

Mathematics of Imaging: Seeing by Solving

We often depend on images to make sense of our surroundings, be it through explorations of complex molecules that underpin scientific advances, examinations of structures inside the human body to help treat illnesses, or glimpses into the outer reaches of our universe. However, most images begin as a collection of data and must be converted to something that can be interpreted by the human eye. Mathematical and statistical techniques make this possible.

Telegraph, newspaper's reports, captured the first images of a likely hole approximately 60 million light years away from Earth.

They investigated theories motivated by mathematical facts, including the hyperbolic growth, string algorithms, and commensurability.

Each of these reports always identifies the equipment used to measure—typically from the small number of measurements.
