New Drugs Concepts And Results In Cancer Chemotherapy:

New Drugs, Concepts and Results in Cancer Chemotherapy Franco M. Muggia, 2012-12-06 New Drugs, Concepts and Results in Cancer Chemotherapy Franco M Muggia, 1991-10-31 Cancer Therapeutics Beverly A. Teicher, 1996-12-03 Cancer drug discovery has been and continues to be a process of ingenuity serendipity and dogged determination In an effort to develop and discover better therapies against cancer investigators all over the world have increased our knowledge of cell biology biochemistry and molecular biology The goal has been to define therapeutically exploitable differences between normal and malignant cells The result has been an increased understanding of cellular and whole organism biology and an increased respect for the flexibility and resiliency of biologically systems Thus as some new therapeutic targets have been defined and new therapeutic strategies have been attempted so have some new biological hurdles resulting from tumor evasion of the intended therapeutic attack been discovered Historically anticancer drugs have originated from all available chemical sources Synthetic molecules from the chemical industry especially dyestuffs and warfare agents and natural products from plants microbes and fungi have all been potential sources of pharmaceuticals including anticancer agents There is no shortage of molecules the challenge has been and continues to be methods of identifying molecules that have the potential to be therapeutically important in human malignant disease Screening remains the most important and most controversial method in cancer drug discovery In vitro screens have generally focused on cytotoxicity and have identified several highly cytotoxic molecules Other endpoints available in vitro are inhibition of proliferation 3 inhibition of H thymidine incorporation into DNA and various viability assays based most frequently on dye exclusion or metabolism Advances in Allogeneic Hematopoietic Stem Cell Transplantation Richard K. Burt, Mary M. Brush, 2012-11-28 The field of hematopoietic stem cell transplantation is rapidly evolving Realization that hematopoietic stem cells give rise to the immune compartment has resulted in clinical trials of hematopoietic stem cell transplantation for patients with autoimmune diseases Allogeneic hematopoietic transplants are a form of adoptive immunotherapy resulting in beneficial graft versus tumor effects Large numbers of hematopoietic cells can be collected with ease Therefore a renewable source of cells for ex vivo genetic manipulations is readily available Multiple trials combining hematopoietic transplants and gene therapy are in progress One such application is the infusion of allogeneic lymphocytes containing a suicide gene to abort graft versus host disease Hematopoietic stem cell transplantation is in reality the clinical and practical application of cellular therapy Hematopoietic transplant physicians are by design or by practical application evolving into cell and gene therapy specialists The excitement and enthusiasm in hematopoietic transplantation is that it offers a door to the future A future not of drugs or titrating poisonous chemotherapy but rather of cellular and gene therapy 1 ALLOGENEIC PERIPHERAL BLOOD STEM CELL TRANSPLANTATION FOR HEMATOLOGIC DISEASES Martin Korbiling University of Texas MD Anderson Cancer Center Houston Texas 77030 INTRODUCTION Circulating hematopoietic stem cells have emerged as

an alternative to bone marrow BM stem cells for allografting For many years the reconstitutive potential of circulating stem cells was questioned peripheral blood stem cells PBSC were even characterized a waste product 1 **Recent Advances in**

Clinical Trial Design and Analysis Peter F. Thall,2012-12-06 Clinical trials have two purposes to treat the patients in the trial and to obtain information which increases our understanding of the disease and especially how patients respond to treatment Statistical design provides a means to achieve both these aims while statistical data analysis provides methods for extracting useful information from the trial data Recent advances in statistical computing have enabled statisticians to implement very rapidly a broad array of methods which previously were either impractical or impossible Biostatisticians are now able to provide much greater support to medical researchers working in both clinical and laboratory settings As our collective toolkit of techniques for analyzing data has grown it has become increasingly difficult for biostatisticians to keep up with all the developments in our own field Recent Advances in Clinical Trial Design and Analysis brings together biostatisticians doing cutting edge research and explains some of the more recent developments in biostatistics to clinicians and scientists who work in clinical trials Diagnostic and Therapeutic Advances in Hematologic Malignancies Martin S.

