Naval Facilities Engineering Command,1972 **Structural Analysis and Design of Tall Buildings** Bungale S. Taranath,2016-04-19 As software skills rise to the forefront of design concerns the art of structural conceptualization is often minimized Structural engineering however requires the marriage of artistic and intuitive designs with mathematical accuracy and detail Computer analysis works to solidify and extend the creative idea or concept that might have started out as a sketch on the back of an envelope From Sketches on the Back of an Envelope to Elegant Economical Buildings The Art of Structural Conceptualization Bridging the gap between the conceptual approach and computer analysis Structural Analysis and Design of Tall Buildings Steel and Composite Construction integrates the design aspects of steel and composite buildings in one volume Using conceptual thinking and basic strength of material concepts as foundations the book shows engineers how to use imperfect

information to estimate the answer to larger and more complex design problems by breaking them down into more manageable pieces Written by an accomplished structural engineer this book discusses the behavior and design of lateral load resisting systems the gravity design of steel and composite floors and columns and methods for determining wind loads It also examines the behavior and design of buildings subject to inelastic cyclic deformation during large earthquakes with an emphasis on visual and descriptive analysis as well as the anatomy of seismic provisions and the rehabilitation of seismically vulnerable steel buildings Intuitive Techniques for Construction and Design The book covers a range of special topics including performance based design and human tolerance for the wind induced dynamic motions of tall buildings It also presents preliminary analysis techniques graphical approaches for determining wind and seismic loads and graphical aids for estimating unit quantity of structural steel The final chapter deals with the art of connection design Forty case studies from New York s Empire State Building to Kuala Lumpur s Petronas Towers highlight the aspects of conceptualization that are key in the design of tall and ultra tall buildings A comprehensive design reference this book guides engineers to visualize conceptualize and realize structural systems for tall buildings that are elegant and economical

Series: Designing for Earthquakes - A Manual for Architects Federal Emergency Agency,U. S. Department Security,2013-04-14 Earthquakes in the United States are regional in their occurrence and while California is famous for its earthquake other states such as Texas have much less concern for the threat of temblors However architectural practice is becoming increasingly national and global and the architect in Texas may find that the next project is in California Thus it has become necessary for the professional architect to have some knowledge of the earthquake problem and how design seeks to control it Designing for Earthquakes a Manual for Architects is intended to explain the principles of seismic design for those without a technical background in engineering and seismology The primary intended audience is that of architects and includes practicing architects architectural students and faculty in architectural schools who teach structures and seismic design For this reason the text and graphics are focused on those aspects of seismic design that are important for the architect to know Because of its non technical approach this publication will also be useful to anyone who has an interest and concern for the seismic protection of buildings including facility managers building owners and tenants building committee participants emergency service personnel and building officials Engineers and engineering students will also gain from this discussion of seismic design from an architectural viewpoint The principles discussed are applicable to a wide range of building types both new and existing The focus is on buildings that are designed by a team that includes architects engineers and other consultants
