ecological and environmental conditions under which various kinds of seed dormancy have developed. It also presents information on the seed germination of more than 3500 species of trees, shrubs, vines, and herbaceous species, making this a valuable reference for anyone studying germination. This book delivers information on characteristics of each type of seed dormancy, how each type of dormancy is broken in nature, and what environmental conditions are required for germination after dormancy is broken. It explains how studies should be done to distinguish persistent from transient seed banks and covers which species should be controlled, propagated, and conserved. *Seeds* gives the reader insight and guidelines for doing ecologically meaningful studies on the biogeography and evolution of seed dormancy and germination in order to better understand plant reproductive strategies, life history traits, adaptations to habitats, and physiological processes. Evolutionary phylogenetic origins and relationships of various kinds of seed dormancy. A world biogeographical perspective on seed dormancy and germination. Ecophysiology of seeds with each type of dormancy. Critical evaluation of methodology used in soil seed bank studies. Germination ecology of plants with specialized habitat and life cycle types. Genetic and maternal preconditioning effects on seed dormancy and germination. Guidelines for doing ecologically meaningful germination studies.

Chrispeels, David E. Sadava, 2003 This book integrates many fields to help students understand the complexity of the basic science that underlies crop and food production *Adaptation and Fitness in Animal Populations* Julius van der Werf, Hans-Ulrich Graser, Richard Frankham, Cedric Gondro, 2008-10-17 Fitness and adaptation are fundamental characteristics of plant and animal species enabling them to survive in their environment and to adapt to the inevitable changes in this environment This is true for both the genetic resources of natural ecosystems as well as those used in agricultural production Extensive genetic variation exists between varieties breeds in a species and amongst individuals within breeds This variation has developed over very long periods of time A major ongoing challenge is how to best utilize

this variation to meet short term demands whilst also conserving it for longer term possible use Many animal breeding programs have led to increased performance for production traits but this has often been accompanied by reduced fitness In addition the global use of genetic resources prompts the question whether introduced genotypes are adapted to local production systems Understanding the genetic nature of fitness and adaptation will enable us to better manage genetic resources allowing us to make efficient and sustainable decisions for the improvement or breeding of these resources This book had an ambitious goal in bringing together a sample of the world s leading scientists in animal breeding and evolutionary genetics to exchange knowledge to advance our understanding of these vital issues **Indian Sandalwood** A. N. Arunkumar, Geeta Joshi, Rekha R. Warriar, N. Nataraja Karaba, 2022-01-11 i This book provides a global perspective of Indian Sandalwood categorized as Vulnerable by the International Union for Conservation of Nature It deals with history distribution propagation chemistry utilization improvement trade and conservation in the present context This book explores ways and means for restoring its past glory by creating awareness for its conservation and sustainable utilization The content encompasses informative tables appropriate graphs and figures and illustrations with photographs and line drawings This compendium would be useful for foresters forestry professionals botanists policymakers conservationists NGOs and researchers in the academia and the industry sectors Plant Ecology in the Middle East Ahmad Hegazy, Jonathan Lovett-Doust, 2016-01-14 This advanced textbook explores the intriguing flora and plant ecology of the Middle East framed by a changing desert landscape global climate change and the arc of human history This vast region has been largely under recognized under studied and certainly under published due in part to the challenges posed to research by political disputes and human conflict and a treatise on the subject is now timely The book integrates Middle Eastern plant geography and its major drivers geo tectonics seed and fruit dispersal plant functional types etc with the principles of plant ecology The authors include the many specialized adaptations to desert and dryland ecosystems including succulence water conserving photosynthesis and a remarkable range of other life history strategies They explore the formation of climate relicts and describe the long history of domestication in the region together with the many reciprocal effects of agriculture on plant ecology The book concludes by discussing conservation in the region highlighting five regional biodiversity hotspots where the challenges of desertification habitat loss and other threats to plant biodiversity are particularly acute Plant Ecology in the Middle East is a timely synthesis of the field setting a new baseline for future research It will be important reading for both undergraduate and graduate students taking courses in plant ecology evolution systematics biodiversity and conservation and will also be of interest and use to a professional audience of botanists conservation biologists and practitioners working in dryland ecosystems **Advances in Seed Biology** Jose C. Jimenez-Lopez, 2017-12-06 The seed can be considered the most important plant reproductive element as a dispersal unit for a successful reproduction in all gymnosperms and flowering plants The formation of the seed is part of the process of reproduction in seed plants starting with a mature ovule

and following with the fertilization by pollen and some growth within the mother plant to the final outcome of an embryo developed from the zygote the seed coat from the integuments of the ovule and a nurturing endosperm in several species Thanks to this key element as it is the seed the spermatophytes now dominate all types of biological niches on land from forests to grasslands both in hot and cold climates In this metadata information era we have the chance for a deeper understanding of seed physiological and developmental processes in order to provide the fundamental basis for making plant seed biology research relevant and productive coping with future challenges

Conservation Translocations Martin J. Gaywood, John G. Ewen, Peter M. Hollingsworth, Axel Moehrenschrager, 2022-12-22 Conservation translocation the movement of species for conservation benefit includes reintroducing species into the wild reinforcing dwindling populations helping species shift ranges in the face of environmental change and moving species to enhance ecosystem function Conservation translocation can lead to clear conservation benefits and can excite and engage a broad spectrum of people However these projects are often complex and involve careful consideration and planning of biological and socio economic issues This volume draws on the latest research and experience of specialists from around the world to help provide guidance on best practice and to promote thinking over how conservation translocations can continue to be developed The key concepts cover project planning biological and social factors influencing the efficacy of translocations and how to deal with complex decision making This book aims to inspire inform and help practitioners maximise their chances of success and minimise the risks of failure

Spengler III, 2025-05-06 The 15 000 year story of how grass seduced humanity into being its unwitting labor force and the science behind it Domesticated crops were not human creations and agriculture was not simply invented As Robert N Spengler shows domestication was the result of an evolutionary process in which people played a role only unwittingly and as actors in a numberless cast that spanned the plant and animal kingdoms *Nature's Greatest Success* is the first book to bring together recent scientific discoveries and fascinating ongoing research to provide a systematic account of not only how agriculture really developed but why Through fifteen chapters this book dives deep into the complex processes that drove domestication and the various roles that plants and animals including humans played in bringing about those changes At the intersection of popular history archaeology and evolutionary biology *Nature's Greatest Success* offers a revolutionary account of humanity not at the apex of nature but deeply embedded in the natural world and the evolutionary processes that continue to guide it even today
