Jacques Ellul and the Technological Society in the 21st Century Helena M. Jerónimo, José Luís García, Carl Mitcham, 2013-07-08 This volume rethinks the work of Jacques Ellul 1912 1994 on the centenary of his birth by presenting an overview of the current debates based on Ellul's insights As one of the most significant twentieth century thinkers about technology Ellul was among the first thinkers to realize the importance of topics such as globalization terrorism communication technologies and ecology and study them from a technological perspective The book is divided into three sections The first discusses Ellul's diagnosis of modern society and addresses the reception of his work on the technological society the notion of efficiency the process of symbolization de symbolization and ecology The second analyzes communicational and cultural problems as well as threats and trends in early twenty first century societies Many of the issues Ellul saw as crucial such as energy propaganda applied life sciences and communication continue to be so In fact they have grown exponentially on a global scale producing new forms of risk Essays in the final section examine the duality of reason and revelation They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge which is to say on the one hand the experience of the human being as contained in the rationalist sociological and philosophical traditions On the other hand there are the transcendent roots of human existence as well as revealed knowledge in the mystical and religious traditions The meeting of these two traditions enables us to look at Ellul's work as a whole but above all it opens up a space for examining religious life in the technological society

Faith, Hope, and Love in the Technological Society Franz A. Foltz, Frederick A. Foltz, 2018-07-31 Franz and Frederick Foltz examine how modern technology creates an environment that significantly affects Christianity by reducing the mysteries of faith to manageable techniques The body of their work analyzes the effects of technology on the theological virtues of faith hope and love the triad that believers have used for a common narrative to understand and express their thoughts and experiences They begin by looking at how recent developments have brought us into a post truth era by removing words from their context in nature time place and community Popular theologies such as the power of positive thinking the laws of creation the plan for

salvation and the prosperity gospel reflect this change by gearing all for efficiently getting what we want and ignoring tradition. The authors then examine each of the virtues separately, finding that faith has become a risk management tool that depends on confidence in systems rather than personal relationships; hope is defined as the expectation that our present desires shall be granted rather than a vision of the future; and love has become an intimacy that provides escape from the real world and community rather than a self-denying care for them. Finally, the authors take a look at some appropriate responses.

Communicating Risks to the Public R.E. Kasperson, P.J. Stallen, 2012-12-06 Risk communication: the evolution of attempts. Risk communication is at once a very new and a very old field of interest. Risk analysis as Krinsky and Plough (1988) point out, dates back at least to the Babylonians in 3200 BC. Cultures have traditionally utilized a host of mechanisms for anticipating, responding to, and communicating about hazards, as in food avoidance, taboos, stigma of persons and places, myths, migration, etc. Throughout history, trade between places has necessitated labelling of containers to indicate their contents. Seals at sites of the ninth century BC Harappan civilization of South Asia record the owner and/or contents of the containers. Hadden (1986) 3. The Pure Food and Drug Act, the first labelling law with national scope in the United States, was passed in 1906. Common law covering the workplace in a number of countries has traditionally required that employers notify workers about significant dangers that they encounter on the job; an obligation formally extended to chronic hazards in the OSHA's Hazard Communication regulation of 1983 in the United States. In this sense, risk communication is probably the oldest way of risk management. However, it is only until recently that risk communication has attracted the attention of regulators as an explicit alternative to the by now more common and formal approaches of standard setting, insuring, etc. Baram (1982).

Risk Evaluation and Management V.T. Covello, Joshua Menkes, J.L. Mumpower, 2012-12-06 Public attention has focused in recent years on an array of technological risks to health, safety, and the environment. At the same time, responsibilities for technological risk assessment, evaluation, and management have grown in both the public and private sectors because of a perceived need to anticipate, prevent, or reduce the risks inherent in modern society. In attempting to meet these responsibilities, legislative, judicial, regulatory, and private sector institutions have had to deal with the extraordinarily complex problems of assessing and balancing risks, costs, and benefits. The need to help society cope with technological risks has given rise to a new intellectual endeavor: the social and behavioral study of issues in risk evaluation and risk management. The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields. Analyzing social and behavioral issues requires the efforts of political scientists, sociologists, decision analysts, management scientists, economists, psychologists, philosophers, and policy analysts, among others.

