Critical Mineral Resources of the United States K. J. Schulz,John H. DeYoung,Robert R. Seal,Dwight C. Bradley,2017
As the importance and dependence of specific mineral commodities increase so does concern about their supply The United
States is currently 100 percent reliant on foreign sources for 20 mineral commodities and imports the majority of its supply
of more than 50 mineral commodities Mineral commodities that have important uses and face potential supply disruption are
critical to American economic and national security However a mineral commodity s importance and the nature of its supply
chain can change with time a mineral commodity that may not have been considered critical 25 years ago may be critical
today and one considered critical today may not be so in the future The U S Geological Survey has produced this volume to
describe a select group of mineral commodities currently critical to our economy and security For each mineral commodity
covered the authors provide a comprehensive look at 1 the commodity s use 2 the geology and global distribution of the
mineral deposit types that account for the present and possible future supply of the commodity 3 the current status of
production reserves and resources in the United States and globally and 4 environmental considerations related to the
commodity s production from different types of mineral deposits The volume describes U S critical mineral resources in a
global context for no country can be self sufficient for all its mineral commodity needs and the United States will always rely
on global mineral commodity supply chains This volume provides the scientific understanding of critical mineral resources
required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable
supply of mineral commodities **Occupational Health Guidelines for Chemical Hazards** ,1978 **Medical and
