**Marx, Engels and the Philosophy of Science** David Bedford, Thomas Workman, 2022-12-31 This book expounds the dialectical conception of science largely implicit in the writings of Marx and Engels offering a sympathetic reconstruction of a philosophy of science commensurate with Marx's thought Drawing on a reading of dialectics found in Plato and Hegel it recasts Marx's implicit ontology in terms of dialectical conceptions of the world as these conceptions have responded to the growing sophistication of modern science It thus deepens our understanding of materialist philosophy as it relates to science and draws out Marx's logic of science in light of continuing discussions As such it will appeal to philosophers with interests in the nature and development of science and Marxist thought      The Bloomsbury Companion to Marx Andrew Pendakis, Imre Szeman, Jeff Diamanti, 2018-12-27 There are very few figures in history that have exerted as much and as varied an influence as Karl Marx His work represents an unrivalled intervention into fields as various as philosophy journalism economics history politics and cultural criticism His name is invoked across the political spectrum in connection to revolution and insurrection social justice and economic transformation The Bloomsbury Companion to Marx is the definitive reference guide to Marx's life and work Written by an international team of leading Marx scholars the book offers comprehensive coverage of Marx's life and contexts sources influences and encounters key writings major themes and topics and reception and influence The defining feature of this Companion is its attention to the new directions in Marxism that animate the theoretical scientific and political sides of Marx's thought Gender and the growing importance of Marxist feminism is treated as equally important to

Marxism and Education Lotar Rasinski, Dave Hill, Kostas

Skordoulis, 2017-12-15

Marxism and Education offers contemporary Marxist analyses of recent and current education policy and develops Marxist based practices of resistance from a series of national and international perspectives. Part I identifies and critiques pressure points, impacts of and developments in capitalism and education as these pertain to education policy, teacher education and assessment. In Part II, chapter authors develop Marxist praxis, critical education practices and resistance against the intensification of neoliberalism and authoritarian conservatism. With contributions from leading globally recognized Marxist theoreticians, this book addresses the impacts and developments of neoliberal and authoritarian conservative education policies across the UK, USA, Greece, Turkey, Poland and Hungary.

**American Studies** Stephen Ferguson, 2015-09-16

In this ground breaking book, Stephen C. Ferguson addresses a seminal question that is too often ignored: What should be the philosophical basis for African American studies? The volume explores philosophical issues and problems in their relationship to Black studies. Ferguson shows that philosophy is not a sterile intellectual pursuit but a critical tool to gathering knowledge about the Black experience. Cultural idealism in various forms has become enormously influential as a framework for Black studies. Ferguson takes on the task of demonstrating how a Marxist philosophical perspective offers a productive and fruitful way of overcoming the limitations of idealism. Focusing on the hugely popular Afrocentric school of thought, this book's engaging discussion shows that the foundational arguments of cultural idealism are based on a series of analytical and historical misapprehensions. In turn, Ferguson argues for the centrality of the Black working class, both men and women, to Black Studies.

**The Body Productive** Steffan Blayney, Joey

Hornsby, Savannah Whaley, 2022-12-29

The Body Productive represents a new and radical approach to the relationships between capitalism, work and the body. Self-evident, natural, biological: this is how we think of the body on an everyday basis. However, this supposedly most direct aspect of our being may in fact be a primary site of socio-economic mediation and ideological reproduction. How are bodies produced under capitalism? How in turn does capitalism make bodies productive? How is the body and knowledge of the body shaped by demands of production, consumption and exchange, and how can these logics be resisted, challenged and overcome? These are the questions at the heart of The Body Productive, a collection of original, radical new approaches to the relationships between capitalism, work and the body from an international group of

scholars and activists Taking inspiration from the neglected theoretical work of Fran ois Gu ry and Didier Deleule and bridging Marxist and Foucauldian traditions this book rethinks the relationships between the biological and the social the body and the mind power and knowledge discipline and control *Politics in the impasse* Bill Martin, 1996-01-10 Develops a radical politics of community that engages with practical issues such as the Gulf War and the 1992 uprisings in Los Angeles set against the context of postmodern capitalism

**The Deeper Genome** John Parrington, 2017-10-06 Over a decade ago as the Human Genome Project completed its mapping of the entire human genome hopes ran high that we would rapidly be able to use our knowledge of human genes to tackle many inherited diseases and understand what makes us unique among animals But things didn t turn out that way For a start we turned out to have far fewer genes than originally thought just over 20 000 the same sort of number as a fruit fly or worm What s more the proportion of DNA consisting of genes coding for proteins was a mere 2% So was the rest of the genome accumulated junk Things have changed since those early heady days of the Human Genome Project But the emerging picture is if anything far more exciting In this book John Parrington explains the key features that are coming to light some such as the results of the international ENCODE programme still much debated and controversial in their scope He gives an outline of the deeper genome involving layers of regulatory elements controlling and coordinating the switching on and off of genes the impact of its 3D geometry the discovery of a variety of new RNAs playing critical roles the epigenetic changes influenced by the environment and life experiences that can make identical twins different and be passed on to the next generation and the clues coming out of comparisons with the genomes of Neanderthals as well as that of chimps about the development of our species We are learning more about ourselves and about the genetic aspects of many diseases But in its complexity flexibility and ability to respond to environmental cues the human genome is proving to be far more subtle than we ever imagined

