Marrow Protection Transduction Of Hematopoietic Cells With Drug Resistance Genes:

Marrow Protection J. R. Bertino, R. A. Stahel, S. Peters, 1999-07 Authored by experts in the field this volume provides a comprehensive review of the problems and opportunities in gene therapy focusing on the use of various drug resistance genes to provide protection of hematopoietic cells against drug toxicity General topics include basic principles of gene transfer optimizing conditions for gene transfer in hematopoietic cells and gene transfer in the nonmyeloablative host Specific chapters describe constructions and preclinical studies of specific genes that impart resistance to anticancer drugs when expressed in hematopoietic cells including MDR 1 mutated forms of human methylguanine DNA methyltransferase mutant forms of dihydrofolate reductase and thymidylate synthase dihydropyrimidine dehydrogenase and cytidine deaminase For successful transfer of drug resistance genes the possibility that they may be used as selectable markers and that marrow ablation may not be required are important considerations This book is especially timely as clinical trials with these drug resistance genes are expected to increase markedly in the next few years It should appeal to all interested in stem cell biology and gene therapy as well as clinicians who look forward to using this technology in their practice **Thomas'**

Lattime, Stanton L. Gerson, 2013-08-28 Gene therapy as a treatment for cancer is at a critical point in its evolution Exciting new developments in gene targeting and vector technology coupled with results from the first generation of preclinical and clinical studies have led to the design and testing of new therapeutic approaches The Third Edition of Gene Therapy of Cancer provides crucial updates on the basic and applied sciences of gene therapy It offers a comprehensive assessment of the field including the areas of suicide gene therapy oncogene and suppressor gene targeting immunotherapy drug resistance gene therapy and the genetic modification of stem cells Researchers at all levels of development from basic laboratory investigators to clinical practitioners will find this book to be instructive Cancer gene therapy like cancer therapy in general is evolving rapidly testing new concepts targets and pathways evoking new technologies and passing new regulatory hurdles Its essence however has not changed the hope and challenges of returning altered genes to normal using targeted gene expression to alter the function of both tumor and microenvironment and in some cases normal cells and delivering functionally important genes to specific cell types to increase sensitivity to killing or to protect normal cells from cancer therapies In some instances gene therapy for cancer forms a continuum from gene repair through the use of molecularly modified cells the use of viral and non viral vector based gene delivery to both tumor and tumor microenvironment the use of viral and gene based vaccines and development of new gene based therapeutics The unique mechanistically chosen vector platforms are at the heart of this technology because they allow for direct and selective cell death and transient to sustained delivery of vaccine molecules or molecules that affect the microenvironment vasculature or the immune response Explains the underlying cancer biology necessary for understanding proposed therapeutic approaches Presents in depth description of targeting systems and treatment strategies Covers the breadth of gene therapy approaches including immunotherapeutic drug resistance oncolytic viruses as well as regulatory perspectives from both the NCI and FDA

Animal Models of Cancer Predisposition Syndromes Hiroshi Hiai, Okio Hino, 1999 This book brings together some of the most recent advances made in the genetic analysis of cancer susceptibility using animal models Leading investigators in the field present model systems for studying cancers including liver and stomach cancer breast cancer myeloid leukemia retrovirus induced lymphoma pulmonary adenoma and familial adenomatous polyposis An overview of transgenic and gene knockout mice is given and in several chapters the implications of these findings for human cancers are discussed The book is recommended reading for all scientists and graduate students in experimental cancer research and cancer genomics
