## **Reduction Of Photoelectric Observations:**

*Publications of the United States Naval Observatory* United States Naval Observatory, 1971      **The Present and Future of the Telescope of Moderate Size** Frank Bradshaw Wood, 2016-11-11 Covering the astronomical work achieved with telescopes of moderate size this volume indicates how recent developments in electronics make it possible for these telescopes to cope with problems formerly attacked only by the largest instruments Because the future accomplishments of the telescopes of moderate size should be tremendously increased this book considers both what is being accomplished and what scientists may confidently expect to be able to do in the predictable future In searching for an appropriate topic for the symposium the astronomers who have contributed to this volume recognized that although much attention has been devoted in recent years to Schmidt type telescopes radio telescopes and very large instruments a great deal of the useful work has been and is being carried out by conventional telescopes of moderate size Especially in the fields of astrometry and photometry a rather large fraction of the observations are being made with telescopes within roughly an aperture range of twelve to forty inches Although perhaps the most exciting or novel results will be obtained with the giant reflectors much of our progress depends upon the unspectacular accumulation and discussion of data and within the limits of stellar magnitude to which they are suited the smaller instruments can contribute substantially meriting the definitive research provided in the pages of this book Outstanding scientists have contributed to this volume their findings in such matters as image tube development photoelectric problems in astronomy investigation of image detectors sensitivity assessment equivalent quantum efficiencies etc modern computing machines capable of solving photometric problems the Newton Lacy Pierce Photometer the infrared technique for stellar photometry application of the small telescope to photoelectric problems photoelectric studies of scintillation of starlight the upper atmosphere as discerned from studies of stellar scintillation variable star problems present and future and stellar spectroscopy with the moderate size telescope The result is a book of vital importance to the student of astronomy who wishes to understand the advances in his field made possible by electronic progress      *Publications* United States Naval Observatory, 1950      **Bulletin**, 1962      **Bulletin** Flagstaff (Ariz.). Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of

greater convenience for the user Volume 12 contains literature published in 1974 and received before March 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with volume 11 some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy **Bulletin** Lowell Observatory, 1962 **Relativistic Astrophysics Gravity-Wave Astronomy** A. Epchtein, A. Omont, W. B. Burton, P. Persi, 2012-12-06 Outstanding progress in near infrared detection technology and in real time image processing has led astronomers to start undertaking all sky surveys in the 1.2  $\mu\text{m}$  range project DENIS in Europe and 2MASS in the USA surveys which will have a considerable impact in various areas of astronomy This book gathers the contributions of more than 80 specialists involved in fields of interest as different as low mass stars late stages of stellar evolution star formation stellar populations of the Galaxy and the Magellanic Clouds the local structure of the Universe and observational cosmology It describes the impact on these fields of the exhaustive data bases and catalogs of stars and galaxies that these surveys will provide The considerable interest of these documents for the future of infrared space and ground based projects and the complementarity with other currently ongoing or planned surveys in other spectral ranges are emphasized **Astronomical Applications of Astrometry** M. A. C. Perryman, 2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature **Literature 1981, Part 2** S. of this meeting with these additions should provide a good reference book Page viii

**Galactic and Solar System Optical Astrometry** L. V. Morrison, G. F. Gilmore, Royal Greenwich Observatory, 1994-05-26 Astrometry the study of the positions of astronomical objects and how they move across the sky is a cornerstone of modern astronomy Pinning down the distances to and motions of stars in our Galaxy is fundamental it can lead to an understanding of the origin of these stars and how together they affect the evolution of our Galaxy Similarly measuring the motions of planets their satellites and asteroids is crucial to unravelling the origin and evolution of our solar system as well as to the planning of space missions to explore them A workshop held jointly by the Royal Greenwich Observatory and the Institute of Astronomy in Cambridge offered an unusual opportunity to bring together astronomers from the fields of Galactic and solar system astrometry Gathered in this volume are the articles they presented Together these provide an auspicious review of optical astrometry and our understanding of the evolution of the Galaxy and solar system for graduate students and researchers [Science Abstracts](#), 1913

*Solid State Astrophysics* N.C. Wickramasinghe, D.J. Morgan, 2012-12-06 Over the past decade the study of the formation and properties of interstellar grains has assumed a growing importance going much beyond what might have been guessed only a few years ago It has come to be understood that grains play a role in processes other than the simple absorption and scattering of starlight which was all that the astronomers of a generation ago considered to be their relevance Grains indeed play a critical role in controlling the temperature composition and states of aggregation of the whole interstellar medium Among the still mysterious problems is the origin of the vast clouds of obscuring material that is observed in radiogalaxies like NGC 5128 and M 82 which may well be associated with the explosions of very massive objects It is safe to say that from this growing field of study much still remains to be discovered The topics discussed in this volume will make clear to the reader the range and versatility of the subjects F HOYLE

FOREWORD by THE PRINCIPAL The Symposium on Solid State Astrophysics held in July 1974 brought to University College Cardiff a large and very distinguished gathering of astronomers It was the first time that such a collection of scholars absorbed with the problem of the systems of outer space had collected together in Wales and so provided a splendid spring board for the researches of the newly founded group of astronomers in the Department of Applied Mathematics and Astronomy at University College

**The Non-Sleeping Universe** Maria Teresa Vaz Torrão Lago, Alain Blanchard, 2012-12-06 The Non Sleeping Universe was a conference conceived to commemorate the opening of the new building of the Centro de Astrofísica da Universidade do Porto CAUP It seemed appropriate to include the two major areas of work at CAUP Stellar Astrophysics and Cosmology For the organizers the most obvious threading line would be activity Therefore the choice of the name and contents The conference lasted for one week the first three days dealing mainly with the non sleeping stars from Asteroseismology to Activity and Flows involving both young stars and the interstellar medium It included twenty five oral and thirty four poster

presentations and involved 52 participants The second part of the conference covered another three days and addressed non sleepiness at galactic scales and beyond From gamma ray bursts to the cosmic background radiation and cosmological models It included twenty three oral and sixteen poster presentations and involved 46 participants Activity was also the environment dominant note Only that this time of painters and builders rushing to finish the brand new building In any case it was a remarkable week with high level of excitement and interchange as expected from a Non Sleeping Universe Even if the Port wine in the cellars where the conference's dinner's took place seemed quite indifferent to all activity dormant or not in the amazingly large oak casks

**Advances in Astronomy and Astrophysics** Zdeněk Kopal, 2013-10-22 Advances in Astronomy and Astrophysics Volume 5 is a collection of papers that deals with the Zodiacal light three dimensional periodic oscillations the secular variation of mass and the evolution of binary systems Some papers discuss the periodicity of the sunspot groups as well as compact and dispersed cosmic matter One paper notes that the brightness of the zodiacal light continues to increase right up to the limb of the Sun where it merges with parts of the solar corona Another paper discusses analytically and numerically the three families of three dimensional motions where the members of each family pass very close to one of three equilibrium points One paper describes the loss of mass in the Sun as being 1 caused by electromagnetic or corpuscular radiation that occurs at a slow rate or 2 by an explosion of a nova or supernova One paper examines the periodicity of solar activities the physical conditions of sunspots chromospheric flares prominence and magnetic fields The paper notes that different periodicity laws govern the formation frequency and importance of spot groups The behavior of spot groups also depends on the periodicity process of solar activity The collection can prove valuable for astro physicists astronomers geochemists and mathematicians whose works involve cosmology and astronomy