**Prolegomena to Any Future Materialism** Adrian Johnston, 2019-09-15 Adrian Johnston s trilogy *Prolegomena to Any Future Materialism* aims to forge a thoroughly materialist yet antireductive theory of subjectivity In this second volume *A Weak Nature Alone* Johnston focuses on the philosophy of nature required for such a theory This volume is guided by a fundamental question How must nature be rethought so that human minds and freedom do not appear to be either impossible or inexplicable within it Asked differently How must the natural world itself be structured such that sapient subjects in all their distinctive peculiarities emerged from and continue to exist within this world In *A Weak Nature Alone* Johnston develops his transcendental materialist account of nature through engaging with and weaving together five main sources of inspiration Hegelian philosophy Marxist materialism Freudian Lacanian metapsychology Anglo American analytic neo Hegelianism and evolutionary theory and neurobiology Johnston argues that these seemingly but not really strange bedfellows should be brought together so as to construct a contemporary ontology of nature Through this ontology nonnatural human subjects can be seen to arise in an immanent bottom up fashion from nature itself

*Navigating the Zeitgeist* Helena Sheehan, 2019-03-25 The first biography

of Helena Sheehan Irish American Marxist feminist activist Why would an American girl child born into a good Irish Catholic family in the thick of the McCarthy era a girl who when she came of age entered a convent morph into an atheist feminist and Marxist The answer is in Helena Sheehan s fascinating account of her journey from her 1940s and 1950s beginnings into the turbulent 1960s when the Vietnam War black power and women s liberation rocked her bedrock assumptions and prompted a volley of life upending questions questions shared by millions of young people of her generation But for Helena Sheehan the increasingly radicalized answers deepened through the following decades Beginning by overturning such certainties as America is the world s greatest country and the Church is infallible Sheehan went on to embrace existentialism philosophical pragmatism the new left and eventually Marxism Migrating from the United States to Ireland she became involved with Irish republicanism and international communism in the 1970s and 1980s Sheehan s narrative vividly captures the global sweep and contradictions of second wave feminism antiwar activism national liberation movements and international communism in Eastern and Western Europe as well as the quieter intellectual ferment of individuals living through these times Navigating the Zeitgeist is an eloquently articulated voyage from faith to enlightenment to historical materialism that informs as well as entertains This is the story of a well lived political and philosophical life told by a woman who continues to interrogate her times

**Paulin Hountondji and the Science Question in Africa** Zeyad el Nabolsy, 2025-07-18 This book offers a systematic reconstruction of Paulin Hountondji s contributions to the debate about the place of modern science on the African continent The book shows that Hountondji develops an account of modern science that is sociologically sensitive to the entanglement between modern science and colonialism on the African continent without falling into epistemic relativism about the claims of modern science It is argued that Hountondji s views on modern science express a strong historical materialist influence and that he develops a theory of science that draws both on the Hessen Grossmann hypothesis and dependency theory Thus this book brings together two strands of historical materialist thought about science that have hitherto been isolated from one another This book is of interest to scholars who specialize in African philosophy history and philosophy of science global philosophy and African studies

**Ernst Bloch's Speculative Materialism** Cat Moir, 2019-12-09 In Ernst Bloch s Speculative Materialism Ontology Epistemology Politics Cat Moir offers a new interpretation of the philosophy of Ernst Bloch The reception of Bloch s work has seen him variously painted as a naive realist a romantic nature philosopher a totalitarian thinker and an irrationalist whose obscure literary style stands in for a lack of systematic rigour Moir challenges these conceptions of Bloch by reconstructing the ontological epistemological and political dimensions of his speculative materialism Through a close historically contextualised reading of Bloch s major work of ontology *Das Materialismusproblem seine Geschichte und Substanz* The Materialism Problem its History and Substance Moir presents Bloch as one of the twentieth century s most significant critical thinkers

*Rethinking Cultural-Historical Theory* Manolis Dafermos, 2018-05-17 This book is an exploration of science in the making It offers readers the opportunity to

critically reflect on the process of development of Vygotsky's research program from the perspective of dialectics focusing on the dramatic process of building and rebuilding cultural historical theory Vygotsky's creative and dramatic journey is no less important than the concrete results of his research An epistemological and historical investigation of the formulation of cultural historical theory sheds light on the process of knowledge production and reveals hidden dimensions of creativity in science
