**Mobilizing Adults for Positive Youth Development** E. Gil Clary, Jean E. Rhodes, 2006-09-24 Perhaps no other challenge is more pressing in creating developmentally tentative community and society: the theme of this book series than mobilizing adults to play active constructive roles in the lives of children and adolescents In a society that too easily defaults to designing programs as cure-alls for meeting young people's needs, particular attention must be paid to understanding and mobilizing the kind of positive relational energy that prepares each successive generation to assume its place in society Although programs and institutions certainly play important roles, the key lies in the personal commitment, involvement, and investment of adults in young people's lives In *Mobilizing Adults for Positive Youth Development: Strategies for Closing the Gap between Beliefs and Behaviors*, E. Gil Clary and Jean E. Rhodes have assembled the insights of leading scholars from multiple disciplines and contexts for engaging a broad cadre of adults as allies for youth development As the editors write, the question guiding the book is: How can we most effectively encourage adults

both individually and collectively to begin to behave differently with respect to the young people of a community to do so consistently and to do so in a variety of ways What is being proposed then is nothing less than a social movement that engages individuals small groups neighborhoods workplaces schools faith communities and broader social institutions in attending to the well being and healthy development of young people **Chronic Disease Notes & Reports** ,1997

**Encyclopedia of Science and Technology Communication** Susanna Hornig Priest,2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science

Consumer psychology is a discipline at the interface of marketing, advertising, and psychology. The research in this area focuses on fundamental psychological processes as well as on issues associated with the use of theoretical principles in applied contexts.
