paths required to make secure computers a reality in the USAF A major contribution of this report was the definition of the reference monitor concept which led to security kernel architectures In the mid to late 1970s a number of systems were designed and implemented using a security kernel architecture These systems were mostly sponsored by the defense establishment and were not in wide use Fast forwarding to more recent times the advent of the world wide web inexpensive workstations for the office and home and high speed connections has made it possible for most people to be connected This access has greatly benefited society allowing users to do their banking shopping and research on the Internet Most every business government agency and public institution has a public facing web page that can be accessed by anyone anywhere on the Internet fortunately society's increased dependency on networked software systems has also given easy access to the attackers and the number of attacks is steadily increasing

Guide to Wireless Sensor Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-05-29 Overview and Goals Wireless communication technologies are undergoing rapid advancements The last few years have experienced a steep growth in research in the area of wireless sensor networks WSNs In WSNs communication takes place with the help of spatially distributed autonomous sensor nodes equipped to sense specific information WSNs especially the ones that have gained much popularity in the recent years are typically ad hoc in nature and they inherit many characteristics features of wireless ad hoc networks such as the ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch These features help to set up WSNs fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations WSNs find a variety of applications in both the military and the civilian population worldwide such as in cases of enemy intrusion in the battlefield object tracking habitat monitoring patient monitoring re detection and so on Even though sensor networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to coverage and deployment scalability quality of service size computational power energy efficiency and security

Trusted Recovery and Defensive Information Warfare Peng Liu, Sushil Jajodia, 2013-03-14 Information security concerns the confidentiality integrity and availability of information processed by a computer system With an emphasis on prevention traditional information security research has focused little on the ability to survive successful attacks which can seriously impair the integrity and availability of a system

Trusted Recovery And Defensive Information Warfare uses database trusted recovery as an example to illustrate the principles of trusted recovery in defensive information warfare Traditional database recovery mechanisms do not address trusted recovery except for complete rollbacks which undo the work of benign transactions as well as malicious ones and compensating transactions whose utility depends on application semantics Database trusted recovery faces a set of unique challenges In particular trusted database recovery is complicated mainly by a the presence of benign transactions that depend directly or indirectly on malicious transactions and b the requirement by many mission critical database applications that trusted recovery should be done on the fly without blocking the execution of new user transactions Trusted Recovery And Defensive Information Warfare proposes a new model and a set of innovative algorithms for database trusted recovery Both read write dependency based and semantics based trusted recovery algorithms are proposed Both static and dynamic database trusted recovery algorithms are proposed These algorithms can typically save a lot of work by innocent users and can satisfy a variety of attack recovery requirements of real world database applications Trusted Recovery And Defensive Information Warfare is suitable as a secondary text for a graduate level course in computer science and as a reference for researchers and practitioners in information security
