

Neuropsychology of Consciousness

Introduction

- **Consciousness:**
 - Refers to a certain level of **mental alertness and attention**.
 - A subjective, personal reckoning of external and internal events, typically measured by a person's **verbal expression** of internal experiences.
- **Bisiach's Three Senses of Consciousness:**
 - **First Sense:** Involves **nonphysical entities** (e.g., the soul or immaterial mind).
 - **Second Sense:** The experience of **sensation, thought, or action**.
 - **Third Sense:** Monitoring internal representations.
- **Niedermeyer's Components of Consciousness:**
 - Includes **selective attentiveness, changes in mental states, and vigilance**.
- **Damasio's Types of Consciousness:**
 - **Core Consciousness:** A transient process generated as an organism interacts with an object, requiring **short-term memory** but not **working memory** or **language**.
 - **Extended Consciousness:** Arises from the **autobiographical self**, requiring **long-term memory**.
- **Neuropsychological Goal:**
 - To understand the **neural basis** of consciousness and how **brain damage** disrupts it.

Mind and Brain

- **Mind:**
 - Reflects **subjective experience** and consciousness of the brain and body's processes.
- **Brain Function:**
 - Controls and monitors the **nervous system** and responds to **physiological mechanisms** (e.g., **endocrine system**) to maintain **brain-body homeostasis**.
- **Automatic Processes:**
 - Many are **unconscious** but can become conscious (e.g., through **biofeedback**).
- **Blurring Boundaries:**
 - The distinction between **conscious** and **unconscious mind** is becoming less clear.

Anatomic Correlates of Consciousness

- **Historical Perspectives:**
 - **René Descartes** hypothesized that the **pineal gland** was the center of conscious experience.

Neuropsychology Of Consciousness:

The Neuropsychology of Consciousness A. D. Milner, M. D. Rugg, 2013-10-22 The Neuropsychology of Consciousness is based on a symposium entitled Consciousness and Cognition Neuropsychological Perspectives held at the University of St Andrews September 1990 The intention was to assemble a group of the major researchers at the forefront of this field The starting point for the symposium and for the book was the widespread realization that in several areas of human cognition e.g visual perception memory language comprehension and attention the severe and profound impairments due to brain damage that have been described over the past 150 years are often not absolute In particular the use of indirect methods of testing may reveal unsuspected preservation of capacities that are undetected by more traditional direct methods The book opens with a discussion of the epidemic of dissociations and how well the phenomena within either neuropsychology or within normal human experimental psychology map onto each other This is followed by separate chapters on topics such as blindsight covert visual processing in patients face recognition and awareness following brain injury and the relationship between the study of attention and the understanding of consciousness

Neuropsychology of Consciousness Silvia Savazzi, Anna Maria Berti, Juha Silvanto, Cecilia Guariglia, 2019-11-05 The Science of Consciousness Max Velmans, 2003-09-02 Psychology students are fascinated by consciousness but often find the topic puzzling This is probably because there are different ways within the discipline to approach it In *The Science of Consciousness* top researchers from each of the three main areas of study introduce their angle and lead the student through the basic debates and research to date ending with suggestions for further reading Max Velmans has structured this collection especially for use as a base for a course of lectures or seminars on consciousness *The Science of Consciousness* will rapidly become known as the best student text in this field for undergraduates graduates and lecturers

The Neuropsychology of Consciousness A. David Milner, Michael D. Rugg, 1992 Neuropsychology of Consciousness A. D. Milner, **Neuropsychology of the Sense of Agency** Michela Balconi, 2010-09-08 Not nothing without you but not the same Erich Fried 1979 How do I know that I am the person who is moving The neuroscience of action has identified specific cognitive processes that allow the organism to refer the cause or origin of an action to its agent This sense of agency has been defined as the sense that I am the one who is causing or generating an action or a certain thought in my stream of consciousness As such one can distinguish actions that are self generated from those generated by others giving rise to the experience of a self other distinction in the domain of action A tentative list of the features distinguishing the concept of agency includes awareness of a goal of an intention to act and of initiation of action awareness of movements a sense of activity of mental effort and of control and the concept of authorship However it remains unclear how these various aspects of action and agency are related to what extent they are dissociable and whether some are more basic than others Their sources remain to be specified and their relationship to action specification and action control mechanism is as yet unknown

