Contemporary Landscape Performance Methods and Techniques Galen Newman, Rui Zhu, Dongying Li, Megan Barnes, 2024-10-14 This book defines illustrates applies and explores current and future tools and methods for measuring landscape performance using the Houston Arboretum and Nature Center HANC as a case site providing the most extensive comprehensive description and application of existing landscape performance tools in the current literature to date Landscape performance is a measure of the effectiveness with which landscape solutions fulfill their intended purpose and contribute to sustainability The design of the HANC is a prime case for measuring landscape performance as the site has undergone a pervasive transformation of its 65 acre core as an initial phase of improvements The massive six year effort has reconfigured arrival circulation and parking developed new educational facilities constructed a network of walks and trails and established sustainable ecologies of prairie savannah riparian woods and upland woods across the northern half of its property This book uses landscape performance as an integral method of not only blending science into the design process but using scientific outputs as the rationale for design decision making Through this the book showcases a multitude of proven quantitative and qualitative evaluation methods which can be applied to other designs and plans calculating their specific impacts on the HANC and guiding readers through how to use each tool through an applied process This book provides a comprehensive set of tools and approaches to measuring landscape performance that could be used as a guide for other projects to replicate or expand upon The book helps move the design professions beyond simple stereotypes of simple beauty of form showcasing and describing how the design professions primarily landscape architecture are an extremely scientific and evidence based industry

Sustainable Landscape Planning Paul Selman, 2012-07-26 This book takes as its starting point the need to examine critically the case for landscape reconnection It looks at alleged disconnections and their supposed consequences It explores the arguments about reconnecting the natural and human elements of whole landscapes More broadly it considers landscape as an arena within which science humanities and professions can find common ground and in which vivid social learning can occur about key social and environmental issues It takes a dynamic view of landscape in contrast to the popular image of timeless traditional scenery It accepts that even the most cherished cultural landscapes will change and indeed it views change drivers as a potentially positive means of creating new connectivities between people and place It recognises the growing interest in promoting resilience and ecosystem services across extensive landscapes such as by creating new space for water and wildlife

Development Phillip B. Roös,2020-09-15 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an adaptive pattern language that re-establishes our wholeness with nature and considers the vulnerabilities of a changing landscape The book examines an integral approach to contemporary theories of planning and design that explores the human nature relationship patterns in social and spatial interconnections between people and their natural environments The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia The concluding chapters argues that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these The book is intended for practitioners and academic scholars with interest in sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation Introduction to Landscape Design John L.

Ecological Planning Forster Ndubisi, 2003-04-30 Chosen by Choice Magazine as an Outstanding Academic Title for 2003 Ecological planning is the process of understanding evaluating and providing options for the use of landscape to ensure a better fit with human habitation In this ambitious analysis Forster Ndubisi provides a succinct historical and comparative account of the various approaches to this process He then reveals how each of these approaches offers different and uniquely useful perspectives for understanding the dialogue between human and environmental processes Ndubisi begins by examining the philosophies behind and major contributors to ecological thinking during the past 150 years as well as the paradigm shift in planning that occurred in recent decades as a result of a growing global ecological awareness He then turns to landscape suitability analysis and discusses alternative approaches to ecological planning such as applied human ecology applied landscape ecology and others Finally he offers a comparative synthesis of the approaches in order to reveal the theoretical and methodological assumptions inherent when planners choose one approach over the other Ndubisi concludes that no one approach can by itself adequately address the whole spectrum of ecological planning issues For this reason he offers guidance as to when it may be appropriate for landscape architects and planners to emphasize one approach rather than another

Regenerating Cities Maria Elena Zingoni de Baro, 2022-01-18 This book sets out the discussion on how cities can contribute solutions to some of the challenges the urbanised world is facing such as the pressure of growing populations mitigation of effects of and adaptation to globally changing environmental climate and public health conditions Presenting a detailed explanation of the causes behind the current state of modern cities the book advocates for a paradigm shift to improve the quality of life of ever increasing urban inhabitants whilst nourishing the natural systems that sustain human and non human life in the planet Recognising the precious role that nature plays in the functioning of cities it delves into the study of biophilic design and regenerative development The book argues that these social ecological design approaches can

act as catalysts to develop conditions in urban settings that are beneficial for natural and human systems to thrive and flourish both in ecosystem services and social cultural systems This is particularly relevant for the design of new quality precincts or the regeneration of degraded urban spaces to promote health wellbeing and urban resilience A framework is proposed to guide the process of thinking about designing and building healthier more liveable and resilient urban environments that raise the quality of life in cities The method can be used by researchers practitioners urban designers urban planners architects and landscape architects interested in developing their work within a social ecological perspective It can also be used by local governments and agencies to underpin policy making and by educational institutions to prepare graduates with necessary skills to respond to current and future built environment challenges Man, Technological Advancement and Sustainable Environment ,2011 The British National Bibliography Arthur James Wells,2009