The Twenty-first Century Confronts Its Gods David J. Hawkin, 2012-02-01 This book penetrates the assumptions of Western technological society and exposes the powers that govern it. The contributors argue that it is a mistake to think that religion and belief have been relegated to the private sphere and are no longer important in the public and political domains. They assert that the twenty-first century has a

set of new gods the powers of globalization technology the market and military might that reign alongside those of traditional religions These are the forces to which the modern era has granted ultimacy This book looks at how major religions such as Christianity Islam Judaism Hinduism and Buddhism play an important role in politics and society on both the global and local levels The new gods of technology globalization and war are shown to exacerbate the existing cultural divisions and religious strife that mark our time By understanding the importance of that which is held sacred whether traditional belief or modern practice not acknowledged as belief the contributors help us to comprehend our present situation and challenges The Analysis of Actual Versus Perceived Risks V.T. Covello, W. Gary Flamm, Joseph V. Rodricks, Robert G. Tardiff, 2012-12-06 In 1980 a group of scientists from national laboratories universities and other research organizations gathered informally in a series of meetings to consider the state of research on risks to health safety and the environment Each scientist had conducted research on the subject All felt that the traditional disciplines and professional societies to which they belonged were neither adequate nor appropriate for addressing the extraordinarily complex problems of assessing the risks inherent in modern society The consensus of the group was that a new society was needed to address these problems in a scientific and objective way From these initial meetings the Society for Risk Analysis was formed The major aims of the Society for Risk Analysis as stated in its constitution are to promote knowledge and understanding of risk analysis techniques and their applications to promote communication and interaction among those engaged in risk analysis and to disseminate risk analysis information and promote the advancement of all aspects of risk analysis Members of the Society are drawn from a variety of disciplines including the health sciences engineering the physical sciences the humanities and the behavioral and social sciences An important function of the Society is the annual meeting at which various aspects of risk analysis are discussed The first annual meeting represented by this volume was the International Workshop on the Analysis of Actual vs *Power and Technology* Jan van Dijk, 2024-09-11 The definition of power varies across disciplines Social scientists tend to deal with social power philosophers of technology with the relation between technology and society and ecologists with the relation between natural and social power Concepts of power and technology are freely used but this relationship is complex and multifaceted In this analytic and ambitious textbook Jan van Dijk brings these perspectives together to provide a more comprehensive answer In attempting to integrate social technical and natural power into one framework he develops a general concept of power which unites all three the first time such an attempt has been made The author argues that it is important to look at these concepts together natural power is not simply a resource for technology and society and its inclusion is crucial given the ecological impact of technologies Overall nine forms of power which comprise the framework are discussed in each chapter force coercion domination discipline dependency information persuasion and authority and at all levels individuals organizations and societies Van Dijk concludes with some practical implications and asks two key questions how can automatic and autonomous technology such as AI be controlled by humans And how can we

find a more sustainable and less exploitive technology Power and Technology contains many figures tables and illustrations and is suitable for students and scholars of technology studies and the sociology philosophy and history of technology *The Social Contours of Risk: Risk analysis, corporations and the globalization of risk* Jeanne X. Kasperson, Roger E. Kasperson, 2005 The Social Contours of Risk Volume I Publics Risk Communication and the Social Amplification of Risk We live in a risk society where the identification distribution and management of risks from new technology environmental factors or other sources are crucial to our individual and social existence In The Social Contours of Risk Volumes I and II two of the world's leading and most influential analysts of the social dimensions of risk bring together their most important contributions to this fundamental and wide ranging field Volume I collects their fundamental work on how risks are communicated among different publics and stakeholders including local communities corporations and the larger society It analyses the problems of lack of transparency and trust and explores how even minor effects can be amplified and distorted through media and social responses preventing effective management The final section investigates the difficult ethical issues raised by the unequal distribution of risk depending on factors such as wealth location and genetic inheritance with examples from worker and public protection facility siting conflicts transporting hazardous waste and widespread impacts such as climate change **Assessment of Technologies for Determining Cancer Risks from the Environment**, 1981

Lees' Loss Prevention in the Process Industries Frank Lees, 2012-11-05 Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes The field of loss prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world and Lees is a detailed reference to defending against hazards Recognized as the standard work for chemical and process engineering safety professionals it provides the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing three volume reference instead The process safety encyclopedia trusted worldwide for over 30 years Now available in print and online to aid searchability and portability Over 3 600 print pages cover the full scope of process safety and loss prevention compiling theory practice standards legislation case studies and lessons learned in one resource as opposed to multiple sources **Governing Risks in Modern Britain** Tom Crook, Mike