Tallman,Leo I. Gordon,2007-11-23 There is no field of medicine in which advances in therapy have been so closely linked to a better understanding of molecular medicine than in the area of hematologic malignancies Diagnostic and Therapeutic Advances in Hematologic Malignancies will provide practitioners and academic clinicians with a better understanding of the constant evolving concepts in this area **Anticancer Drug Resistance** Lori J. Goldstein,Robert F. Ozols,2012-12-06 Over the last 50 years drug development and clinical trials have resulted in successful complete responses in diseases such as childhood leukemia testicular cancer and Hodgkin s disease We are still however confronted with over 500 000 cancer related deaths per year Clearly the phenomenon of drug resistance is largely responsible for these failures and continues to be an area of active investigation Since the last volume in this series we have learned that the energy dependent drug efflux protein p glycoprotein encoded by the MDR 1 gene is a member of a family of structurally related transport polypeptides thus allowing us to explore the relationship between structure and function In addition to ongoing well designed clinical trials aimed at reversing MDR mediated drug resistance the first gene therapy studies with the MDR 1 gene retrovirally transduced into human bone marrow cells are about to be initiated Although MDR is currently the most understood mechanism of drug resistance we are uncovering increasing knowledge of alternative molecular and biochemical mechanisms of drug resistance to antimetabolites cisplatin and alkylating agents and developing new strategies for circumventing such resistance It is clear that drug resistance is complex and many mechanisms exist by which cancer cells may overcome the cytotoxicity of our known chemotherapeutic agents As our understanding of each of these mechanisms expands well designed models will be necessary to test laboratory hypotheses and determine their relationship to drug resistance in humans It is this integration of basic science and clinical investigation that will both advance our scientific

knowledge and result in the improvement of cancer therapy

Surgical Oncology Raphael E. Pollock, 2012-12-06 Among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism. Card carrying surgical oncologists are certified by the American Board of Surgery as are all other general surgeons. What distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques. This different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems. Equipped with this perspective the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient. As a central theme the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting. This fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level. And although the primary tumor may be controllable by surgery with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival. The other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control.

Advances in Radiation Therapy Bharat B. Mittal, James A. Purdy, K.K. Ang, 2012-12-06 Recent advances in radiation oncology have depended upon and are intertwined with subsequent scientific discoveries and the development of new techniques in the fields of radiation and molecular biology, physics, electrical engineering, surgery and medical oncology. This volume describes how some of the recent discoveries in the radiological sciences have influenced the way radiation oncology is practised. As there are many advances in this field the Editors have chosen to concentrate on selected topics in clinical radiotherapy, radiation physics and biology and technical innovations that have had a major impact on radiation oncology in the past twenty years. It is hoped that the techniques described in this volume will increase tumor control and prolong patient survival and at the same time decrease radiation induced side effects and complications.

Diagnostic and Therapeutic Advances in Pediatric Oncology David O. Walterhouse, Susan L. Cohn, 2012-12-06 The purpose of Diagnostic and Therapeutic Advances in Pediatric Oncology for the Cancer Treatment and Research Series is to provide an up to date summary of how recent advances in cancer research are being applied to the care of children with solid tumors. The interface of cancer research with clinical practice in pediatric oncology has never been more intimate than today. While researchers are identifying oncogenes and tumor suppressor genes and are studying their specific functions, clinicians are using knowledge of oncogenes and tumor suppressor genes for diagnosing cancer in children for therapeutic decision making purposes and for prognostic purposes. The first three chapters in this book describe models for understanding the causes of childhood cancer that were perhaps initially identified by clinicians and that are now being studied and understood by

researchers These chapters will describe research evidence that supports roles for the involvement of normal developmental regulatory genes in childhood oncogenesis of abnormal immune regulation in childhood oncogenesis and of heredity in childhood oncogenesis The next eight chapters are devoted to descriptions of the application of new research developments to clinical practice with reference to the most common forms of solid tumors of childhood outside the central nervous system The final chapter will describe late effects of childhood cancer and its therapy and the impact research is having on understanding and perhaps preventing these late effects

