Marx And Nature A Red And Green Perspective:

Marx and Nature P. Burkett, 1999-02-14 With Marx and Nature Paul Burkett reconstructs Marx s approach to nature society and environmental crisis While recognizing that production is structured by historically developed relations among producers Marx also insists that production as a social and material process is shaped and constrained by natural conditions including the natural condition of human bodily existence Marx s value analysis places him squarely in the camp of the growing number of ecological theorists questioning the ability of monetary and market based calculations to adequately represent the natural conditions of human production and development Marx and Nature NA NA,1999-02-15 There may still be disagreement about the threat to human survival posed by society s environmental impacts but no one can doubt that individual eco systems and the global biosphere are both increasingly shaped by human production and consumption This book shows that Marx s treatment of natural conditions possesses an inner logic coherence and analytical power which has not been previously recognized The power of Marx s approach stems from his consistent treatment of human production in terms of the mutual constitution of its social form and material content While recognizing that production is structured by historically developed relations among producers Marx also insists that production as a social and material process is shaped and constrained by natural conditions including the natural condition of human bodily existence Paul Burkett shows that it is Marx s overriding concern with human emancipation that impels him to approach nature from the standpoint of materialist history sociology and critical political economy Marxism and Ecological Economics Paul Burkett, 2006-03-01 This book undertakes the first general assessment of ecological economics from a Marxist point of view and shows how Marxist political economy can make a substantial contribution to ecological economics. The analysis is developed in terms of four basic issues 1 nature and economic value 2 the treatment of nature as capital 3 the significance of the entropy law for economic systems 4 the concept of sustainable development In each case it is shown that Marxism can help ecological economics fulfill its commitments to multi disciplinarity methodological pluralism and historical openness In this way a foundation is constructed for a substantive dialogue between Marxists and ecological economists Radicalism, Revolution, and Reform in Modern China Catherine Lynch, Robert B. Marks, Paul G. Pickowicz, 2011-03-31 This volume illuminates the relationship of China s radical past to its reformist present as China makes a way forward through very differently conceived and contested visions of the future In the context of early twenty first century problems and the failures of global capitalism is China's history of revolutionary socialism an aberration that is soon to be forgotten or can it serve as a resource for creating a more fully human and radically democratic China with implications for all of us Ranging from the early years of China's revolutionary twentieth century to the present the essays collected here look at the past and present of China with a view toward better understanding the ideas ideals and people who have dared to imagine radical transformation of their worlds and to assess the conceptual political and social limitations of these visions and their implementations. The volume s chapters focus on

these issues from a range of vantage points representing a spectrum of current scholarship. The first half of the book brings new insights to understanding how early twentieth century intellectuals interpreted ideas that allowed them to break with China's past and to envision new paths to a modern future It treats of Chen Duxiu a founder of the Communist party Mao Zedong and Mao in relation to the non Communist Liang Shuming and with the Dalai Lama With continuing threads of nation and nationalities of peasants utopias and dystopias linking the chapters the book s second half looks broadly at the consequences of the implementations of radical ideas at the same time critiquing our accepted frameworks of analysis Moving up to the present the book investigates the effects of the reforms since the 1980s on long term environmental degradation and on the emergence of a capitalist rural economy It gives an unsparing view into contemporary rural China through independent films The book concludes with an analysis of the unshakable persistence of the shibboleth the rise of China in popul Mute Compulsion Søren Mau, 2023-01-31 Despite insoluble contradictions intense volatility and fierce resistance the crisis ridden capitalism of the 21st century lingers on To understand capital s paradoxical expansion and entrenchment amidst crisis and unrest Mute Compulsionoffers a novel theory of the historically unique forms of abstract and impersonal power set in motion by the subjection of social life to the profit imperative Building on a critical reconstruction of Karl Marx s unfinished critique of political economy and a wide range of contemporary Marxist theory philosopher Sren Mau sets out to explain how the logic of capital tightens its stranglehold on the life of society by constantly remoulding the material conditions of social reproduction In the course of doing so Mau intervenes in classical and contemporary debates about the value form crisis theory biopolitics social reproduction humanism logistics agriculture metabolism the body competition technology and relative surplus populations Marxism and Phenomenology Bryan Smyth, Richard Westerman, 2021-10-25 Marxism and Phenomenology The Dialectical Horizons of Critique edited by Bryan Smyth and Richard Westerman offers new perspectives on the possibility of a philosophical outlook that combines Marxism and phenomenology in the critique of capitalism Although Marxism's focus on impersonal social structures and phenomenology's concern with lived experience can make these traditions appear conceptually incompatible the potential critical force of a theoretical reconciliation inspired several attempts in the twentieth century to articulate a phenomenological Marxism Updating and extending this approach the contributors to this volume identify and develop new and previously overlooked connections between the traditions offering new perspectives on Marx Husserl and Heidegger exploring themes such as alienation reification and ecology and examining the intersection of Marxism and phenomenology in figures such as Michel Henry Walter Benjamin and Frantz Fanon These glimpses of a productive reconciliation of the respective strengths of phenomenology and Marxism offer promising possibilities for illuminating and resolving the increasingly intense social crises of capitalism in the twenty first century **Anthropocene Communism** Paul Guillibert, 2025-10-21 In Anthropocene Communism the philosopher and activist Paul Guillibert proposes a brand new communism for life biocommunism With the

