Nitrosamines and Related N-Nitroso Compounds; Chemistry and Biochemistry (ACS Symposium Series 553). RN Loeppky (Ed),1994 **Nitrosamines and Related N-nitroso Compounds** ,1994 *Nitrite Curing of Meat* Ronald B. Pegg,Fereidoon Shahidi,2008-06-02 Meat has been treated for centuries with rock salt as a means of preservation However only one century has passed since the German researchers Polenske in 1891 Kishalt in 1899 and Lehmann in 1899 discovered that the active component in the curing process was nitrite Soon after the role of nitrite as a meat curing agent was revealed government regulators placed guidelines on the level of nitrite and nitrate permitted for use in cured meat formulations In the late 1960s and early 1970s the development of the so called nitrite problem surfaced because of the detection of N nitrosamines in processed meats The industry was in an uproar and the issue was of paramount interest to scientists and the public A major technical advance in the analytical technique for N nitrosamine detection was achieved when Thermo Electron of Waltham Massachusetts introduced the thermal energy analyzer TEA This unit allowed the screening of a large number of samples for nitrosamine with only a minimum preparation The role of nitrite in revealing the desired and unique flavor of cured products perhaps by suppressing the formation of lipid oxidation products was another development in revealing other properties of nitrite Above all the antimicrobial role of nitrite together with salt had a major influence on the popularity of nitrite nitrate in food preservation This book provides a review of the desirable attributes which sodium nitrite confers to meat during processing as well as drawbacks of nitrite usage i e the presence of N nitrosoamines In addition solutions for the curing of meat without the use of nitrite are presented An examination of a multicomponent nitrite free curing system entailing the color flavor and microbial protection of such a system is given

Biological Reactive Intermediates V Robert R. Snyder,James J. Kocsis,I. Glenn Sipes,George F. Kalf,David J. Jollow,Helmut Greim,Terrence J. Monks,Charlotte M. Witmer,2013-11-21 Much of organic chemistry is based on the ability of suitably structured chemicals to bind together through the formation of covalent bonds Biochemistry is replete with examples of enzymatically catalyzed reactions in which normal body constituents can be linked through covalent bonds during the

process of intermediary metabolism The finding that xenobiotic chemicals that enter the body from the environment are metabolized to highly reactive species and then covalently react with cellular macromolecules to induce toxic and carcinogenic effects was an observation that spawned the research featured in the Fifth International Symposium on Biological Reactive Intermediates BRI V The group of investigators that became fascinated with this process and its significance in terms of human health began their discussions in Turku Finland J 975 and continued them at Guildford England 1980 College Park Maryland 1985 Tucson Arizona 1990 and Munich Germany 1995 Among the results were a series of reports listed below as well as the book for which this serves as the Preface Jollow DJ Kocsis J J Snyder R and Vainio H eds Biological Reactive Intermediates Formation Toxicity and Inactivation Plenum Press NY 1975 Snyder R Park D V Kocsis J J Jollow D V Gibson G G and Witmer C M eds Biological Reactive Intermediates II Chemical Mechanisms and Biological Effects Plenum Press N Y 1982 Smoke-related N-nitroso Compounds in Cured Meat Systems Arun Kumar Mandagere,1986
