**Seeds and Fruits of Plants of Eastern Canada and Northeastern United States**, 1978 Seeds and Fruits of Plants of Eastern Canada and Northeastern United States Frederick Howard Montgomery, *Seeds and Fruits of Plants of Eastern Canada and Northeastern United States* F. H. Montgomery, 1977 Hitherto there has been no way to identify Canadian and US seed samples except to compare them with known specimens Identification has been a process of elimination depending on the experience knowledge and memory of the observer The Seeds and Fruits of Plants of Eastern Canada and Northeastern United States describes and illustrates the seeds of about 1100 species of native wild and introduced weedy plants from some 118 families and provides keys for their identification based on their geometric shapes The primary tool used in describing the shape of the seeds and keying them is the chart of symmetric plane figures developed by the Systematics Association Committee of the International Association Plant Taxonomy That seeds which were obtained from herbaria or the author's own collection were thus sorted and classified according to the exact shape of their longitudinal and cross sections to form the major sections of the key Morphological details observed under magnifications up to 30 x were then used both for minor separations in the key and in describing species Photography was chosen as the most accurate means of illustration While primarily intended for taxonomists and those teaching seed identification as a text and for verification of identifications this book will also be an important reference for studies of archaeology studying seed remains ecologists studying bog formations and see analysts both in Canada and the US *Guide to Sources for Agricultural and Biological Research* J.
