Machine Called Indomitable:

A Machine Called Indomitable Sonny Kleinfield, 2014-04-29 The true story of the doctor who invented the MRI A fascinating account of how a significant medical development came about The New York Times Dr Raymond Damadian was plagued with a mysterious and persistent stomach pain yet physicians assured him that they could find nothing wrong To find the answer to his ailment Damadian would spend the ensuing twelve years building a machine that would change medicine Nuclear magnetic resonance scanning now called magnetic resonance imaging MRI was a revolution a safe means to determine the makeup of every cell in the human body distinguishing healthy cells from sick Although Damadian's ideas were met with skepticism and outright opposition from the medical community this machine would go on to save the lives of millions by diagnosing disease while effective treatment was still possible In short it was a medical miracle The story of Damadian's quest battling skeptical peers money troubles and more with an intensity approaching obsession is one of the great legends of medical research Sonny Kleinfield acclaimed reporter and author captures Damadian's remarkable triumph against the odds with compassion and a keen eye *A Machine Called Indomitable* is scientific storytelling at its finest

Imperial Technoscience Amit Prasad, 2014-03-14 A study of science and technology practices that shows how even emergent aspects of research and development remain entangled with established hierarchies In the last four decades during which magnetic resonance imaging MRI has emerged as a cutting edge medical technology and a cultural icon technoscientific imaginaries and practices have undergone a profound change across the globe Shifting transnational geography of technoscientific innovations is making commonly deployed Euro West centric divides such as west versus non west or innovating north versus non innovating south increasingly untenable the world is indeed becoming flatter Nevertheless such dualist divides which are intimately tied to other dualist categories that have been used to describe scientific knowledge and practice continue to undergird analyses and imaginaries of transnational technoscience *Imperial Technoscience* puts into broad relief the ambivalent and contradictory folding of Euro west centrism with emergent features of technoscience It argues Euro West centric historicism and resulting over determinations not only hide the vibrant albeit hierarchical transnational histories of technoscience but also tell us little about shifting geography of technoscientific innovations The book utilizes a deconstructive empirical approach to explore entangled histories of MRI across disciplines physics chemistry medicine etc institutions university hospitals industry etc and nations United States Britain and India Entangled histories of MRI it shows better explain emergence and consolidation of particular technoscientific trajectories and shifts in transnational geography of science and technology e g centers and peripheries **Naked to the Bone** Bettyann Kevles, 1997 By the late 1960s the computer and television were linked to produce medical images that were as startling as Roentgen's original X rays Computerized tomography CT and magnetic resonance imaging MRI made it possible to picture soft tissues invisible to ordinary X rays Ultrasound allowed expectant parents to see their unborn children Positron

emission tomography PET enabled neuroscientists to map the brain In this lively history of medical imaging the first to cover the full scope of the field from X rays to MRI assisted surgery Bettyann Kevles explores the consequences of these developments for medicine and society Through lucid prose vivid anecdotes and more than seventy striking illustrations she shows how medical imaging has transformed the practice of medicine from pediatrics to dentistry neurosurgery to geriatrics gynecology to oncology Beyond medicine Kevles describes how X rays and the newer technologies have become part of the texture of modern life and culture They helped undermine Victorian sexual sensibilities gave courts new forensic tools provided plots for novels and movies and offered artists from Picasso to Warhol new ways to depict the human form

Prize Fight Morton Meyers, M.D., 2012-06-05 We often think of scientists as dispassionate and detached nobly laboring without any expectation of reward But scientific research is much more complicated and messy than this ideal and scientists can be torn by jealousy impelled by a need for recognition and subject to human vulnerability and fallibility In Prize Fight Emeritus Chair at SUNY School of Medicine Morton Meyers pulls back the curtain to reveal the dark side of scientific discovery From allegations of stolen authorship to fabricated results and elaborate hoaxes he shows us how too often brilliant minds are reduced to petty jealousies and promising careers cut short by disputes over authorship or fudged data Prize Fight is a dramatic look at some of the most notable discoveries in science in recent years from the discovery of insulin which led to decades of infighting and even violence to why the 2003 Nobel Prize in Medicine exposed how often scientific objectivity is imperiled

The Pioneers of NMR and Magnetic Resonance in Medicine James Mattson, Merrill Simon, 1996 A fascinating account of the dramatic history of a revolutionary medical breakthrough that began with the detection of magnetic resonance in molecular beams by Isidor Rabi

Inventors of Health and Medical Technology Heather S. Morrison, 2015-07-15 Ever year new technologies advance and improve societies Some of the most influential inventions have occurred in the health and medical field This book explores important inventors and the inventions that have influenced the medical industry such as the smallpox vaccine CT scanners and DNA cloning

Paul Lauterbur and the Invention of MRI M. Joan Dawson, 2013-08-23 The story behind the invention of the most important medical diagnostic tool since the X ray On September 2 1971 the chemist Paul Lauterbur had an idea that would change the practice of medical research Considering recent research findings about the use of nuclear magnetic resonance NMR signals to detect tumors in tissue samples Lauterbur realized that the information from NMR signals could be recovered in the form of images and thus obtained noninvasively from a living subject It was an unexpected epiphany he was eating a hamburger at the time Lauterbur rushed out to buy a notebook in which to work out his idea he completed his notes a few days later He had discovered the basic method used in all MRI scanners around the world and for this discovery he would share the Nobel Prize for Physiology or Medicine in 2003 This book by Lauterbur s wife and scientific partner M Joan Dawson is the story of Paul Lauterbur s discovery and the subsequent development of the most important medical diagnostic tool since the X ray With MRI Lauterbur

had discovered an entirely new principle of imaging Dawson explains the science behind the discovery and describes Lauterbur's development of the idea his steadfastness in the face of widespread skepticism and criticism and related work by other scientists including Peter Mansfield Lauterbur's Nobel co-recipient and Raymond Damadian who famously feuded with Lauterbur over credit for the ideas behind MRI She offers not only the story of one man's passion for his work but also a case study of how science is actually done a flash of insight followed by years of painstaking work Drive and Curiosity Istvan Hargittai,2010-04-13 What motivates those few scientists who rise above their peers to achieve breakthrough discoveries This book examines the careers of fifteen eminent scientists who achieved some of the most notable discoveries of the past century providing an insider's perspective on the history of twentieth century science based on these engaging personality profiles They include Dan Shechtman the 2011 Nobel laureate and discoverer of quasicrystals James D Watson the Nobel laureate and codiscoverer of the double helix structure of DNA Linus Pauling the Nobel laureate remembered most for his work on the structure of proteins Edward Teller a giant of the 20th century who accomplished breakthroughs in understanding of nuclear fusion George Gamow a pioneering scientist who devised the initially ridiculed and now accepted Big Bang In each case the author has uncovered a singular personality characteristic motivational factor or circumstance that in addition to their extraordinary drive and curiosity led these scientists to make outstanding contributions For example Gertrude B Elion who discovered drugs that saved millions of lives was motivated to find new medications after the deaths of her grandfather and later her fianc F Sherwood Rowland who stumbled upon the environmental harm caused by chlorofluorocarbons eventually felt a moral imperative to become an environmental activist Rosalyn Yalow the codiscoverer of the radioimmunoassay always felt she had to prove herself in the face of prejudice against her as a woman These and many more fascinating revelations make this a must read for everyone who wants to know what traits and circumstances contribute to a person's becoming the scientist who makes the big breakthrough *Magnetic Resonance Imaging of the Brain and Spine* Scott W.
