## Selected Constants Relative To Semi Cond:

**Selected Constants Relative to Semi-Conductors** P Aigrain, Minko Balkanski, 2013-10-02 Selected Constants Relative to Semi Conductors presents the physical constants of semiconductors in Table form The values of the electronic properties of semiconductors presented in the Table are parameters intended for use in theoretical and phenomenological equations relative to the band theory for these materials In addition to data specific to band structure the Table also includes mobilities of electrons and holes and their variation with temperature Data of a general physical character are also presented since the researcher very often finds use for values of this type The following quantities are given when available symmetry group and crystal parameters refractive index dielectric constant effective ionic charge work function photoemission work function piezoresistance coefficient elastic coefficients phonon temperature Debye temperature magnetic susceptibility coefficient of linear expansion fusion temperature sublimation temperature specific heat at constant pressure latent heat of fusion latent heat of sublimation thermal conductivity disorder factor and density *Semiconductors* T. I. Fistul, 2012-12-06 Recently there has been a considerable upsurge of interest in heavily doped semiconductors This interest is due primarily to the expanding range of applications of such materials Moreover the heavy

doping of semiconductors produces new effects the formation of impurity aggregates the appearance of allowed states in the forbidden band etc J which are of great interest in solid state physics The rapid growth in the number of papers on heavily doped semiconductors makes it difficult to review the results obtained so far Therefore many investigations carried out in 1966 7 particularly those on IIIIV semiconductors are not discussed in the present monograph which represents the state of the knowledge in 1965 Nevertheless the author hopes that in spite of this the book will be useful An attempt is made first to review investigations of heavily doped semiconductors from a certain viewpoint and secondly to suggest some ideas Chap 5 which may be controversial but which are intended to stimulate further studies of heavily doped semiconductors which can be regarded as a special case of disordered systems The work of American scientists investigating heavily doped semiconductors in particular the efforts of E O Kane J 1 Pan kove R N Hall R A Logan W G Spitzer F A Trumbore and many others is well known to Soviet investigators It gives me pleasure to learn that Western readers will now have an opportunity to become acquainted with the work done in the USSR

*High Concentrator Photovoltaics* Pedro Pérez-Higueras, Eduardo F. Fernández, 2015-08-04 The aim of this book is to provide a comprehensive overview of the fundamentals and engineering of high concentrator photovoltaic HCPV technology and to elucidate how this complex and emerging technology is applied in power plants It is the first of its kind to focus exclusively on HCPV technology and offers a valuable reference volume to readers This book is the result of an international collaboration among experts and each chapter is written by a specialist in the field The conversion of solar energy to electricity plays an important role in power generation and HCPV is signalled by many researchers and professionals as one of the most promising sources of solar power Therefore this book provides an important resource for companies research institutes and universities to assist with the understanding of fundamentals different applications and potential of such technology
