Mars The Mystery Unfolds:

Mars Peter John Cattermole, 2001 In the wake of a flood of new data and images from several exploratory missions fascination with Mars has become even more intense than it was when Percival Lowell believed he had observed canals constructed by live Martians While we know that these never existed we do have evidence that Mars once had rivers shallow lakes glaciers huge active volcanoes and intense flooding In this book Peter Cattermole a geologist who has been studying the planet for many years captures the sense of continuing excitement about Mars and its history He builds his story on the foundations of his earlier book *Mars The Story of the Red Planet* Chapman Hall 1992 An immense amount of visual geochemical and physical data concerning the rocks landscape and weather is now available The new book draws on this wealth of new information providing a clear account of current scientific understanding of the Red Planet From publisher's description

Mars Allan B. Cobb, 2004-08-15 Presents scientific discoveries about the atmosphere size surface orbit and rotation of the Red Planet

Magnificent Mars Ken Croswell, 2003-10-21 Mars has long offered the prospect of another living world near Earth Although NASA's first spacecraft dashed visions of little green men tending canals recent voyages have painted a picture of an intriguing planet that may have once resembled Earth with warmth water and possibly life Mars may answer the great question Are we alone for if Mars like Earth gave rise to life then trillions of other worlds throughout the universe have surely done the same Harvard trained

astronomer Ken Croswell set the standard for elegance and eloquence with his stunning photographic triumph *Magnificent Universe Now* with insightful prose and astonishing images he presents the red planet's full glory in *Magnificent Mars* showing volcanoes taller than Mount Everest spiral shaped polar caps of ice and a canyon system that could stretch from Ohio to California Here is a concise synthesis of the latest research on Mars accompanied with the very best full color images expertly reprocessed to look even better than NASA's own versions from the Hubble Space Telescope Viking Pathfinder Mars Global Surveyor Mars Odyssey and other spacecraft Highlights include a foldout panorama of the Martian surface a never before published rainbow colored topographic map and a sequence showing a full rotation of Mars courtesy of the Hubble Space Telescope Many of these images have never appeared in a book before Few have ever looked so good In lyrical prose Dr Croswell weaves these stupendous images into a virtual tour of Mars by organizing them around the four elements Earth Air Fire and Water From the northern plains of Vastitas Borealis to the towering Olympus Mons and other volcanoes of the Tharsis bulge we explore the red planet's geology topography and surface From the frigid climate to the massive dust storms that can engulf the entire globe we examine the thin Martian atmosphere and the clues it preserves to the planet's wetter past And from the flood channels that spill into Chryse Planitia to the vast potential lakebed of ancient Hellas we see stunning images of ancient rivers and floods triggering speculation that a warm wet Mars may have given rise to life that survives to this day The tour concludes with a voyage to the planet's two potato shaped moons Phobos and Deimos complete with rainbow colored topographic maps Unique color coded tables on Mars its atmosphere its life history its moons and NASA missions to the planets appear in a useful reference section along with a glossary and suggestions for further reading With its large format superb images and compelling text *Magnificent Mars* is the next best thing to standing on the red planet itself In future years NASA will launch numerous missions to Mars and *Magnificent Mars* is the definitive guide to what these spacecraft will see Indeed the first human explorers to Mars may want to take a copy of *Magnificent Mars* aboard their spaceship
