Seeds J. Bewley, 2012-12-06 Since the publication of our monograph on seed physiology and biochemistry *The Physiology and Biochemistry of Seeds in Relation to Germination* Springer Verlag 1978 1982 it has been suggested to us that a text covering the same subject area would be appropriate This book is our response Unlike the previous volumes however this text is not intended to be either a critical or a comprehensive account Instead it is a more generalized consideration of the essential aspects of seed physiology and biochemistry as we see them It also includes a substantial amount of new and different material In a work of this sort it is inevitable that some simplifications must be made but we hope nevertheless that we have presented the most reasonable conspectus of areas of controversy and uncertainty In this respect literature citations have been kept to a minimum and do not interrupt the text they are placed at the end of each chapter and are intended to be used as a source for further references We hope that this book will be of value to students and teachers in universities colleges and other institutes of higher learning whose courses include plant biology Although it is particularly appropriate for studies of seed biology it should also find broader applications in general plant physiology agriculture and horticulture

Larkins, Indra K. Vasil, 1997-09-30 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plant seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds *Seeds, 3rd Edition* Robert S Gallagher, 2013-12-06 The 3rd edition of *Seeds The Ecology of Regeneration in Plant Communities* highlights the many advances in the field of seed ecology and its relationship to plant community dynamics that have taken place in recent years The new edition also features chapters on seed development and morphology seed chemical ecology implications of climate change on regeneration by seed and the functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology **Seeds: Anti-proliferative Storehouse for Bioactive Secondary Metabolites** Dilipkumar Pal, 2024-08-31 This book presents extensive and up to date information on the anti proliferative properties of various plant seeds for their application in pharmaceutical industry and medicinal research This information is imperative for understanding and developing high quality products from the seeds The book provides insights about anticancer and antitumour activities present in seeds Different chapters cover the traditional knowledge as well as recent innovations in various seeds such as prune pumpkin grape fruit sesame sunflower bitter gourd papaya mango apple black plum cumin water melon musk melon cotton carambola pear cardamom moringa wallich Chinese cabbage pistachio etc and their bioactivities for the applications in cancer and malignancy proliferation The book introduces the readers to seed as a bioactive compound and delineates the various health effects It further explains the relation between the different metabolites and their effect on cell proliferation