Cancer Chemotherapy Reports, 1974-03 **Drug Resistance** William N. Hait, 2012-12-06 Resistance to treatment represents the final common outcome for far too many patients with cancer Even our most promising new drugs fall victim to drug resistance Hormones and newer biological therapies though safe and active also lose their activity over time In this volume of Drug Resistance leading investigators in the field have reviewed the most basic mechanisms of drug resistance and have proposed ways to modulate resistance This comprehensive volume should be of value for basic and clinical scientists who wish to delve more deeply into this intriguing problem in the laboratory and devastating problem in the clinic *Gastrointestinal Oncology* A. B. Benson, 2012-12-06 Gastrointestinal tract malignancies encompass a spectrum of diseases with marked differences in etiology incidence biological behavior and treatment outcome The incidence of new gastrointestinal cases recorded yearly for patients residing in the United States is approximately 230 000 representing nearly 20% of all cancer cases Worldwide gastrointestinal malignancies are responsible for the largest number of cancer deaths particularly because of the high incidence of hepatocellular and gastric cancer in other countries *Gastrointestinal Oncology* is directed to those most involved in the multidisciplinary approach to the gastrointestinal cancer patient including medical radiation and surgical oncologists gastroenterologists interventional radiologists pathologists oncology nurses and oncology physicians in training **Genes, Oncogenes, and Hormones** Robert B. Dickson, Marc E. Lippman, 1992-10-31 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered *Cancer Treatment and Research* is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic

on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more *Technical and Biological Components of Marrow Transplantation* C. Dean Buckner, Reginald Clift, 1995-08-31 *Technical and Biological Components of Marrow Transplantation* presents up to date information on the scientific and technological advances that will extend and improve the clinical application of bone marrow transplantation The book includes the latest information on chronic myeloid leukemia and thalassemia advances in supportive care cytokines and progenitor expansion and cord stem cell technology Soon more of patients will receive marrow transplants as part of the therapy for solid tumors and metabolic disease than for the treatment of hematologic disease The contributors to this volume describe some of these applications hinting at yet further exciting possibilities **Peritoneal Carcinomatosis: Principles of Management** Paul H.

Sugarbaker, 2012-12-06 Paul Sugarbaker and his colleagues have persevered in the study and treatment of peritoneal carcinomatosis The peritoneal cavity has many unique and incompletely appreciated properties These properties coupled with the biologic behavior of many cancers results in the seeding and growth of these cancers on the peritoneum Many of these cancers remain localized to the peritoneum only never metastasizing to other sites One possible reason for this may be the obstruction of the afferent lymphatics on the undersurface of the diaphragm The mucopolysaccharides produced by many of these neoplasms are probably viscous enough to obstruct these lymphatics leading to the syndrome of pseudomyxoma peritonei Many of the neoplasms taking residence on the peritoneum have extremely long cell cycle times and are resistant to radiotherapy and many chemotherapeutic agents How ever much can be done for these patients resection of primary cancers omentectomies to reduce ascites formation management of recurrent ascites management of intestinal obstruction nutritional care and hopefully intraperitoneal chemotherapy We have reviewed many of these problems in the past 17 Dr Sugarbaker and his colleagues have organized the current state of knowledge and technology for continuing use The book provides a basis for thoughtful prospective research planning John S Spratt M D F A C S Professor of Surgery The James Graham Brown Cancer Center University of Louisville Louisville Kentucky References 1 Long RTL Spratt JS Dowling E

Current Medicinal Chemistry , 1998-02 Leukemia: Advances in Research and Treatment Emil J. Freireich, Hagop Kantarjian, 1993-03-31 Leukemia continues to offer the scientist a unique opportunity to gain new knowledge about the malignant transformation As a result this multi authored volume devoted to advances which have occurred over the last seven years provides the reader with an important new understanding of leukemia but perhaps even more important predicts analogous new developments in the other malignant diagnoses In this respect this volume represents the cutting edge of cancer research This text is unique in that it includes in a single volume the leading contributors to their respective fields covering what the editors feel are the major advances in our knowledge of the biology and therapy of leukemia over the last seven years **Current Pharmaceutical Design** , 1996-06 **Gynecologic Oncology** Robert F. Ozols, 2013-03-14 In

recent years there have been major advances in the treatment of patients with gynecologic malignancies Perhaps the biggest advances have been in the area of ovarian cancer Gynecologic Oncology focuses primarily upon this malignancy This volume discusses cytoreductive surgery screening for ovarian cancer chemotherapy new chemotherapeutic drugs the controversy regarding the role of high dose chemotherapy in gynecologic cancers the hereditary basis for gynecologic malignancies molecular genetics molecular biology and new biologic therapies Other topics covered are the treatment of all stages of cervical cancer including radiotherapy In addition a chapter on advances in the pathology of gynecologic cancers is included The advances made in the treatment of gynecologic malignancies are due in part to the clinical studies performed by many of the contributors to this volume Clinical advances have been the result of multidisciplinary approaches which involve molecular biologists pathologists radiation therapists surgeons and chemotherapists Future advances will continue to rely upon collaborative interaction among these different disciplines