Esbester, 2016-04-26 For more than 200 years everyday life in Britain has been beset by a variety of dangers from the mundane to the life threatening *Governing Risks in Modern Britain* focuses on the steps taken to manage these dangers and to prevent accidents since approximately 1800 It brings together cutting edge research to help us understand the multiple and contested ways in which dangers have been governed It demonstrates that the category of risk broadly defined provides a new means of historicising some key developments in British society Chapters explore road safety and policing

environmental and technological dangers and occupational health and safety The book thus brings together practices and ideas previously treated in isolation situating them in a common context of risk related debates dilemmas and difficulties Doing so it argues advances our understanding of how modern British society has been governed and helps to set our risk obsessed present in some much needed historical perspective

Risk Taking and Decision Making, 1998-02 Risks are an integral part of complex high stakes decisions and decisionmakers are faced with the unavoidable tasks of assessing risks and forming risk preferences This is true for all decision domains including financial environmental and foreign policy domains among others How well decisionmakers deal with risk affects to a considerable extent the quality of their decisions This book provides the most comprehensive analysis available of the elements that influence risk judgments and preferences The book has two dimensions theoretical and comparative historical The study of risk taking behavior has been dominated by the rational choice approach Instead the author adopts a socio cognitive approach involving a multivariate theory integrating contextual cognitive motivational and personality factors that affect an individual decisionmaker s judgment and preferences the social interaction and structural effects of the decisionmaking group and its organizational setting and the role of cultural societal values and norms that sanction or discourage risk taking behavior The book s theoretical approach is applied and tested in five historical case studies of foreign military interventions The richly detailed empirical data on the case studies make them metaphorically speaking an ideal laboratory for applying a process tracing approach in studying judgment and decision processes at varying risk levels The case studies analyzed are U S interventions in Grenada in 1983 and Panama in 1989 both low risk Soviet intervention in Czechoslovakia in 1968 moderate risk U S intervention in Vietnam in 1964-68 high risk and Israel s intervention in Lebanon in 1982-83 high risk

Democracy in a Technological Society L.

Winner, 2013-03-09 This ninth volume is one of the most ambitious in the Philosophy and Technology series Edited by technopolitical philosopher Langdon Winner it assembles an impressive collection of philosophers and political theorists to discuss one of the most important topics of the end of the twentieth century the bearing of technology in all its ramifications on the practice of democratic politics in the developed world When set beside the previous volume in the series Europe America and Technology the two together open a philosophical dialogue of great significance about the ways technology challenges democracy at its very roots Some philosophers think the attack is fatal Others are optimistic that democratic means can be discovered or invented for the control of technology Still others object to an optimism versus pessimism formulation of the issue But all agree that the issue is highly significant one that demands serious philosophical inquiry The Society for Philosophy and Technology was fortunate in being able to draw this group of writers to Bordeaux France in 1989 along with a large number of others whose contributions to the debate could not be included here It is equally fortunate to have chosen Langdon Winner as president when the time came to select the best of the papers to fashion this volume

The End of Ethics in a Technological Society Lawrence E. Schmidt,Scott Marratto,2008-02-06 Lawrence Schmidt and Scott Marratto challenge modern liberal ethics arguing that there is no consistent ethical framework to deal with the long range negative consequences of certain technological developments They examine established ethical approaches to such urgent contemporary concerns as environmental degradation nuclear energy high tech militarism and fetal genetic testing showing that the prevailing viewpoint valorizes autonomy above all other goods and considers technological advances as mere extensions of the range of human freedoms Modern ethics thus fails to take into account the moral intuition that some possibilities in the realm of techno science simply ought not to be pursued A comprehensive assessment of modern western society s commitment to technological progress The End of Ethics in a Technological Society presents a convincing argument in favour of a post liberal approach one that rejects the ideology of progress supports caution and accepts limitation

Improving Disaster Resilience and Mitigation - IT Means and Tools Horia-Nicolai Teodorescu,Alan Kirschenbaum,Svetlana Cojocaru,Claude Bruderlein,2014-09-08 The focus of this volume is comprised of the fundamentals models and information technologies IT methods and tools for disaster prediction and mitigation A more detailed list of topics includes mathematical and computational modeling of processes leading to or producing disasters modeling of disaster effects IT means for disaster mitigation including data mining tools knowledge based and expert systems for use in disaster circumstances GIS based systems for disaster prevention and mitigation and equipment for disaster prone areas A specific type or class of disasters natural or human made however will not be part of the main focus of this work Instead this book was conceived to offer a comprehensive integrative view on disasters seeking to determine what various disasters have in

common Because disaster resilience and mitigation involve humans societies and cultures not only technologies and economic models special attention was paid in this volume to gain a comprehensive view on these issues as a foundation of the IT tool design