aid of this system he hopes to move us beyond the ecological crisis of late capitalism In a highly original reading of Karl Marx s exchanges with the populist terrorists in Russia and informed by the cultural studies of Raymond Williams the Marxism of Jos Carlos Maritequi and Ernst Bloch s attachment to the land the author develops a philosophical naturalism that rethinks our relations with the environment Rather than a fixed state this relationship is influenced by cultural social and historical practices For Guillibert if we are to move beyond the Anthropocene we must develop new strategies Communism must become environmentalism and political ecology can only become truly revolutionary once it is communist the Anthropocene John Bellamy Foster, 2022-08-23 Over the last 11 700 years during which human civilization developed the earth has existed within what geologists refer to as the Holocene Epoch Now science is telling us that the Holocene Epoch in the geological time scale ended replaced by the onset of a new more dangerous Anthropocene Epoch which began around 1950 The Anthropocene Epoch is characterized by an anthropogenic rift in the biological cycles of the Earth System marking a changed reality in which human activities are now the main geological force impacting the earth as a whole generating at the same time an existential crisis for the world's population What caused this massive shift in the history of the earth In this comprehensive study John Bellamy Foster tells us that a globalized system of capital accumulation has induced humanity to foul its own nest The result is a planetary emergency that threatens all present and future generations throwing into question the continuation of civilization and ultimately the very survival of humanity itself Only by addressing the social aspects of the current planetary emergency exploring the theoretical historical and practical dimensions of the capitalism's alteration of the planetary environment is it possible to develop the ecological and social resources for a new journey of hope with Soils Juan Francisco Salazar, Céline Granjou, Matthew Kearnes, Anna Krzywoszynska, Manuel Tironi, 2020-06-25 This book presents a novel and systematic social theory of soil and is representative of the rising interest in the material in social sciences Bringing together new modes of critical description with speculative practices and methods of inquiry it contributes to the exploration of current transformations in socioecologies as well as in political and artistic practices in order to address global ecological change The chapters in this edited volume challenge scholars to attend more carefully to the ways in which they think about soil both materially and theoretically Contributors address a range of topics including new ways of thinking about the politics of caring for soils the ecological and symbiotic relations between soils how the productive capacities and contested governance of soils are deployed as matters of political concern and indigenous ways of knowing and being with soil **Encyclopaedia of Marxism and Education**, 2022-02-14 This encyclopaedia showcases the explanatory power of Marxist educational theory and practice The entries have been written by 51 leading authors from across the globe The 39 entries cover an impressive range of contemporary issues and historical problematics. The editor has designed the book to appeal to readers within the Marxism and education intellectual tradition and also those who are curious newcomers as well as critics of Marxism The Encyclopaedia of Marxism and Education is the first of its kind It is a landmark text with relevance

for years to come for the productive dialogue between Marxism and education for transformational thinking and practice Karl Marx's Grundrisse Marcello Musto, 2008-07-25 Written between 1857 and 1858 the Grundrisse is the first draft of Marx s critique of political economy and thus also the initial preparatory work on Capital Despite its editorial vicissitudes and late publication Grundrisse contains numerous reflections on matters that Marx did not develop elsewhere in his oeuvre and International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014-08-21 This is therefore extremely im second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy **Workers and Trade Unions for Climate Solidarity** Paul Hampton, 2015-06-05 This book is a theoretically rich and empirically grounded account of UK trade union engagement with climate change over the last three decades It offers a rigorous critique of the mainstream neoliberal and ecological modernisation approaches extending the concepts of Marxist social and employment relations theory to the climate realm The book applies insights from employment relations to the political economy of climate change developing a model for understanding trade union behaviour over climate matters. The strong interdisciplinary approach draws together lessons from both physical and social science providing an original empirical investigation into the climate politics of the UK trade union movement from high level officials down to workplace climate representatives from issues of climate jobs to workers climate action This book will be of great interest to students and researchers in environmental politics climate change and environmental sociology Marx's Ecology John Bellamy Foster, 2000-03-01 Progress requires the conquest of

nature Or does it This startling new account overturns conventional interpretations of Marx and in the process outlines a more rational approach to the current environmental crisis Marx it is often assumed cared only about industrial growth and the development of economic forces John Bellamy Foster examines Marx s neglected writings on capitalist agriculture and soil ecology philosophical naturalism and evolutionary theory He shows that Marx known as a powerful critic of capitalist society was also deeply concerned with the changing human relationship to nature Marx s Ecology covers many other thinkers including Epicurus Charles Darwin Thomas Malthus Ludwig Feuerbach P J Proudhon and William Paley By reconstructing a materialist conception of nature and society Marx s Ecology challenges the spiritualism prevalent in the modern Green movement pointing toward a method that offers more lasting and sustainable solutions to the ecological crisis

