Visual Cognition: Visual Selective Attention Bundesen., Bundesen, 1998-03 This volume traces the modern critical and performance history of this play one of Shakespeare's most loved and most performed comedies The essay focus on such modern concerns as feminism deconstruction textual theory and queer theory

Attention in Vision A.H.C. van der Heijden, 2004-03 Aims to identify address and solve some major problems and issues in the psychology of visual perception attention and intentional control

Three Paradigms for Selective Attention in Vision Serap Yiğit Elliott, 2012 The first study investigated the underlying mechanisms of selective attention and the extent of which an irrelevant stimulus is processed as well as the nature of this processing A spatial filtering paradigm was used to quantify the effects of an irrelevant stimulus in a selective attention task Chapter 1 The results have shown that if the task requires observers to constrain their attention to a small spatial area a blocking mechanism is used for selection In blocking unattended stimuli are blocked from further processing If the task requires observers to distribute their attention to a large spatial area an attenuation mechanism is used for selection In attenuation the unattended stimuli are reduced in strength but at high intensities e.g. high contrast they can still have access to further processing In the second study the same paradigm was used with the combination of many to one response mapping of the flanker paradigm to unravel the nature of the effects of irrelevant stimuli on the judgment of a relevant stimulus Chapter 2 The results have shown that the effects of irrelevant stimuli are consistent with a failure of selection which is an example of blocking mechanism

Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e.g. focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e.g. awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and

consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

Attention Neville Moray, 2017-03-27 The early years of modern experimental psychology were marked by a considerable amount of research on attention and much work was carried out in the laboratories of Wundt Titchener and Helmholtz For various reasons research on attention declined from 1920 until the 1950s Under the early philosophy of behaviourism attention became suspect as a mentalistic concept At the time of original publication in 1969 however much work had been done to quantify and make objective research in this area This was of increasing importance in a world dominated by communication networks and man machine systems in which the human element is the weakest link due to the limits on the rate at which man can handle information Following the publication of Broadbent's Perception and Communication in 1958 work on attention had begun to pour from an ever increasing number of laboratories This book is dedicated to summarising what we knew and attempts to survey the behavioural research in vision and hearing which throw light on how we share and direct attention what are the limits of attention to make some general methodological recommendations to review current theories of the time and to provide a guide to the relevant physiological

work As far as possible work on memory has been omitted A bibliography of the major work to the spring of 1969 is included

Robot Vision Reinhard Klette, Shmuel Peleg, 2001-02-05 On behalf of the organizers we would like to welcome all participants to the Robot Vision 2001 workshop Our objective has been to bring together searchers in robot vision and to promote interaction and debate Participants of the workshop come from Europe US the Middle East the Far East and of course from New Zealand Fifty two papers were submitted to the workshop and each paper was thoroughly reviewed by at least three reviewers Seventeen papers were selected for oral presentation and seventeen papers were selected for poster presentation There were no invited technical papers to give all participants the sense of equal opportunity The technical scope of the workshop is very wide and includes presentations on motion analysis 3D measurements calibration navigation object recognition and more The schedule of the workshop was therefore prepared to allow in addition to the technical presentation ample time for discussions and interaction
