**Martin Model 262 Convoy Fighter** Jared A. Zichek,2015-10-03 The Martin Model 262 was an unconventional turboprop VTOL aircraft proposal submitted to the US Navy s convoy fighter competition of 1950 which ultimately produced the Convair XFY 1 Pogo and Lockheed XFY 1 Salmon It was a swept wing aircraft with triple vertical tails powered by an Allison XT 40 A 8 turboprop engine driving 16 ft contra rotating propellers The launch and recovery system consisted of a hinged vertical platform mounted on a merchant ship The pilot approached the platform from the side and hovered vertically just in front of it attaching the aircraft to the platform with a retractable nosegear spike and landing on two small retractable wing gear The fighter was armed with four 20 mm cannon and was designed to protect convoy vessels from enemy air attack In addition to the basic Model 262 Martin also presented Modifications A B and C the configurations of which were even more unorthodox than the main proposal Finally the book examines the Model 262P a handsome scale demonstrator designed to verify the basic soundness of the concept This ebook features a comprehensive text and 56 high resolution illustrations including detailed schematics artist s impressions and speculative color profiles of these remarkable secret aircraft projects This is the author s second book covering the USN convoy fighter competition the first one being devoted to the Goodyear GA 28A B also available in the Google Play store and other bookstores worldwide

**Aircraft and Missile Systems** Marcelle Size Knaack,United States. Air Force. Office of Air Force History,1978 *Secret Wings of World War II* Lance Cole,2015-06-30 There are many myths and legends surrounding the advanced German aeronautical technology of the Second World War There are also facts and proven events Yet within these stories and behind these facts lie conspiracy theories mistaken assumptions and denials that seem to contradict the evidence So what really happened How far ahead were the German scientists And of even greater interest why and how There have been other books about advanced German wartime aeronautics yet few authors have fully examined the detail of the designs and their relevance to the fighter and bomber legends of the 1950s and 60s let alone the current crop of military and civil all wing or

blended wing aircraft This book charts the story from its origins through current day innovations and beyond into the all wing future of tomorrow

*The Cutting Edge* Mark A. Lorell, Hugh P. Levaux, Elizabeth Giddens, Jennifer Gross, Erik Moller, 1998-10-20 The proposition that innovation is critical in the cost effective design and development of successful military aircraft is still subject to some debate RAND research indicates that innovation is promoted by intense competition among three or more industry competitors Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry the authors here examine the history of the major prime contractors in developing jet fighters since World War II They make use of an extensive RAND database that includes nearly all jet fighters fighter attack aircraft and bombers developed and flown by U S industry since 1945 as well as all related prototypes modifications upgrades etc The report concludes that 1 experience matters because of the tendency to specialize and thus to develop system specific expertise 2 yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders and 3 dedicated military R D conducted or directly funded by the U S government has been critical in the development of new higher performance fighters and bombers
