Self-organized Complexity in the Physical, Biological, and Social Sciences Donald Lawson Turcotte, John Rundle, Hans Frauenfelder, 2002 **Self-organized Complexity in the Physical, Biological, and Social Sciences** Donald Lawson Turcotte, John B. Rundle, 2002 **Sackler NAS Colloquium Self-Organized Complexity in the Physical, Biological, and Social Sciences**, 2002 Self-Organized Criticality in Astrophysics Markus Aschwanden, 2011-01-11

Markus Aschwanden introduces the concept of self organized criticality SOC and shows that due to its universality and ubiquity it is a law of nature for which he derives the theoretical framework and specific physical models in this book He begins by providing an overview of the many diverse phenomena in nature which may be attributed to SOC behaviour The author then introduces the classic lattice based SOC models that may be explored using numerical computer simulations These simulations require an in depth knowledge of a wide range of mathematical techniques which the author introduces and describes in subsequent chapters These include the statistics of random processes time series analysis time scale distributions and waiting time distributions Such mathematical techniques are needed to model and understand the power law like occurrence frequency distributions of SOC phenomena Finally the author discusses fractal geometry and scaling laws before looking at a range of physical SOC models which may be applicable in various aspects of astrophysics Problems solutions and a glossary will enhance the pedagogical usefulness of the book SOC has been receiving growing attention in the astrophysical and solar physics community This book will be welcomed by students and researchers studying complex critical phenomena *Hierarchy in Natural and Social Sciences* Denise Pumain, 2006-02-09 Hierarchy is a form of organisation of complex systems that rely on or produce a strong differentiation in capacity power and size between the parts of the system It is frequently observed within the natural living world as well as in social institutions According to the authors hierarchy results from random processes follows an intentional design or is the result of the organisation which ensures an optimal circulation of energy for information This book reviews ancient and modern representations and explanations of hierarchies and compares their relevance in a variety of fields such as language societies cities and living species It throws light on concepts and models such as scaling laws fractals and self organisation that are fundamental in the dynamics and morphology of complex systems At a time when networks are celebrated for their efficiency flexibility and better social acceptance much can be learned about the persistent universality and adaptability of hierarchies and from the analogies and differences between biological and social organisation and processes This book addresses a wide audience of biologists and social scientists as well as managers and executives in a variety of institutions **Intelligent Complex Adaptive Systems** Yang, Ang, Shan, Yin, 2008-03-31 This book explores the foundation history and theory of intelligent adaptive systems providing a fundamental resource on topics such as the emergence of intelligent adaptive systems in social sciences biologically inspired artificial social systems sensory information processing as well as the conceptual and methodological

issues and approaches to intelligent adaptive systems Provided by publisher

Mystery Of Time, The: Asymmetry Of Time And Irreversibility In The Natural Processes Alexander Leonidovich Kuzemsky, 2022-10-14 The book focuses on the study of the temporal behavior of complex many particle systems The phenomenon of time and its role in the temporal evolution of complex systems is a remaining mystery The book presents the necessity of the interdisciplinary point of view regarding on the phenomenon of time The aim of the present study is to summarize and formulate in a concise but clear form the trends and approaches to the concept of time from a broad interdisciplinary perspective exposing tersely the complementary approaches and theories of time in the context of thermodynamics statistical physics cosmology theory of information biology and biophysics including the problem of time and aging Various approaches to the problem show that time is an extraordinarily interdisciplinary and multifaceted underlying notion which plays an extremely important role in various natural complex processes

Complex Systems Studies Rzevski, G., Brebbia, C. A., 2018-02-06 Containing selected papers on the fundamentals and applications of Complexity Science this multi disciplinary book presents new approaches for resolving complex issues that cannot be resolved using conventional mathematical or software models Complex Systems problems can occur in a variety of areas such as physical sciences and engineering the economy the environment humanities and social and political sciences Complexity Science problems the science of open systems consisting of large numbers of diverse components engaged in rich interaction can occur in a variety of areas such as physical sciences and engineering the economy the environment humanities and social and political sciences The global behaviour of these systems emerges from the interaction of constituent components and is unpredictable but not random The key attribute of Complex Systems is the ability to self organise and adapt to unpredictable changes in their environment

Prestate Societies of the North Central European Plains Ludomir R Lozny, 2013-04-16 This volume offers a new perspective on social dynamics and culture change in the North Central European Plains NCEP from 600 to 900 CE It discusses long term causal processes leading to the formation of state at the fringes of the Merovingian and Frankish Kingdoms the Carolingian and the Holy Roman Empire the Scandinavian Kingdoms the Czech Kingdom and the Kingdom of Rus The central problem addressed is how to account for and explain the transition from noncomplex to supra tribal polities between 600 and 900 CE The examined evidence shows that a very basic community level management of common pool resources seems a successful strategy to manage short term risk and may lead to sustainable higher level political organization In conclusion it present a models of social dynamics of the NCEP 600 900 CE that suggests that the state formation process was an outcome of spontaneous processes and deterministic factors occurring within a period of approximately 400 years of which the last two hundred years 800 900 CE were the most critical In a broader context the point discussed is that decisions with short term goals have long term consequences