The Routledge Handbook on Ecosocialism Leigh Brownhill, Salvatore Engel-Di Mauro, Terran Giacomini, Ana Isla, Michael Löwy, Terisa E. Turner, 2021-12-27 Building on the classical works that have propelled and shaped ecosocialist thinking and action and more recent political developments on the ground the volume will provide a reference point for international work in the field both directly political and academic The Handbook acquaints readers with the varied roots of and sometimes conflicting approaches to ecosocialism It does not attempt any unification of ecosocialist currents Rather it aims to provide a resource that is as comprehensive as possible with respect not only to theorization and ideological framing but also and especially to existing projects practices and movements and giving a sense of the geographical reach that ecosocialism so far represents This includes scholarship that extends Marxist foundations and reflects on more recent political developments The theoretical and practice oriented moorings are buttressed by discussions on movements frameworks and prefigurative processes as well as on social struggles occurring within institutional settings Together the collection offers a reference point for international work in the field in social movements and in institutional transformations Providing detailed but accessible overviews of the complex varied dimensions of ecosocialism the Handbook is an essential up to date guide and reference not only for researchers but also for undergraduate and graduate students in geography environmental studies development studies sociology and political science as well as for policymakers and activists A Critical Theory of Global Justice Malte Frøslee Ibsen, 2022-12-20 This book offers the first systematic treatment of the idea of a critical theory of world society Malte Fr slee Ibsen develops a reconstruction of the Frankfurt School tradition as four paradigms of critical theory in original interpretations of the work of notable theorists The SAGE Handbook of Frankfurt School Critical Theory Beverley Best, Werner Bonefeld, Chris O'Kane, 2018-06-04 The SAGE Handbook of Frankfurt School Critical Theory expounds the development of critical theory from its founding thinkers to its contemporary formulations in an interdisciplinary setting It maps the terrain of a critical social theory expounding its distinctive character vis a vis alternative theoretical perspectives exploring its theoretical foundations and developments conceptualising its subject matters both past and present and signalling its possible future in a time of great uncertainty Taking a distinctively theoretical interdisciplinary international

and contemporary perspective on the topic this wide ranging collection of chapters is arranged thematically over three volumes Volume I Key Texts and Contributions to a Critical Theory of Society Volume II Themes Volume III Contexts This Handbook is essential reading for scholars and students in the field showcasing the scholarly rigor intellectual acuteness and negative force of critical social theory past and present In the Nature of Cities Nik Heynen, Maria Kaika, Erik Swyngedouw, 2006-03-23 The social and material production of urban nature has recently emerged as an important area in urban studies human environmental interactions and social studies. This has been prompted by the recognition that the material conditions that comprise urban environments are not independent from social political and economic processes or from the cultural construction of what constitutes the urban or the natural Through both theoretical and empirical analysis this groundbreaking collection offers an integrated and relational approach to untangling the interconnected processes involved in forming urban landscapes The essays in this book attest that the re entry of the ecological agenda into urban theory is vital both in terms of understanding contemporary urbanization processes and of engaging in a meaningful environmental politics They debate the central themes of whose nature is or becomes urbanized and the uneven power relations through which this socio metabolic transformation takes place Including urban case studies international research and contributions from prominent urban scholars this volume will enable students scholars and researchers of geographical environmental and urban studies to better understand how interrelated everyday economic political and cultural processes form and transform urban environments The Ecological Crisis and the Logic of Capital Xueming Chen, 2017-09-11 The worsening environmental crisis has become a serious threat to mankind The search for a solution to this crisis must begin by understanding its causes Taking an eco socialist perspective The Ecological Crisis and the Logic of Capital explores the logic of capitalism as a fundamental cause of today s environmental crisis in particular the thirst for profit and the capitalist mode of production By demonstrating the inherent antagonism between capital and ecology this book argues that proposals to resolve the crisis within the capitalist system are utopian that proposed remedies relying on scientific progress alternative energies low carbon technologies or the introduction of ecological ethics and new attitudes toward Nature into market mechanisms are doomed to failure without a radical overhaul of the principles that govern capitalism Totalitarian **Capitalism and Beyond** George Liodakis, 2016-02-24 Anchored in contemporary debates on capitalism and political economy this study reconsiders the major trends which are currently shaping a new stage of capitalism With chapters examining globalization the role of technology and environmental degradation George Liodakis constructs a politico economic approach on contemporary capitalism from within a classical Marxist framework of political economy The volume provides a fitting balance between theory and empirical evidence and significantly enriches the existing scholarship on contemporary capitalism and the potential for social change This is an important contribution to those interested in international political economy in particular with developing a new political strategy for going beyond capitalism a