interest to speech and language pathologists therapists and clinicians in this area *Consciousness* Antti Revonsuo, 2009-12-16 The study of consciousness is recognized as one of the biggest remaining challenges to the scientific community This book provides a fascinating introduction to the new science that promises to illuminate our understanding of the subject Consciousness covers all the main approaches to the modern scientific study of consciousness and also gives the necessary historical philosophical and conceptual background to the field Current scientific evidence and theory from the fields of neuropsychology cognitive neuroscience brain imaging and the study of altered states of consciousness such as dreaming hypnosis meditation and out of body experiences is presented Revonsuo provides an integrative review of the major existing philosophical and empirical theories of consciousness and identifies the most promising areas for future developments in the field This textbook offers a readable and timely introduction to the science of consciousness for anyone interested in this compelling area especially undergraduates studying psychology philosophy cognition neuroscience and related fields *Consciousness* , *Locating Consciousness* Valerie Gray Hardcastle, 1995 *Locating Consciousness* argues that our qualitative experiences should be aligned with the activity of a single and distinct memory system in our mind brain Spelling out in detail what we do and do not know about phenomenological experience this book denies the common view of consciousness as a central decision making system Instead consciousness is viewed as a lower level dynamical structure underpinning our information processing This new perspective affords novel solutions to a wide range of problems the absent qualia the binding problem the inverted spectra the specter of epiphenomenalism the explanatory gap the distinction between objective and subjective and the general skeptical doubts about the viability of the naturalist project itself Drawing on recent data in psychology and neuroscience *Locating Consciousness* also discusses when we become conscious and when we should think other animals are conscious Series A *The Neuropsychology of Mental Illness* Stephen J. Wood, Nicholas B. Allen, Christos Pantelis, 2009-10 Describes neuropsychological approaches to the investigation description measurement and management of a wide range of mental illnesses *The Cambridge Handbook of Consciousness* Philip David Zelazo, Morris Moscovitch, Evan Thompson, 2007-05-14 The *Cambridge Handbook of Consciousness* is the first of its kind in the field and its appearance marks a unique time in the history of intellectual inquiry on the topic After decades during which consciousness was considered beyond the scope of legitimate scientific investigation consciousness re emerged as a popular focus of research towards the end of the last century and it has remained so for nearly 20 years There are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and by juxtaposing them provides a comprehensive survey of this exciting field An authoritative desk reference which will also be suitable as an advanced textbook **Consciousness Lost and Found** Lawrence Weiskrantz, 1997-04-24 The phenomenon of consciousness is intrinsically related to one's awareness of one's self of time and of the physical world What then can be learned about consciousness from people who have suffered brain damage such as

amnesia which affects their awareness This is the question explored by Lawrence Weiskrantz a distinguished neuropsychologist who has worked with such patients over 30 years Written in an engaging and accessible style Consciousness Lost and Found provides a unique perspective on one of the most challenging issues in science today

Consciousness in Philosophy and Cognitive Neuroscience Antti Revonsuo, Matti Kamppinen, 2013-06-17 Consciousness seems to be an enigmatic phenomenon it is difficult to imagine how our perceptions of the world and our inner thoughts sensations and feelings could be related to the immensely complicated biological organ we call the brain This volume presents the thoughts of some of the leading philosophers and cognitive scientists who have recently participated in the discussion of the status of consciousness in science The focus of inquiry is the question Is it possible to incorporate consciousness into science Philosophers have suggested different alternatives some think that consciousness should be altogether eliminated from science because it is not a real phenomenon others that consciousness is a real higher level physical or neurobiological phenomenon and still others that consciousness is fundamentally mysterious and beyond the reach of science At the same time however several models or theories of the role of conscious processing in the brain have been developed in the more empirical cognitive sciences It has been suggested that non conscious processes must be sharply separated from conscious ones and that the necessity of this distinction is manifested in the curious behavior of certain brain damaged patients This book demonstrates the dialogue between philosophical and empirical points of view The writers present alternative solutions to the brain consciousness problem and they discuss how the unification of biological and psychological sciences could thus become feasible Covering a large ground this book shows how the philosophical and empirical problems are closely interconnected From this interdisciplinary exploration emerges the conviction that consciousness can and should be a natural part of our scientific world view *Classic Cases in Neuropsychology, Volume II* Chris Code, Yves Joanette, Andre Roch Lecours, Claus-W. Wallesch, 2013-01-11 From a contemporary perspective Classic Cases in Neuropsychology Volume II reviews important and significant cases described in historical and modern literature where brain damage has been sustained The single case study has always been of central importance to the discipline of neuropsychology Cognitive neuropsychology and cognitive neurolinguistics search for universal structures in thought processes and single patients are an important means to that end The role of the single case study in the historical development of the field and its increasing contribution to contemporary work is therefore recognised as crucial This follow up to the successful Classic Cases in Neuropsychology 1996 brings together more of the important case investigations which have shaped the way we think about the relationships between brain behaviour and cognition The book includes cases from the rich history of neuropsychology as well as important contemporary case studies in the fields of memory language and perception Some of the cases described are rare some are seminal in the field many were the first of their type to be described and gave rise to new theories and some are still controversial As in the first volume each chapter highlights the

relevance of the case to the development of neuropsychology and discusses the theoretical implication of the findings Classic Cases in Neuropsychology Volume II will be essential reading for students and researchers alike in the fields of neuropsychology and neuroscience It will also be of interest to speech and language pathologists therapists and clinicians in this area
