Redo Compendium Reverse Engineering For Software Maintenance:

   The REDO Compendium Henk Van Zuylen,1993-04-08 Assesses the benefits of reverse engineering as a workable strategy for software maintenance Describes and analyzes the methodological issues and tools which support reverse engineering explaining how and when the REDO method might best be employed Provides useful information for developing a cookbook of reverse engineering procedures tailor made for the individual company Gives advice on how CASE tools might be used to support the methodology   **Effective Software Maintenance and Evolution** Stanislaw Jarzabek,2007-05-07 With software maintenance costs averaging 50% of total computing costs it is necessary to have an effective maintenance program in place Aging legacy systems for example pose an especially rough challenge as veteran programmers retire and their successors are left to figure out how the systems operate This book explores program analyzers reve   Software Maintenance Management Alain April,Alain Abran,2012-04-20 This book explores the domain of software maintenance management and provides road maps for improving software maintenance organizations It describes full maintenance maturity models organized by levels 1 2 and 3 which allow for benchmarking and continuous improvement paths Goals for each key practice area are also provided and the model presented is fully aligned with the architecture and framework of software development maturity models of CMMI and ISO 15504 It is complete with case studies figures tables and graphs

   User-Centred Requirements for Software Engineering Environments David J. Gilmore,Russel L. Winder,Francoise Detienne,2013-06-29 The idea for this workshop originated when I came across and read Martin Zelkowitz s book on Requirements for Software Engineering Environments the proceedings of a small workshop held at the University of Maryland in 1986 Although stimulated by the book I was also disappointed in that it didn t adequately address two important questions Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers And thus was the decision made to organise this workshop which would explicitly address these two questions As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach Hence the workshop acquired two halves one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions technical and otherwise to these problems This scheme also provided a good format for bringing together those in the HeI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems

   Data Mining and Reverse Engineering Stefano Spaccapietra,Fred Maryanski,2013-03-14 Searching for Semantics Data Mining Reverse Engineering Stefano Spaccapietra Fred M aryanski Swiss Federal Institute of Technology University of Connecticut Lausanne Switzerland Storrs CT USA REVIEW AND FUTURE DIRECTIONS In the last few years database semantics research has turned sharply from a highly theoretical domain to one with more focus on practical aspects The DS 7

Working Conference held in October 1997 in Leysin Switzerland demon strated the more pragmatic orientation of the current generation of leading researchers The papers presented at the meeting emphasized the two major areas the discovery of semantics and semantic data modeling The work in the latter category indicates that although object oriented database management systems have emerged as commercially viable prod ucts many fundamental modeling issues require further investigation Today s object oriented systems provide the capability to describe complex objects and include techniques for mapping from a relational database to objects However we must further explore the expression of information regarding the dimensions of time and space Semantic models possess the richness to describe systems containing spatial and temporal data The challenge of in corporating these features in a manner that promotes efficient manipulation by the subject specialist still requires extensive development **Successful Evolution of Software Systems** Hongji Yang,Dr. Martin Ward,2003 Annotation Explores the feasibility of using techniques such as program transformation and program abstraction to re engineer and extend the life of an existing IT system The authors De Montfort University outline a program transformation based evolution workbench called FermaT the architecture of the wide spectrum language WSL and a process for evolving object oriented real time and parallel systems The final chapter presents six case studies that use FermaT and re engineering assistant tools to evolve from source code to specifications or to new source code in a different language Annotation copyrighted by Book News Inc Portland OR **Innovations and Advances in Computer Sciences and Engineering** Tarek Sobh,2010-03-10 Innovations and Advances in Computer Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Software Engineering Computer Engineering and Systems Engineering and Sciences Innovations and Advances in Computer Sciences and Engineering includes selected papers form the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2008 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2008 **Reverse Engineering and Software Maintenance** Kevin Lano,Howard Haughton,1994 *ZUM '98: The Z Formal Specification Notation* Jonathan P. Bowen,2013-10-22 As the complexity of embedded computer controlled systems increases the present industrial practice for their development gives cause for concern especially for safety critical applications where human lives are at stake The use of software in such systems has increased enormously in the last decade Formal methods based on firm mathematical foundations provide one means to help with reducing the risk of introducing errors during specification and development There is currently much interest in both academic and industrial circles concerning the issues involved but the techniques still need further investigation and promulgation to make their widespread use a reality This book presents results of research into techniques to aid the formal verification of mixed hardware software systems Aspects of system specification and verification from requirements down to the underlying hardware are addressed with particular regard to real time issues The work presented is largely based around the Occam programming language and Transputer microprocessor paradigm The HOL theorem prover based on higher order logic has mainly been used in the application of machine checked proofs The book describes research work undertaken on the collaborative UK DTI SERC funded Information Engineering Dictorate Safemos project The partners were Inmos Ltd Cambridge SRI the Oxford University Computing Laboratory and the University of Cambridge Computer Laboratory who investigated the problems of formally verifying embedded systems The most important results of the project are presented in the form of a series of interrelated chapters by project members and associated personnel In addition overviews of two other ventures with similar objectives are included as appendices The material in this book is intended for computing science researchers and advanced industrial practitioners interested in the application of formal

methods to real time safety critical systems at all levels of abstraction from requirements to hardware In addition material of a more general nature is presented which may be of interest to managers in charge of projects applying formal methods especially for safety critical systems and others who are considering their use
