Sedimentation And Mineral Deposits In The Southwestern Pacific Ocean:

Sedimentation and Mineral Deposits in the Southwestern Pacific Ocean David Spencer Cronan, 1986 **Marine Minerals in Exclusive Economic Zones** D.S. Cronan, 1991-11-30

In the last ten years offshore mineral exploration programmes have increasingly concentrated on the 200 mile Exclusive Economic Zones adjacent to coastal states. This book gives an integrated treatment of the various mineral types occurring in these zones: their genesis, distribution and economic importance. The book opens with a broad overview of the subject and discusses the legislative issues relevant to marine and mineral exploitation. Chapters then deal in turn with aggregates, placers, precious coral, phosphorites, manganese nodules, cobalt-rich manganese crusts and hydrothermal deposits. An international set of case studies illustrates each type of deposit, many studies based on the author's own experience in marine mineral evaluation programmes around the world during the past 25 years.

Manganese Mineralization Keith Nicholson, 1997. Manganese mineralization is diverse in occurrence, origin, mineralogy and geochemistry. This volume includes a review of the range of terrestrial Mn deposits and their relative abundance through geological time. Experimental and modelling approaches to Mn geochemistry and mineralogy can further aid our understanding of the formational and depositional processes involved and thereby our interpretation of deposit metallogenesis. *Applied Geochemistry in the 1980's* Iain Thornton, R. Howarth, 1986-05

Deep-Sea Minerals Developments in the 20th Century David S. Cronan, 2024-05-06. The book is an historical monograph on deep sea mineral related activities and attitudes towards deep sea mining in the 20th Century which makes comparisons with the current situation in regard to those activities and attitudes. It reviews developments in the study of and prospects and plans for mining deep sea manganese nodules, cobalt-rich crusts, hydrothermal deposits and phosphorites and discusses associated environmental, technological and economic issues. It is based on several sources: First, the author's experience gleaned from around 50 years of attending conferences on the subject, the most important of which was the annual Underwater Mining Institutes held from 1970 onwards at which much of the material in the book was first exposed; second, discussions with and advice from the author's colleagues on the subject, all attributed; and third, the published literature. The target audiences are marine mining companies and their associates, marine environmentalists, UN and Government administrators responsible for seabed activities, undergraduate students of marine affairs and history, and interested lay persons. Unique features include the widespread sources used, including unpublished conference proceedings and reports, personal insights gleaned from more than 50 years of working in the field, the author's publications dating from 1967-2022 and attributed personal communications from the author's colleagues. *Oceanography And Marine Biology* Harold Barnes, 1986-12-31

A good quality annual review series that provides an important service to the sciences for both the general and the specialist reader. *Oceanography and Marine Biology* has succeeded in producing one admirably for more than 35 years. The quality of the paper, the printing and the presentation is excellent. *Times Higher Education Supplement* **Circum-Pacific Energy and**
