**Lives of Weeds** John Cardina, 2021-09-15 *Lives of Weeds* explores the tangled history of weeds and their relationship to humans Through eight interwoven stories John Cardina offers a fresh perspective on how these tenacious plants came about why they are both inevitable and essential and how their ecological success is ensured by determined efforts to eradicate them Linking botany history ecology and evolutionary biology to the social dimensions of humanity's ancient struggle with feral flora Cardina shows how weeds have shaped and are shaped by the way we live in the natural world Weeds and attempts to control them drove nomads toward settled communities encouraged social stratification caused environmental disruptions and have motivated the development of GMO crops They have snared us in social inequality and economic instability infested social norms of suburbia caused rage in the American heartland and played a part in perpetuating pesticide use worldwide *Lives of Weeds* reveals how the technologies directed against weeds underlie ethical questions about agriculture and the environment and leaves readers with a deeper understanding of how the weeds around us are entangled in our daily choices

*Advances in Seed Priming* Amitava Rakshit, Harikesh Bahadur Singh, 2018-06-07 Most crop plants grow in environments that are suboptimal which prevents the plants from attaining their full genetic potential for growth and reproduction Stress due to abiotic and biotic agents has a significant effect on world food production Annually an estimated 15% of global yields are lost but this figure belies far greater losses for specific food systems and the people whose existence is dependent upon them particularly in developing countries Current efforts to mitigate these losses are worryingly over reliant on the use of sophisticated and costly chemicals measures with substantial economic and environmental costs or on the development of efficient and smart crop varieties which can take decades What we need is a broad range of safe robust and equitable solutions for food producers One under investigated approach is that of utilizing the crop plant's innate immune system to resist stress More specifically the innate immune system can be sensitized or primed to respond more quickly and strongly to protect the plant against stresses However a strategy of employing priming in combination with

reduced pesticide use can enhance protection and help to meet commitments to reducing chemical inputs in agriculture This book discusses in detail different segments of priming in addressing stress factors and traits to increase competitiveness against all odds Adopting a holistic and systematic approach it addresses priming to counter climate change related adverse effects coupled with pest and pathogen related stress on the productivity of crops utilizing natural resources to reap sustainable environmental economic and social benefits for potential productivity of crops maintaining synergy between soil water and plants in ways that mimic nature Plant Desiccation Tolerance Matthew A. Jenks, Andrew J. Wood, 2008-06-02 Plant desiccation tolerance is of great basic and applied scientific interest Understanding plant responses and adaptations to severe desiccation is key to applying desiccation tolerance research to the improvement of economically important crops Plant Desiccation Tolerance brings together a field of international researchers to provide a current review of the advances in plant desiccation tolerance research The book is broken up into three sections Vegetative Desiccation Tolerance Desiccation Tolerance of Pollen Spores and Seeds and Applications of Desiccation Tolerance Research Completely up to date and written by leading desiccation experts Plant Desiccation Tolerance will be of great interest to plant researchers and plant and crop science professionals Handbook of Plant and Crop Physiology, Third Edition Mohammad Pessarakli, 2014-03-21 Continuous discoveries in plant and crop physiology have resulted in an abundance of new information since the publication of the second edition of the Handbook of Plant and Crop Physiology necessitating a new edition to cover the latest advances in the field Like its predecessors the Third Edition offers a unique complete collection of topics in plant and crop physiology serving as an up to date resource in the field This edition contains more than 90 percent new material and the remaining 10 percent has been updated and substantially revised Divided into nine parts to make the information more accessible this handbook covers the physiology of plant and crop growth and development cellular and molecular aspects and production processes It addresses the physiological responses of plants and crops to environmental stresses heavy metals and agrichemicals presents findings on small RNAs in response to temperature stress and discusses the use of bioinformatics in plant crop physiology The book deals with the impacts of rising CO<sub>2</sub> levels and climate change on plant crop growth development and production It also offers guidance on plants and crops that can be successfully cultivated under more stressful conditions presented in six chapters that examine alleviation of future food security issues With contributions from 105 scientists from 17 countries this book provides a comprehensive resource for research and for university courses covering plant physiological processes ranging from the cellular level to whole plants The content provided can be used to plan implement and evaluate strategies for dealing with plant and crop physiology problems This edition includes numerous tables figures and illustrations to facilitate comprehension of the material as well as thousands of index words to further increase accessibility to the desired information *Advances in Seed Biology* Paolo A. Sabelli, Brian A. Larkins, 2015-11-11 The seed plays a fundamental role in plant reproduction as well as a key source of energy nutrients

and raw materials for developing and sustaining humanity With an expanding and generally more affluent world population projected to reach nine billion by mid century coupled to diminishing availability of inputs agriculture is facing increasing challenges to ensure sufficient grain production A deeper understanding of seed development evolution and physiology will undoubtedly provide a fundamental basis to improve plant breeding practices and ultimately crop yields Recent advances in genetic biochemical molecular and physiological research mostly brought about by the deployment of novel high throughput and high sensitivity technologies have begun to uncover and connect the molecular networks that control and integrate different aspects of seed development and help determine the economic value of grain crops with unprecedented details The objective of this e book is to provide a compilation of original research articles reviews hypotheses and perspectives that have recently been published in *Frontiers in Plant Science Plant Evolution and Development* as part of the Research Topic entitled *Advances in Seed Biology* Editing this Research Topic has been an extremely interesting educational and rewarding experience and we sincerely thank all authors who contributed their expertise and in depth knowledge of the different topics discussed We hope that the information presented here will help to establish the state of the art of this field and will convey how exciting and important studying seeds is and hopefully will stimulate a new crop of scientists devoted to investigating the biology of seeds

*Seed Dormancy, Germination and Pre-Harvest Sprouting* Chengdao Li, Hiro Nonogaki, Jose Barrero, 2019-03-28 Pre harvest sprouting PHS and late maturity alpha amylase LMA are two of the biggest grain quality defects that grain growers encounter About 50 percent of the global wheat crop is affected by pre harvest sprouting to various degrees Pre harvest sprouting is a genetically based quality defect and results in the presence of alpha amylase in otherwise sound mature grain It can range from perhaps undetectable to severe damage on grain and is measured by the falling numbers or alpha amylase activity This is an international issue with sprouting damage lowering the value of crops to growers seed and grain

merchants millers maltsters bakers other processors and ultimately the consumer As such it has attracted attention from researchers in many biological and non biological disciplines The 13th International Symposium on Pre Harvest Sprouting in Cereals was held 18-20 September 2016 in Perth to discuss current findings of grain physiology genetic pathways trait expression and screening methods related to pre harvest sprouting and LMA This event followed the previous symposium in 2012 in Canada
